## **Introduction**

The Strategic Issues and Priorities consultation was carried out between 15 February 2021 and 12 April 2021. The consultation was carried out online using [Citizen space](#). The Strategic Issues and Priorities document focussed on 9 key issues:

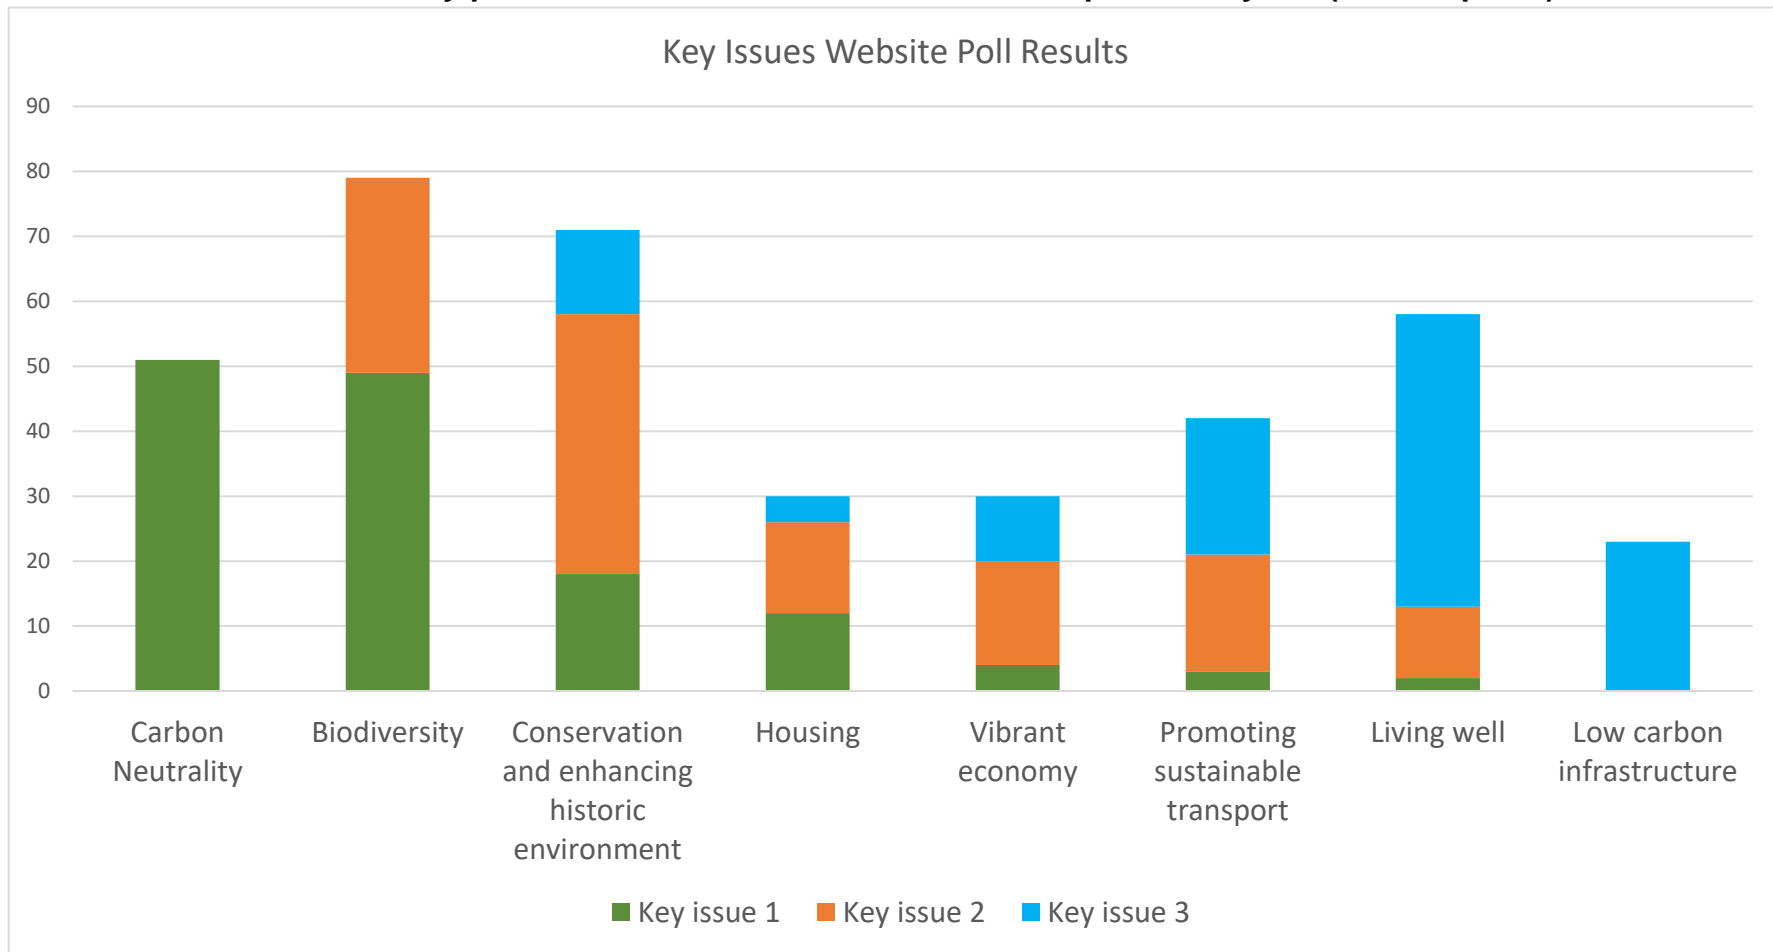

- 1) Carbon neutrality
- 2) Biodiversity and the natural environment
- 3) Conserving and enhancing the historic environment
- 4) Homes for all
- 5) Creating a vibrant economy
- 6) Promoting sustainable transport
- 7) Living well
- 8) Low carbon infrastructure and local Plan viability
- 9) Delivery and success of the Local Plan

For each issue, a range of questions were presented. Stakeholders were invited to submit their comments to identify their top priorities to accommodate sustainable growth across the district. This document details the responses to the questions received. The responses to the consultation were received through Citizenspace, via email or letter and through social media. Online events were also held where participants were able to vote using slido software, the responses to these are also detailed in this document.

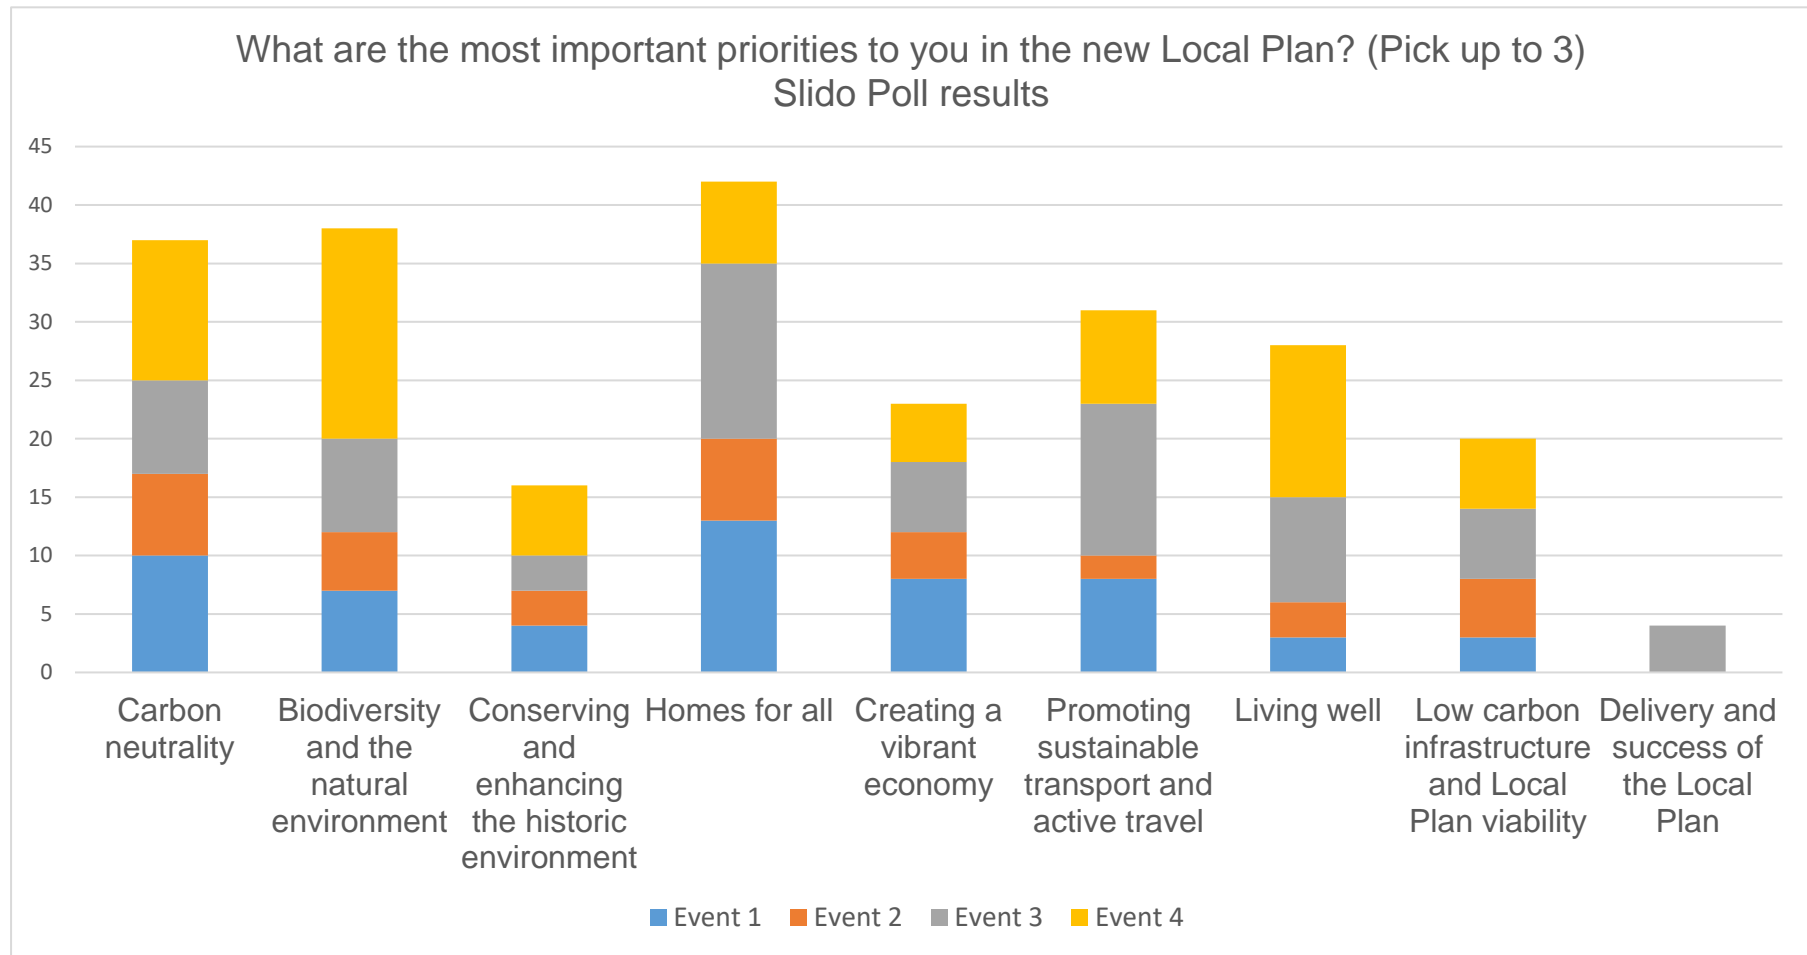

Any comments by a participant who did not want their comments published have been removed from the document.

## Current Visions

Have Your Say poll result - What issues are the most important to you? (Select up to 3)

**Slido poll result from consultation events – What are the most important priorities to you in the new Local Plan? (Pick up to 3)**

**Twitter poll results – Which of these issues is important to you?**

**1: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan?**

**Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan**

Option	Citizenspace
Yes	205
No	184
Not Answered	214

**What, if anything needs to be changed?**

Respondent number	Respondent comment
C1	We need to recognise the climate emergency and <b>develop policies that include energy conservation and energy generation</b> and storage in the right place and framework.
C3	<b>Protection</b> needs to be considered for the <b>rural landscape that lies to the north and west of Winchester</b> . This area has a distinct rural identity as well as internationally significant biodiversity in its chalkstream habitats (the rivers Test, Dever, Itchen). These areas deserve to be considered for <b>special environmental designation/protection at least as an AONB</b> .
C4	It <b>needs a much stronger statement</b> that puts the journey <b>towards carbon neutrality</b> at the heart of the way the District will develop over the next 15 years - how that will change the feel of the District - the relationship between urban and rural areas and the new infrastructure that will come to the fore.
C5	More emphasis on Winchester taking the bulk of any required housing. The majority of those who work in the city cannot afford to live in the city. The towns and larger villages have seen enough development. The <b>smaller villages</b> have not been allowed any <b>development</b> and are crying out for some <b>so that the village young people have somewhere to live</b> . This is particularly true in the SDNP.
C8	Forget climate change. <b>There is no climate emergency</b> . It is ideological propaganda. A small rise in temperature over the next eighty years is not an emergency. There are decades to adjust human response without crippling our way of life and impoverishing developing countries.
C9	It should highlight that interwoven across the vision is the need to accept there is a <b>climate crisis</b> and that this <b>should be at the forefront of all action</b> .
C15	It needs to plan for the future, namely climate change and all the impacts we are already experiencing such as flooding, pandemics, loss of wildlife habitat and the natural services systems provided by wild species (for example: pollination of food crops, aeration of soil). <b>Resilience should not be just physical (eg flood prevention, water conservation through SuDS etc) but also reducing food chains</b> . Diversification of the economy of the city should also include bringing food shops into the city centre and reducing food supply chains so that we can eat <b>locally grown, seasonal food</b> . Equally in the towns and villages. This would create <b>"Green " jobs for local people</b> . Light industry eg producing housing retrofit and solar products would also be welcome.
C21	The <b>rural gap north of Winchester</b> must be respected and <b>conserved</b>

C23	It needs updating to reflect whatever development strategy is chosen for the new Local Plan, the role of the District within the sub-region and region, and to <b>provide more consideration of the District's countryside and rural economy not just the settlements.</b>
C26	<b>Less houses for Denmead</b>
C27	A major omission from the plan is <b>consideration of the transport infrastructure.</b> It may well be that this is the responsibility of HCC but no plan with an emphasis on climate emergency priorities can be separated from the main channel of pollution - traffic. In order to meet the carbon zero target in 2030 there <b>must be some joined up[ planning g provision in conjunction with HCC to reduce traffic volumes</b> in addition to dealing with traffic congestion that already blights the area
C31	The comment has been removed as the respondent requested their response not to be published
C32	<b>The areas for considered for development should exclusively be grey field or worse.</b> The need for convenience should not enable green field conversion, people will need <b>better transport links</b> to balance grey field use and jobs.
C33	1) t needs to include a <b>clear environmental statement around carbon offset and climate change</b> and what we need to achieve not only local but also nationally and globally. In addition what we must achieve by 2030 and 2050. On top of this there must be a statement about preserving and improving our eco system as this is critical to preserving the diversity required to protect all our and future generations wellbeing. The vision is short term in its nature and not about the long-term future 2) There also needs to be something about <b>the developers having a long-term stake in the future of the community.</b> Too often we are seeing with gladding debacle that it is all about short term profit and walking away from long-term liabilities.
C35	<b>Focusing on brown sites and protect the green ones</b>
C36	I agree with all of the objectives . 1. Fundamental to soundness is <b>sharing of overspill development</b> from National park, Gosport, Havant, Portsmouth & Eastleigh with WCC with efficient use of land per SA12 in all of these. 2. There is <b>huge backlog of housing provision.</b> There is no objective to eliminate it. 3 The <b>backlog has resulted in gross overcrowding</b> by 2 households living in dwellings with insufficient bedrooms making it the very top plan issue because of its <b>impact on mental health</b> particularly of the poorest in the smallest dwellings.

	<p>4. This can be done in a way that contributes to sustainability by <b>top quality high rise catering for the poorest &amp; those trading down</b> thus also releasing under utilised dwellings to accommodate growing families. Manage by a residents' committee to make it an economically mixed community. Include gym, hairdresser &amp; nail bar for residents also open to the public, Set in landscaped open space large enough to include facilities for all ages also open to the public . If located at the settlement edge the size of the community would be enough to attract rural &amp; inter urban buses.</p> <p>The Winchester Town Forum document is not being consulted on &amp; thus not part of this local plan submission</p>
C37	<p>As long as the definition of a village remains the same, there needs to be <b>defined boundaries and a push towards more local and small businesses</b> that benefit the local economy</p>
C39	<p>The <b>Villages and Rural Areas, need to be able to grow over the plan period.</b> Currently they are exempt from extending their settlement boundaries. This could be a percentage of the existing settlement over three to five years.</p>
C40	<p>The <b>community and environment need to take priority over economy.</b> The capitalist drive for GDP wealth is widening the gap between rich and poor and doing long term damage to the city and its surroundings.</p>
C42	<p>This is a special place to live in and I think that <b>the basic identification of the three types of settlements within the district</b> is a sound basis for looking at how the 9 focuses identified could be applied in different ways to each group. They <b>all have distinctive characteristics and needs.</b></p>
C44	<p><b>Greater emphasis on regeneration of brown field land rather than developing greenfield land around villages.</b> Especially given the likely changes to retail space following the pandemic and <b>acceleration of online shopping freeing up space that can be repurposed.</b></p>
C49	<p>The <b>villages near to Waterlooville need to remain villages.</b> They have had too much development already &amp; are in danger of becoming over run for their facilities.</p>
C53	<p>Incorporating a <b>Green Belt</b></p>
C54	<p>It is remarkable that the existing Core Strategy Vision takes no account of <b>climate change; this should now be included in the Vision.</b> I entirely agree that the new Local Plan '... needs to be prepared through the climate change lens and reflect the need to zero carbon sustainable development'. On the other hand <b>the recent impacts of Covid-19</b> are likely to diminish over time and <b>should not substantially influence the development of any long-term plan</b> unless they concurrently meet climate change objectives e.g. more working from home which reduces commuting.</p>
C57	<p>Given the need for national resilience following Brexit and the shock of Covid-19, <b>greater emphasis</b> should be placed upon the following:</p>

	<p><b>Local agriculture for the purposes of food-production</b>  <b>Appropriate use of brownfield sites with existing urban and industrial landscapes</b></p>
C58	<p>The pandemic has <b>reduced the need to develop office accommodation</b>. The <b>impact of the pandemic and growth of online retailers on businesses in the town center and high street</b> requires urgent attention. <b>House building by large and medium sized developers should go hand in hand with opportunities for self-build.</b></p>
C59	<p>A reflection on the impact that the COVID pandemic has had on how our <b>working lives have changed and the flexible home working option</b> that will likely become the norm over the next few years</p>
C60	<p>The massive <b>change in retail, and the use of retail areas</b></p> <p>The rising <b>unaffordability of housing for singles and young families</b>, and the need to for not only a local first policy, but a <b>substantial sub "affordable" category of housing</b>, especially in planning - as there is in the south down nation park.</p>
C63	<p>The "rich historical and cultural heritage and attractive countryside" of the City is rightly emphasised but it should be stressed that, <b>historically and visually, Winchester is of unique national, and indeed European, significance</b>. An aspect of this is its openness to its rural setting, which is unusual compared with other historic locations, even those of comparable size. This is particularly true of the sweep around the city from Compton to Littleton. Much of the landscape here is also of exceptional quality.</p>
C73	<p><b>Stronger protection for valuable green spaces surrounding Winchester, Oliver's Battery and Hursley.</b></p>
C75	<p><b>Needs to include a statement to support the Government's target of requiring the UK to bring all greenhouse gas emissions to net zero by 2050.</b></p>
C76	<p>The climate change challenge needs to be reflected in the vision. Therefore a vision that also recognizes more explicitly the three tenants of a <b>sustainable future Environmental , Social and Economic and the importance of pursuing these in a balanced way</b>.</p> <p>Approaches driven by single issues tend to lead to unforeseen consequences in the long term, the vision must be to avoid these unforeseen consequences at all costs.</p>
C79	<p>No, it needs re-drafting:          In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).          At its heart should be <b>sustainable new development</b>, which is the proper business of a Local Plan.          The other elements (<b>Climate Change, Protection of countryside, Biodiversity, Natural Environment etc.</b>)</p>

	<p><b>should be tackled in relation to this.</b>  <b>Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</b>  <b>A coherent and consistent Vision for the whole District should be created.</b> From this, <b>objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view.</b></p>
C84	<b>Spelling</b> of contours on page 32 of the LIFETIMES handbook and others!
C87	Needs redrafting as <b>Covid</b> has changed everything. We need <b>more housing and fewer shops in the city centre</b> and it all needs to be <b>sustainable</b> .
C88	Needs re-drafting cos we face new challenges. It should be about <b>sustainable development</b> .
C91	<p>MICHELDEVER STATION.                  You <b>should not be thinking of building on greenfield sites</b>.</p> <p>You should not be causing environmental harm by creating a new town on over 1000 acres of farm land. See my General Comment at the end of this questionnaire.</p>
C93	In the <b>third section on market towns and villages the words "offering where possible" should be deleted and the words " which may where deemed desirable by the inhabitants offer" substituted,</b> Not all towns and villages want too many facilities and development.
C99	I am really concerned about how much 'extending' of communities is going on. <b>Brown field sites should be used to maximum capacity first</b>
C101	<p>It should not just be the "southern fringes" that provide homes etc. <b>Homes should be created where there is genuine need</b>, that should be the vision, not simply because a village can "absorb 1000 homes" for example. There is already too much development around Waterlooville, Denmead, and North of Fareham. Growth in response to "local needs" should not mean those needs, especially housing, are dictated by Winchester. Denmead is NOT a town, but uncontrolled development will lead to it merging with Waterlooville, which is NOT acceptable. Winchester diktats mean <b>Denmead is losing its identity</b> already. Denmead is a village. I have lived here since 1988.</p> <p>Consultants sit at their desks and create artificial statistics to support their vision. It says " whilst retaining their individual identity and rural character.", but that has not happened so far. Denmead has been a convenient locale to dump too many homes.</p>

C105	The comment has been removed as the respondent requested their response not to be published
C111	We are now <b>living in a very different world and the Plan needs to recognise those changes</b> , and that they will change all the faster as time moves on. We have had a Covid Pandemic (continuing), Brexit, major changes in retail, Climate Change issues affecting inter alia, transportation in all forms and much more. The Plan needs to address these issues even if it cannot see answers to them at present.
C113	<b>More emphasis on sustainable growth within the villages</b> eg. Olivers Battery A site specific allocation is being advocated and a separate report will be submitted.
C114	However, we need to <b>protect the existing locations from over development</b> , particularly where the current infrastructure is barely adequate in busy times,. In particular, traffic into and out of Winchester probably exceeds the pollution targets by many times.
C116	The comment has been removed as the respondent requested their response not to be published
C117	The vision is fine. What people really want is <ol style="list-style-type: none"> <li>1. <b>No potholes in the road</b></li> <li>2. <b>Easier access to skips</b> - the present system encourages people to fly tip. The booking system should be stopped and it should revert to the system pre-pandemic. Garden waste should be collected free. Large waste should also be collected free.</li> </ol>
C118	In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street). The scale of the <b>environmental crisis</b> we face is vast and dwarfs the issues posed by Covid. <b>Only transformative changes will be sufficient.</b> <ul style="list-style-type: none"> <li>• At its heart should be <b>sustainable new development</b>, which is the proper business of a Local Plan.</li> <li>• The other elements (Climate Change, Protection of countryside, Biodiversity, Natural Environment etc.) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</li> <li>• A <b>coherent and consistent Vision for the whole District</b> should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view.</li> </ul>
C119	the plan needs to address <b>sustainable new development and elements such as protection of countryside need to be taken into account.</b>

	<p>Delivery of a sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</p> <p>A <b>coherent and consistent Vision</b> for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and <b>avoiding a “Winchester-centric” view.</b></p>
C121	<b>Ensure that spatial strategy is reflected in all 3 points of the vision.</b>
C123	<b>Include overarching theme of carbon neutrality</b>
C130	A re-think post Covid and social needs and changing lifestyles
<b>C132</b>	The comment has been removed as the respondent requested their response not to be published
C136	The local planned defined settlement boundaries. and also defined other areas that were not sustainable. However <b>since 2011 a lot of houses have been built against this Policy</b> , these do not add to the overall figures
C138	The <b>vision in the current Local Plan is not appropriate for inclusion in the new Local Plan</b> , as it was drafted some years ago and does not represent a realistic and up to date outlook reflecting the challenges we now face and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district.
C140	Proposed developments in olivers battery
C144	<p>No It <b>needs to be rewritten</b></p> <p>The plan needs to reflect the whole District and so far looks too Winchester Centric . it needs to show flexibility and recognition the we live in a changing world. Local distinctiveness is key to a successful plan.</p> <p>Too much emphasis on Climate Change with no indication on how that will be managed.</p>
C146	nothing included about <b>brownfield sites</b>
C149	An overriding <b>commitment to sustainable, environmentally designed development with a fresh look at the impact Covid may have</b> had on the way in which we work and on the retail, high street environment. It has emphasised how much we need green space where we live and not just by driving elsewhere.
C155	The council should <b>explicitly include the commitment to protect the city's green spaces and surrounding countryside</b> with the implementation of a Green Belt for the city. This will prevent urban sprawl and preserve

	the character of local villages such as Hursley (which are threatened by major development proposals at Royal Down and South Winchester Golf Course). This is also <b>in line with the commitment to carbon neutrality</b> and will protect valuable wildlife habitats and green spaces for the enjoyment of future generations.
C156	The council and the local planning authority must recognise <b>the value of trees, woodlands and hedgerows</b> which bring environmental, social and economic benefits providing amenity value and benefits beyond contributing to the <b>character and identity of varied landscapes</b> . The council must firmly commit to maintaining and enhancing the districts trees and woodlands.
C160	<p>The <b>climate emergency must determine how far the 2013 vision remains applicable</b>. With transport contributing 46% of the district's carbon footprint (70% if motorways are included), <b>commuting must be reduced</b>, so the current sprinkling of houses creating commuter dumps across the whole district needs to end. At the same time, market towns and villages in the rural area must (as in 2013) 'be allowed to grow to respond to local needs, whilst retaining their individual identity and rural character'. Windfall sites and occasional exception sites for affordable housing would probably meet this need.</p> <p><b>Resilient communities that self-organise and work together, with energy from large-scale renewable projects (Carbon Neutrality Action Plan), must be planned in: they cannot be retro-fitted, especially across scattered villages and small market towns.</b></p> <p>The UK population has fallen by up to 1.3 million since 2019 (ESCOE study). More than half of those who have left the UK were aged 20-39 (Oxford study), i.e. those likely to be buying a first house. The COVID crisis has seen plummeting birth rates. Government policy is to clamp down on mass immigration. It follows that centrally imposed housing numbers based on over-estimated national targets must be rejected.</p> <p>The overall vision gives <b>insufficient emphasis to local shops, local industry and local schools</b> – all essential for the vision to be realised.</p>
C164	additional points are needed, <b>on increasing green spaces</b> , maintaining existing green field areas. <b>Protecting the environment and reducing CO2</b> . Also need to ensure new developments are sustainable and low CO2 impact (green initiatives etc)
C168	<p>The <b>climate emergency</b> must determine how far the 2013 vision remains applicable. With transport contributing 46% of the district's carbon footprint (70% if motorways are included), commuting must be reduced, so the current sprinkling of houses creating commuter dumps across the whole district needs to end. At the same time, market towns and villages in the rural area must (as in 2013) 'be allowed to grow to respond to local needs, whilst retaining their individual identity and rural character'. Windfall sites and occasional exception sites for affordable housing would probably meet this need.</p>

	<p><b>Resilient communities that self-organise and work together, with energy from large-scale renewable projects (Carbon Neutrality Action Plan), must be planned in: they cannot be retro-fitted, especially across scattered villages and small market towns.</b></p> <p>The UK population has fallen by up to 1.3 million since 2019 (ESCOE study). More than half of those who have left the UK were aged 20-39 (Oxford study), i.e. those likely to be buying a first house. The COVID crisis has seen plummeting birth rates. Government policy is to clamp down on mass immigration. It follows that centrally imposed housing numbers based on over-estimated national targets must be rejected.</p> <p>The overall vision gives insufficient emphasis to local shops, local industry and local schools – all essential for the vision to be realised.</p>
C170	<p>There are major problems with Permitted development and enforcement, should people not comply. There is <b>too much of a rush to allow development without due consideration to neighbours</b>, the community and the environment.</p> <p>Permitted development should be better controlled taking into account the effects of the development on neighbours and the local environment.</p>
C183	<b>Green belt</b> for south Winchester should be included
<b>C185</b>	The comment has been removed as the respondent requested their response not to be published
C186	<p>The vision <b>lacks clarity about the overarching principles for planning in the area and how they relate to the region within which the area sits</b>. The current three prongs are simply the local illumination of a more strategic principle which has never been clearly stated. As a result there is no coherence in the local plan which means that the impact of the numerous departures that have taken place since the plan was drafted can never properly be examined.</p>
C190	It needs to be adapted to include responses to <b>the climate emergency</b> and the <b>pandemic</b> .
C191	No more housing needed especially on green field sites. Barton Farm has only built 300 out of 2000. <b>Homes and jobs need to be built and created in the North</b> as per Government election pledge not in overcrowded Winchester.
C192	<p>The Vision needs re-drafting it does not reflect the views of the majority of the residents neither does it reflect the changing situation.</p> <p>These should be the key priorities:</p> <ol style="list-style-type: none"> <li>1. Hub and Spoke. There is too much focus on Winchester City centre and not enough on the outlying communities. <b>The City needs to be the hub but it needs to tie in with the outlying communities</b> (the spokes). That particularly applies to all the services that are provided (e.g. transport, health, education etc.).</li> </ol>

	<p><b>2. Promote Winchester’s identity.</b> You talk about it being a special place but I don't see the plan supporting that. Winchester is different from other cities. We must not turn it into a clone of all the others. That means, apart from other things, <b>encouraging small local businesses into the centre</b> and making it easier for people to visit those businesses (i.e. good transport, convenient free parking).</p> <p><b>3. Promote health and Well-being.</b> Covid has made us all realise how beneficial outside (green) space is. We mustn't endlessly build accommodation at the expense of recreational space.</p>
C194	There is no <b>focus on employment and business opportunities</b> . The existence of technology sector businesses in and adjacent to the Winchester District is vital for employment opportunities and start up business opportunities. There <b>needs to be much more focus on providing a good environment for those businesses and enabling the start ups to grow.</b>
C195	but <b>greenbelt</b> should be retained as greenbelt with settlement gaps, <b>housing development should happen on brownfield and previously developed land first.</b>
C197	In the County Town of Winchester <b>a much stronger emphasis needs to be placed on the quality of the environment and wellbeing of people</b> , set alongside the legitimate need to meet the future requirements for housing, community, and economic development. <b>Greater clarity is required on the future development of the University of Winchester, and the Royal County Hospital</b> - both of which are large employers but also have a <b>heavy impact footprint on traffic, parking, and pollution (including carbon, light, and noise)</b> . To date these institutions are not sufficiently taken account of in historic Local Plans.
C198	The vision looks OK as an overarching statement.
C199	Consideration of brown field sites
<b>C201</b>	The comment has been removed as the respondent requested their response not to be published
C208	Winchester needs a strategy to <b>protect gaps between settlements</b> , even when those settlements lie within the same civil parish.
C214	There is no mention of <b>Leisure and Sports in this vision</b> , which in my opinion is a glaring omission No mention of the <b>preservation of green belt protection.</b>
C215	I don't understand the geographical connection between Waterlooville and Whitely with Winchester. Surely they should be associated with other areas closer to them. There should be a greater adoption of the <a href="https://www.tcpa.org.uk/the-20-minute-neighbourhood">https://www.tcpa.org.uk/the-20-minute-neighbourhood</a> so as to minimise the cost associated with travel. This is consistent with <b>diversification of the town's economy</b> but is not compatible with, for example, the creation of a huge expensive sports hall on the edge of town - supposedly focussed on access by motorway.

C220	I don't know enough about the current local plan.
C224	THIS QUESTION TO START WITH! BUREAUCRATS SPEND THEIR LIVES DREAMING UP NEEDLESS OBJECTIVES AND SUPPORTING THEM WITH UNINTELLIGABLE LANGUAGE YOUR VISION IS TO SUPPORT THE TAX PAYER AND <b>PROVIDE AN ENVIRONMENT THAT MEETS THEIR NEEDS</b>
C225	I would like the land at <b>Five Oaks Farm</b> Sheffield S)322HS to <b>be designated as a local green space</b> in the Winchester district local plan 2018-2038 because I believe it <b>has beauty historic significance recreational value Tranquility and especially rich wildlife</b> and is an important settlement gap top the communities of Sheffield parish .
C226	No, it needs re-drafting: <ul style="list-style-type: none"> <li>• In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).</li> <li>• At its heart should be <b>sustainable new development</b>, which is the proper business of a Local Plan.</li> <li>• The other elements (Climate Change, Protection of countryside, Biodiversity, Natural Environment etc.) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</li> <li>• A coherent and consistent Vision for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, <b>retaining local character and individual focus</b> and avoiding a “Winchester-centric” view.</li> </ul>
C227	No, it needs re-drafting: <ul style="list-style-type: none"> <li>• In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).</li> <li>• At its heart should be sustainable new development, which is the proper business of a Local Plan.</li> <li>• The other elements (Climate Change, Protection of countryside, Biodiversity, Natural Environment etc.) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</li> </ul>

	<ul style="list-style-type: none"> <li>• A coherent and consistent Vision for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view.</li> </ul>
C231	<p>No, it needs re-drafting:</p> <ul style="list-style-type: none"> <li>• In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).</li> <li>• At its heart should be sustainable new development, which is the proper business of a Local Plan.</li> <li>• The other elements (Climate Change, Protection of countryside, Biodiversity, Natural Environment etc.) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</li> <li>• A coherent and consistent Vision for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view.</li> </ul> <p>Needs to emphasise the need for the towns and villages to retain their individual characters, rather than becoming a homogeneous group.</p>
C239	<p>Winchester City Council's aim of achieving <b>zero carbon emissions by 2030 is extremely ambitious and needs to be prioritised as far as possible.</b></p> <p>Over and above the housing requirements imposed by central governments, <b>Winchester city in particular does not need to grow:</b> it is already overcrowded and polluted.</p>
C241	<p>It needs to be redrafted.</p> <p>For example:</p> <p>Specific reference to Waterlooville and Whiteley should be removed. Surely <b>the need to provide homes, jobs, physical and social infrastructure whilst creating and retaining a strong sense of community identity and protecting nearby environmentally sensitive sites, to create extended communities is applicable to all areas.</b></p> <p>There is a need to add:</p> <p>All development <b>needs to be sustainable.</b></p> <p>The <b>protection and maintenance of green spaces</b> to provide accessible and open landscapes for recreation.</p> <p>The maintenance and enhancement of public rights of way. The support of the farming community, the encouragement of sustainable food production.</p>

	It needs to embrace the challenges brought about by leaving the EU, by <b>climate change and biodiversity</b> . In essence a coherent and consistent Vision for the whole district should be created. It needs to avoid the stereotyped previous approach.
C243	Complete reappraisal needed and <b>less urban-centric</b> . You tell us the Winchester Town Forum, supported by a team of consultants, have been working on producing a vision for the built up area of Winchester town, but is there an equivalent group working in parallel for the rural areas? <b>Protecting biodiversity</b> was a top priority amongst respondents at the recent consultation group (20th March) and preventing inappropriate land use and destruction of natural habitat are key factors to this goal.
C244	<b>More protection for the rural areas</b> , due to the inappropriate land use and destruction of natural habitat. More emphasis on the reduced development in nitrate vulnerable areas and surrounding countryside. More stringent policies are need on light pollution and Environmental Heath Pollutions. More attention devoted to the rural areas
C245	There should also be an objective to bring <b>inmate manufacturing into the city</b> , as a source of jobs for people with different skill sets.
C248	1. Further Consultations now that COVid and Lockdown has been with us since Jan 2020 . the effects of this matters should be more accurately assessed . 2. The view of the whole district needs consideration and not just Winchester . 3 . The <b>answers and aims of the Plan are based on a too small and selective proportion of participates and that needs widening</b>
C249	Areas within 'winchester' that have their characters currently protected by ' <b>Gaps</b> ' <b>should continue to have their character protected- not just 'Rural' Settlements</b> or else we end up with one massive development/urban sprawl that does not give any confidence that the current rural settlements will not be subsumed into the urban development in the future
C253	Much has changed since the Plan was drafted. It <b>needs re-drafting to reflect the current situation post Brexit, the Covid pandemic and changes in the High Street</b> . Sustainable residential new development, in particular within existing settlements and on <b>brownfield site should be prioritised</b> over development within green field land and open spaces. The housing numbers stated as being required, seem to be far in excess of those likely to be required both during and well beyond the Plan period. A consistent and coherant vision for the whole District should be created, from which objectives can be stated to address specific issues in different parts of the District, <b>retaining local character and individual focus</b> and avoiding a "Winchester-centric" view.

C255	<p>The last year or so has seen substantial and domestic change. The global response to <b>Climate Change and the economic, social and behavioural change still being driven by the Covid Pandemic</b> should be addressed by a fresh perspective. For example the <b>move to a possible hybrid of home and office based work</b>.The significant <b>shift away from high street shopping to online</b> should lead to a fresh proposition to make the high street more exciting and relevant to people. The <b>increasingly challenging zero carbon goals being pursued should permeate every policy area of WCC</b>.</p> <p>Sustainable new development is key and delivery thereof should demonstrate NPPF and UN sustainable development goals. A COHERENT AND CONSISTENT VISION IS NEEDED NOT JUST FOR WINCHESTER BUT FOR THE WHOLE DISTRICT.</p>
C256	<p>The Local Plan needs to maintain as its <b>first priority the structure and characture of the Winchester area</b>. Development for developments save is not a priority and shoudl not be a drviing factor.</p>
C259	<p>There needs to be <b>more protection for current green field areas</b>, particularly where the local infrastructure, including roads, is inadequate for further housing development.</p> <p>There needs to be a specific intent to regenerate the city centre, where retail is in decline, and <b>accommodation in these central areas will help to regenerate urban centres</b> which are struggling.</p>
C260	<p>Agree that more <b>emphasis should be placed on the climate emergency</b> and the role of the Local Plan and planning system more generally to proactively address this whilst ensuring compatibility with the three pillars of sustainable development and particularly ongoing housing delivery to address the housing crisis.</p>
C262	<p>It needs redrafting. I don't feel that new sustainable development is central to this local plan-but merely creating the largest number of new homes it can. It seems to be ignoring <b>focus on climate change</b>, and the rapid <b>decline of our high street which so obviously makes available more brown field site development</b>.</p> <p>Climate change, protection of countryside, biodiversity, natural environments should be tackled alongside the local plan. This local plan should be following NPPF and UN sustainable development goals.</p>
C273	<p>"diversify its economy through the promotion of the knowledge, tourism, creative and education sectors"</p> <p>WCC has no basis for choosing winners in a future economy, as the current plan implies. In particular, the "education sector" in Winchester has no STEM base. The planning function is to provide a platform and an environment that encourages creativity, and that implies unexpected directions.</p> <p><b>Lobbying by current interests should be discounted with future time .</b></p>
C274	<p>1)We need to <b>REALLY look at the Brown field sites</b> ( so far we are told we don't have any/they cant be used for housing) . We need too lookat the use of the City Centre seeing 2)<b>FAR MORE imaginative use of car park space</b> with low rise buidling over it and reuse of office space with car parking underneath.</p>

	<p>3) We need to know what is the Winchester plan for <b>tree planting in light of the NEW National drive to plant trees</b>. I have NO IDEA where the plan to plant enough trees locally has looked at /considered. It wont just happen . It needs planning.</p> <p>4) The City Council needs to be <b>PRO ACTIVE in looking at land use</b> not wait around for building firms to acquire land and then make loads of decisions which go against the wishes of local people. Initiative should follow planning not run after developers.</p> <p>5) <b>Sites of SSI, Countryside parks and heritage landscapes should be identified in the Local Plan asnd be compulsarily included in any building firms applications as clear labelled outlines.</b> ( I was once present at a planning enquiry at WWC where the lead planner had no idea that the proposed development was NEXT DOOR to a butterfly reserve. )</p> <p><b>The needs of local people for free access to footpaths and open spaces should be quantified</b> in some way so that just as urban density is considered Countryside erosion and density is noted and considered. ( Locally )</p> <p>Unique ecology should be identified and treated in the UK and locally as we would hope Brazil will treat the Amazon. I am thinking here of the chalk downlands which are heavily thretened world wide in the Uk in Hampshire and in Winchester.</p>
C276	<p>The correct across the board housing needs have to constantly assessed and planned to be met <b>to include all forms of housing</b> - not just the huge profit £1M houses.</p> <p>When we are ill, require rescuing etc we urgently require people to help us that are not able to afford housing so we need more "social" / correctly priced housing for these groups.</p> <p>Plus we need to <b>burn through all the brown field sites first</b>. Not just plough up green fields because it is cheaper for building firms to make a quicker profit.</p> <p>We <b>also require transport plans that fit with more modern technology</b> (like electric scooters and bikes) these modern cheap devices will be used regardless of what the law says at present.</p> <p>The last mile of transport should begin to switch to and provide support for the newer technologies coming in. That probably means <b>changing the plans for infrastructure and traffic separation</b> sooner rather than later.</p> <p>Also the centers of towns and cities are changing fast as the recent past has shown with retail shops principally switching to on-line or disappearing altogether - providing another form of "brown" site housing development opportunities.</p>
C277	<p>Stronger protection for the countryside that lies between settlements in the southern parishes. 'Countryside' businesses such as quarries, equestrian sites with mobile homes, park homes developments and gypsy and</p>

	traveller sites are contrary to WCC's sustainability policies and should be planned for through the Local Plan process.
C278	<p>More protection against unlawful development and settlement (travellers) needs to be made available and upheld.</p> <p>I am from a small Hamlet that has been over run by travellers without planning permissions and a <b>construction company development which are not in character with this tiny Hamlet.</b></p> <p>Planning is ignored. <b>WCC should have more power to preserve our countryside</b> and its genuine residents. A Council solely responsible for the Meon Valley area would be more able to cater and protect this rural area rather than a major city council has has very different issues and priorities. I would certainly volunteer to be a Councillor.</p>
C279	It does not seem to respect the highly valued setting of the town as stated
C280	<p>The current vision in the local plan does not address the fact that the recent pandemic has changed peoples work patterns demonstrating to employers the benefits of working from home for both employees and employers. There will be no necessity in the future for employees to attend an office every day. Consequently future need for office parking will reduce, as will the need for office space. In addition the pandemic has exacerbated the decline of high street shopping. Online shopping habits have developed which are unlikely to reverse. This will inevitably lead to the closure of high street chain stores. <b>The local plan needs to promote the redevelopment of town centre carparks for housing.</b> All carparking should be on the outskirts with a <b>park and ride system.</b> This would reduce airborne pollution, noise and generally create more attractive urban spaces for leisure and relaxation. Likewise the local plan should promote the conversion of town centre redundant office buildings for housing. Independent shops, eateries, cultural and leisure amenities (safe cycling and walking areas) are the future for our urban centres together with the development of 'brownfield ' sites ( redundant retail and commercial premises) for residential use.</p>
C282	<p>Too many of <b>the Market Towns and Villages are loosing their character as a result of over development.</b></p> <p>There is no <b>public transport</b> to satisfy the needs of these new developments leading to more local car journeys for school runs, commuting and shopping in centres such as Southampton ,Winchester Portsmouth and out of town retail parks..</p> <p><b>Development should be planned in conjunction with an integrated public transport policy</b></p> <p>For example it is not possible to travel from developments such as Whitely ,Botley ,Bishops Waltham, Wickham by FREQUENT QUICK public transport to access mainline Railway stations or other parts of the county.</p>

C286	The <b>vision seems to be out-of-date</b> . There is no mention of the impact of climate change and the need to retain open spaces for recreation and sporting activities.
C287	The need to preserve local farmland and green areas.
C290	There is and has been far <b>too much housing being built which is swallowing up our countryside at a rapid rate</b> , destroying the habitat and the wildlife that live in it.
C291	The <b>vision was drafted some years ago and the challenges facing the District are significantly different today</b> , for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change, for instance assigning appropriate value to maintaining and increasing biodiversity to counter greenfield development. Furthermore the local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.
C292	The <b>whole Vision needs to be changed to be about sustainable development</b> . Urgent issues like climate change and the effects of Brexit need to be addressed. The pandemic has drastically changed working and living locations and behaviour and these will be permanently altered even post-Covid19. The high street is in decline and should be reworked to better reflect new ways of living and working, including using vacant office and retail space for housing and building high density housing (blocks) near to the city centre. There needs to be far greater provision for cyclists so they are able to cycle safely, particularly on busy roads such as Romsey Road and in the town centre. Well-positioned and numerous bike racks with CCTV should be installed.
C293	Broadly yes. The importance of the district retaining its distinctive characteristics remains appropriate, particularly recognition that rural villages should remain viable settlements offering a range of local services and facilities and being allowed to grow to respond to local needs, whilst retaining their individual identity and rural character.  The <b>strategy does though need to recognise that Covid -19 will change how we live our lives</b> and this has the potential to particularly impact on Winchester city centre through a reduction in commuting, use of office space and more online shopping. Ensuring a vibrant economy and community in Winchester will require additional focus, including the potential for more residential provision in Winchester as demand for other uses changes.
C298	The comment has been removed as the respondent requested their response not to be published

C299	<p>Consider how much development is possible while maintaining the quality of an historical small city. Consider how major new development can be compatible with available water resources, that is the limited capacity of the downland aquifers, also the disposal of wastewater. This is matter of <b>practicability over 'vision'</b>.</p>
C302	<p><b>More consideration to villages that are part in and part out of National South Downs Park</b> in terms of development burden, infrastructure etc</p>
C304	<p>In the light the evolution of the Covid 19 pandemic I believe paragraphs regarding <b>quick and easy access to a variety of outdoor, natural spaces for leisure and wellbeing should be inserted.</b> also some real determination, and concrete ideas to protect the environment , be sustainable and reduce global warming .</p>
C305	<p>Winchester needs <b>a strategy to protect gaps between settlements</b>, even when those settlements lie within the same civil parish.</p>
C309	<p><b>Since the vision in the existing Local Plan was set out, the path to the future has fundamentally changed.</b> Over the past few years, we as a nation have accepted our duty to deal with climate change immediately. This was signified locally by the current Winchester City Council administration declaring a climate emergency in June 2019, who set out the aim of carbon neutrality district wide by 2030. Since then the COVID-19 worldwide pandemic has seen significant changes to the way we live and work; including working from home and living more locally.</p> <p>These two changes pose a once in a generation opportunity to shape a new future. Many people will not go back to working in offices full time, likely with a split of working from home a few days a week and a couple days in an office. This has recently been announced by large employers such as BP who will make employees work from home at least two days a week. Other companies, such as Aviva, have put employees on working from home contracts permanently. Companies benefit as they can save on office space and the employees save time on their daily commute; resulting in less carbon emissions. The Local Plan must consider that many people will not be commuting into Winchester (from the market towns and villages) or out of Winchester to places like London anymore. These home-based workers will require local facilities near to their homes; like more local cafes and shops. There is also likely to be a push for a new model – working from near home or from 'Community-based Working Hubs'. For many reasons, not everyone has the space or ability to work from home so each community could have communal 'pay as you go' spaces for local workers to use for meetings, a desk to work from or a space to collaborate. Working from / near home will reduce the number of commuters, which</p>

	<p>will help with the climate crisis so these new forms of working should be encouraged.</p> <p>Considering the above, the Local Plan needs to productively work towards this change rather than be set in the old ways and act as a hinderance. Therefore, the <b>vision for the Local Plan should encourage each settlement and community to be sustainable by itself</b>. Similar to the Winchester Town Forum’s 15-minute city idea, the Local Plan should look at each settlement and ask the question – how do we make this settlement sustainable?</p> <p>Restricting the development in the Market Towns and Villages only makes them less sustainable over time, however with workers wanting to stay local there is an opportunity to revitalise these communities. New developments in these areas could deliver community workspaces, with the additional population supporting local businesses; such as cafes and sandwich shops that used to cluster around office spaces in towns and cities.</p> <p>A new vision should be created, that promotes <b>development within each community to allow residents to fully live within their local area</b>. This means enough market and affordable housing must be delivered in the market towns and villages to encourage young working families to be able to live where may have been priced out of before. Then local facilities and places to work will follow the greater working population. These communities will become more sustainable allowing their residents to live, work and play within 15 minutes walk or cycle from their own home. This could be a community area within Winchester Town or a whole village like Wickham or Swanmore.</p>
C313	Less emphasis on new housing, other than <b>reuse of existing buildings</b> .
C314	<p><b>The vision has been rendered obsolete by significant changes to the challenges faced by Winchester.</b></p> <p>The impact of COVID on work and shopping patterns is one obvious area, the full and lasting impact of which is not yet clear. An ageing population is another.</p>
C315	<p>The vision remains broadly appropriate. Bargate Homes consider it important that <b>the vision continues to recognize that the County Town of Winchester and the market towns and larger villages have an important role to play in meeting the district's housing requirement</b>.</p> <p>The vision could be updated to acknowledge the role the new Local Plan could play in helping to address climate change, but this must be on the basis of realistic and viable climate change objectives, as set out in Bargate Homes' response to the 'Local Plan Objectives' and 'Carbon Neutrality' questions in the following sections of this questionnaire.</p>

C316	<p><b>Nothing is said about wildlife and becoming ecofriendly, and too much emphasis is placed on Winchester rather than the surrounding areas</b>, particularly with regard to ecology where large gatherings in Winchester are encouraged to the detriment of the villages through which main roads run. Main roads are the curse of villages and not enough is done to curb traffic and develop strategies for the safety of people who decide not to use vehicular traffic. There is also emphasis on the South Downs and their very fortunate villages, and not enough emphasis on the rural nature of the villages unfortunate enough to be outside this area.</p>
C318	<p>Building on open countryside should be protected in the vision.</p>
C319	<p>There is <b>no mention of a green belt</b> around our (currently) distinct towns and cities -all the above statements can be used as a licence to develop both businesses and housing anywhere - except the South Downs NP which, in many ways, is no more special than much of 'rural' Hampshire.</p>
C321	<p>Coming from a marketing background, a vision should be setting the scene of what 2030 could look like not what you need to do to get there. Sell the sizzle and then go down into the detail. I think you need to be careful using terminology like 'attractive countryside' when you propose excessive housing to be built on all the wonderful countryside that makes Winchester unique. There is <b>no mention of sustainability</b> in there. A community that is well prepared and resilient for the future will be the only way that 2030 is achieved. Resilience and a healthy environment rich in biodiversity are core to the very nature of our planet's survival and need to be included in the heart of the vision.</p>
C323	<p>The key area relating to Waterlooville and Whiteley refers to existing allocations that are currently under construction. <b>At this stage of the new Local Plan it would be inappropriate to continue to refer to growth in these locations until a decision has been made</b> about the most suitable distribution for housing for the future.</p>
C325	<p>the vision is <b>outdated</b></p>
C326	<p>Development strategy: <b>WCC should always first and foremost carefully assess need and seek to protect large swathes of greenbelt</b>, in particular the area south of Winchester. The plan needs to be adjusted to build from the community level and take fully into account recent impacts of the on-line economy. and encourage, rather than discourage regeneration of our high streets. WCC should criticise housing justification/need that has given rise to this study.. Brownfield sites must always be developed first. I understand that WCC has already reached its housing target or near to reaching it.. Proposals such as RoyalDown cannot be justified in any shape or form, particularly from an environmental perspective... carbon emissions, sensitive environment, traffic generation The area is a habitat for protected plant species,</p>

	<p>wild life and valuable chalk downland. It seems natural for this green belt area to be included in the South Downs National Park.</p>
C327	<p>Issues such as <b>climate change and the impact of Covid on work and social activities need to be reflected in the vision.</b> The local plan needs to deliver in accordance with a vision incorporating these issues and also delivers sustainable development consistent with NPPF.</p>
C329	<p>Disagree with statement for Winchester city: should be the focus of the district's housing/employment/education/health/transport offers as the best chance of providing a truly sustainable and 'viable' settlement. Therefore first sentence should be something like: <b>the County Town of Winchester needs to proportionately meet the housing and community needs of the district...</b></p> <p>Agree in principle with the vision for market towns and small settlements. But it's 'lip service' as existing policies are failing to deliver similar visions with small settlements continually 'accepting' developments that fail this vision. <b>Local Plans do not have sufficient power to deliver truly 'viable' and sustainable developments as money, profit, power and influence are much bigger drivers of local development</b> with any benefit arising for local communities being luck rather than genuine mitigation, opportunity, improvement or investment. But that said would suggest strengthening the vision: 'strive to keep the market towns and villages in the rural area as viable settlements through offering where possible a range of local services and facilities, especially self-sustaining opportunities to respond to local needs balanced with reducing the need to travel and mitigating new development traffic as part of keeping their individual identify and rural character.</p>
C330	<p>I quote Jan Warwick's statement on her leaflet "Responding to Royaldown" which begins "<b>Our green spaces are under threat of potential development. The Royaldown proposal includes 5000 homes,.....</b>" If you have not read this, I urge you to do so. I agree with her, and her "<b>5th Proposal</b>"</p>
C331	<p><b>Sustainable development must be at the heart of the plan</b>, and all issues covered must take this into account, as well as climate change issues. Increasing biodiversity is part of this.</p>
C334	<p>To add to the final point: the <b>market towns and villages should be protected from suburban development</b> both within Winchester district and from adjacent boroughs to retain their essential character</p>
C335	<p><b>Strengthen protection of the countryside from large scale development</b>, both inside and outside the National Park</p>

C336	Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.
C337	developments need to respect the setting of Winchester and other centres in the surrounding landscape maintaining settlement gaps avoiding urban sprawl
C341	The distribution of development
C342	However, there needs to be <b>reference to environmentally friendly</b> , therefore, diverse, dynamic and environmentally friendly communities
C343	WinACC suggest <b>that tackling climate change should be incorporated into the new vision</b> . We feel it is not sufficient to restrict discussion on tackling global heating to the objectives. We feel it is a fundamental part of creating a district where people can live full lives and should be the main element in the overarching vision. The existing 'vision' is very specific and would fit better in the objectives. Add :- <ul style="list-style-type: none"> <li>• <b>“ensure everyone has access to healthy, nutritious, affordable and ethically sourced food and to information that that promotes better food choices.”</b></li> <li>• <b>“We will embed the UN Sustainability Goals into the Vision”</b></li> </ul>
C344	The comment has been removed as the respondent requested their response not to be published
C346	"knowledge sector" is insufficiently specific for local economy. doesn't address environmental issues or wellbeing of residents.
C347, C348	It needs re-drafting: It <b>should be focussed primarily on sustainable housing development</b> and be updated to prioritise how key issues for 2021-2030 might be addressed - pandemics, climate change, need to reduce carbon and other emission levels within the context of sustainable development. The vision needs to clearly balance the vision for Winchester as a City and the neighbouring parishes and towns, away from the City, which make up well over half the population
C351	The following should be added: <ol style="list-style-type: none"> <li>a) Use brownfield &amp; previously developed land first</li> <li>b) Redevelop Winchester City Centre to challenge the decline in retail</li> <li>c) Develop some areas in south Hampshire close to the south coast free ports</li> <li>d) Allow small development in market towns and villages to meet local need</li> <li>e) Support a Green Belt to protect our settlement gaps</li> <li>f) Build more 'affordable' housing in Winchester</li> </ol>

C352	<p>The <b>planning permission for homes already approved for development to 2031 should be incorporated within the new Local Plan, but with the addition of a requirement for better housing design and use of technology relating to mitigation of climate change.</b></p> <p>What has been shown lacking by the impact of COVID is an insufficiency of <b>green space accessible by foot</b>, rather than by vehicle. Our countryside footpath network has not been adequately maintained or developed over the years and is now seen as inadequate; new “fit for purpose” parkland is needed.</p> <p>COVID has impacted on the city (and elsewhere) as a retail space and change is needed in order to incorporate more leisure space and activities and to develop redundant retail space into accommodation which will bring young people into the city.</p>
C353	<p>The existing vision is at such a high level that it's not useful as a planning tool. I think the new focus on climate change / environment, and how work patterns are changing, is much more useful and coherent.</p>
C355	<p>Less "mega-development".  Less use of agricultural land  More sustainable eco conscious housing.  <b>More mixed housing</b> to avoid "granny ghettos", "exclusive enclaves" and grouped demarct social housing. This is how productive society is developed rather than gated communities and grouped housing which merely promotes fear of "other".</p>
C356	<p>the aim should be: "to provide long term employment that will attract a young, local working population so as to create a more vibrant society that is not reliant on the public sector or commuting".  <b>the economy has to grow and should not be hampered by the focus on a few sectors.</b> If you have a list then other investors and employers will naturally be put off in the expectation that the Council will be prejudiced against them.</p>
C360	<p>It is necessary to <b>ensure that the invaluable historic character of central Winchester is retained</b> and that any development should be assessed against the question will what is proposed retain or add to that character not be one more step to undermine it.</p>
C361	<p><b>The vision was drafted some years ago and the challenges facing the district are significantly different today.</b></p> <p>The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces.</p>
C362	<p>The comment has been removed as the respondent requested their response not to be published</p>

C363	<p>We have to include the <b>ever-present threat of climate change and the need to live more sustainably</b>. We cannot keep building over the countryside as we have been doing. Species are dying out owing to modern farming and the concreting over of so much of the countryside.</p> <p>Covid has also had an impact. Some of the city centre is now up for grabs as a brownfield site. This would be better for the environment to have people living and working in the same area as it would cut down on traffic and therefore pollution.</p>
C364	<p>We are now in a <b>period of rapid change</b>. <b>The plan focus should be sustainable development supported under a recognised framework</b>. The plan should <b>be for the whole district</b> not just Winchester.</p>
C365	<p>Add to the introduction from the second sentence: <b>As an affluent semi-rural district Winchester has very high CO2 emissions per head of population, and reduction in these emissions is an urgent priority</b>. The need to re-orientate the district to a zero-carbon district will provide an opportunity to improve fundamentally the quality of life in the district.</p> <p>Add to section on Winchester Town: It is of <b>high priority to reduce traffic congestion and pollution in central Winchester</b>, to improve its ability to act as a public transport hub for the whole district, and to achieve its potential as a high quality historic urban environment where creative human interaction can take place.</p> <p>Add to <b>Waterlooville and Whiteley</b>: These are areas of extensive recent growth; the priority here is <b>to provide a greater distinctive sense of place, and better green communications infrastructure</b> to reduce car-dependency and social isolation.</p> <p>Add to market towns / villages: There is a danger here that excessive intrusion by visiting private vehicles will degrade the quality of the rural areas, and steps will be taken to reduce the level of intrusion and increase the quality of the environment by the progressive establishment of "<b>low-traffic rural parish/town zones</b>" (along the lines of low traffic neighbourhoods), visitor parking points, and a network of safe footpaths, cycleways and enhanced bus routes. Generation and storage of clean energy, rewilding, and greater biodiversity will help reduce domestic consumption of gas and oil, and upgrade the environment.</p>
C371	<p>I am concerned that <b>Winchester being a 'special place' may well be adversely affected by the proposed 5,000 new homes</b>. Particularly with their generation of approx 25,000 additional traffic movements along the Romsey Road to the M3. I live very close to the Romsey Road and there is already a great deal of congestion on this route, particularly at the Kilham Lane traffic lights at rush hour. I also have grave <b>concerns about the beautiful countryside that will be lost between Hursley, Oliver's Battery and the Romsey Road</b>, where my family and friends walk their dogs, exercise and generally hugely <b>appreciate the benefits of the local green spaces</b>.</p>

	Therefore I would prefer the <b>5th option proposal</b> , which would- 'Use brownfield and previously developed land first. Redevelop the City Centre to challenge the decline in retail and develop some areas in South Hampshire, close to the south coast freeports. Also allowing small developments in market towns and villages to meet local need'.
C372	There needs to be mention of <b>protecting green spaces, wild life and natural habitats around our city</b> . These green spaces are integral to the character, identity and reason for visiting and living in the district.
C376	don't understand the geographical connection between Waterlooville and Whitely with Winchester. Surely they should be associated with other areas closer to them. There should be a <b>greater adoption of the <a href="https://www.tcpa.org.uk/the-20-minute-neighbourhood">https://www.tcpa.org.uk/the-20-minute-neighbourhood</a> so as to minimise the cost associated with travel</b> . This is consistent with diversification of the town's economy but is not compatible with, for example, the creation of a huge expensive sports hall on the edge of town -supposedly focussed on access by motorway.
C381	The vision is still considered appropriate, however, it <b>should be updated to reflect the Councils climate change agenda</b> .
C382	The Plan <b>needs to address the challenges that have been throw up in 2021, which include but are not limited, to the impacts of the Covid Pandemic, UK leaving the EU and and the massive decline in the retail and hospitality business in Winchester</b> . Of course many of the challenges remain such as <b>Climate Change</b> , and sustainable and appropriate development. But I also think there has to be a greater focus on Protection of the Countryside, Preservation of the character of our market towns and villages, Biodiversity, and the Natural Environment. The Vision of a New Local Plan should treat Preservation of the Environment, the Countryside, Biodiversity and the character of our market towns and villages as primary goals to which other demands should be integrated.
C383	The vision needs to be updated to <b>reflect the climate change agenda</b> .
C386	<b>Stronger protection for the countryside that lies between settlements in the southern parishes</b> . 'Countryside' businesses such as quarries, equestrian sites with mobile homes, park homes developments and gypsy and traveller sites are contrary to WCC's sustainability policies and should be planned for through the Local Plan process. Privately managed open spaces and landscaped areas in new developments are not supported. Permitted development rights should not be removed for new developments. Renewable energy technology should be included in all new developments.

C388	<p>There needs to be a priority for <b>any and all new developments throughout the district to be truly sustainable</b>, eg by requiring developments to be more energy self-sufficient, carbon-neutral and to promote biodiversity. Planning consent should be contingent on this. This is such an essential requirement that I think it needs to be made explicit as the <b>overarching principle</b> of the vision.</p>
C394	<p>Less emphasis on new housing, which directly contradicts the Council's stated objective of becoming carbon neutral by 2030.          More emphasis on getting the most from what we've already got and <b>on changing local travel options to reduce car ownership</b> and usage.          More emphasis on maintaining and protection local countryside.</p>
C397	<p>The vision was drafted some years ago and <b>the challenges facing the District are significantly different today</b>, for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change.          The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.</p>
C398	<p>the plan seems to involve using high quality, limited green field sites / farm land to develop housing - changing the nature of the local area and storing up trouble for the area in numerous different ways - re air quality / increased risk of flooding / reduction in open areas to be enjoyed by local people / diminishing the health of local people (respiratory issues / mental health / access to open areas for recreation / reduction in biodiversity / reductions in local resilience / reduced self sufficiency of food production etc. Hampshire is a beautiful county which is steadily being paved over - so many of the <b>open areas are being built on with a negative impact on air quality and quality of life in general.</b></p>
C399	<p><b>The vision was drafted some time ago and the challenges facing the District are significantly different today</b>, for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change.          The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.</p>

C404	<b>Due to brexit and covid we face very different challenges.</b> I have concerns for the decline in the high street and the need to preserve our green spaces so that we are able to enjoy our countryside whilst staying local. any development of the greenspaces would be catastrophic for the city, its residences. Any changes to the local plan should be with sustainable development in mind.
C407	<b>The vision needs to be updated. The impact of the pandemic and concerns about climate change must change how we plan for the future,</b> prioritising wildlife, the environment and wellbeing and taking into account people's changing working patterns. The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.
C408	<b>As the vision was drafted some years ago it is now outdated.</b> How we live and work today is now very different and so any plans need to reflect these differences - how we work, travel, shop have been significantly impacted by COVID and these changes will carry us forward over the next years. Even without COVID people had already started to express their views on the environment and how to protect it, how we can ensure sustainable development and how this then fits into work/life balance. Any strategic plan therefore needs to show how these changes are taken into account. particularly at a local level by WCC.
C412	The comment has been removed as the respondent requested their response not to be published
C421	Generally appears ok, however presume this will be <b>reviewed in the light of potential new ways of working, operating, travelling</b> etc following the covid learning
C424	Amendment for <b>Post Covid expectations</b> on Transport, Leisure & Recreation and the use of the town centre
C429	No, it needs re drafting: <ul style="list-style-type: none"> <li>• In 2021 we <b>face significantly different challenges</b> (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street, changes to permitted development rights, commuting patterns etc).</li> <li>• At its heart should be <b>sustainable new development</b>, which is the proper business of a Local Plan.</li> <li>• The other elements (climate change, protection of countryside, biodiversity, natural and historic environment, etc) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should <b>demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</b></li> <li>• A coherent and <b>consistent Vision for the whole District</b> should be created. From this, objectives can be</li> </ul>

	<p>developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view.</p> <ul style="list-style-type: none"> <li>• The geographic split causes confusion with respect to the southern urban area, which might just be West of Waterlooville and Whiteley, or might be the area under the auspices of PfSH, which would then overlap with all the southern settlements which also lie within MTRA. This is not clear.</li> </ul>
C431	Development on greenfield sites in outlying villages with limited amenities and traffic issues is not appropriate.
C436	Add much more about need to <b>zero carbon</b> refer to Sustainable Development Goals
C437	Mostly from the previous plan but needs updating to include <b>more carbon efficiency</b> and plans to protect the natural environment from damage to trees, hedges and creatures that use these to nest and live in.
C439	<p><b>The planning permission for homes already approved for development to 2031 should be incorporated within the new Local Plan, but with the addition of a requirement for better housing design and use of technology relating to mitigation of climate change.</b></p> <p>What has been shown lacking by the impact of COVID is an insufficiency of green space accessible by foot, rather than by vehicle. Our countryside footpath network has not been adequately maintained or developed over the years and is now seen as inadequate; new parkland is needed.</p> <p>COVID has impacted on the city as a retail space and change is needed in order to incorporate more leisure space and activities and to develop redundant retail space into accommodation which will bring young people into the city.</p>
C445	<p>The vision as presented is very woolly, there <b>needs to more specific reference to the protection of the existing historic and natural environment.</b> At the same time a vision on how to benefit from and build on the existing brownfield areas within the district.</p> <p>Specifically how Winchester plans to revive the city and town centers by bringing people back into the centers upon which more local services and retail outlets can grow.</p> <p>At the same time reducing the reliance on personal transportation to carry out daily activities</p>
C446	The comment has been removed as the respondent requested their response not to be published
C450	<p>Use <b>Brownfield sites and land previously developed</b>, make the best use of existing areas before throwing up new developments.</p> <p>Redevelop the city centre. It is a beautiful space it deserves investment.</p> <p>Develop areas close to our free ports and in South Hampshire that would better benefit from development.</p>

	Allow small development in market towns and villages to meet local need. Support a Green Belt to protect our settlement gaps.
C452	<p>Whilst we need to create housing provision <b>there needs to be better guidelines for the objectives of this and a framework to ensure those objectives are met.</b> Barton Farm is a hideous development - this could have been a visionary project. The residents of Winchester were opposed to this. Given their concerns were not listened to, the least that could have happened is that the resulting development actually be attractive and reflective of the heritage of Winchester.</p> <p><b>Winchester has a lack of creative workshops, studios, artists etc.</b> Given it's history and heritage this never fails to amaze me. We need to allow young talent to thrive.</p> <p>This is the first time that I have seen reference to onegreatwin below. Why are these forums / working groups so invisible?</p>
C453	<p>Yes, although I feel the recent increase in housing developments permitted in Winchester City, including in-filling (eg Chilbolton Avenue overlooking the golf course is pretty awful!) is about to go too far and change the character and traffic of this county town. I think more critical interrogation of government 'targets' might be fruitful since many forecasts often are not grounded in reality. <b>The need to enforce social housing requirements on developers needs more stringent policing, and recent strategic threats to green space (possibly to one golf course and land adjoining Badger Farm) need resisting.</b> I think generally the Town Forum thinking about more local 'pockets' of small development aimed at improving neighbourhoods and reducing traffic would add up to a general 'holistic' mass which would preserve the vibrancy of the city and it's surroundings. A key issue is why have so many car parks tempting avoidable traffic into the centre? European cities have other models of pedestrianised mixed housing, hospitality, culture and small retail (not chain stores) which work well.</p>
C461	<p>It needs re drafting:</p> <ul style="list-style-type: none"> <li>• In 2021 we face significantly different challenges (more focus on climate change, effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).</li> <li>• At its heart should be sustainable new development, which is the proper business of a Local Plan.</li> <li>• The other elements (Climate Change, Protection of countryside, Biodiversity, Natural Environment etc) should be tackled in relation to this.</li> <li>• Delivery of this sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</li> <li>• A coherent and consistent Vision for the whole District should be created. From this, objectives can be</li> </ul>

	developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a "Winchester-centric" view.
C462	<b>As climate change is a high priority for the City Council, this ought to feature in the vision emphasising the need for the local plan to require all development and policies to require all development to be sustainable as defined in the NPPF.</b> Transport needs radical change moving away from private vehicles to public transport, walking and cycling so this should be an important component of the vision
C464	More emphasis on the " <b>rich historical and cultural heritage and attractive countryside</b> " of the <b>Winchester District</b> - not just the city. Protect and enhance the areas around that have particular heritage and recreational value - a resource much used by inhabitants of the city and surrounding areas.
<b>C466</b>	The comment has been removed as the respondent requested their response not to be published
C469	Yes <b>the vision is correct but strangely none of the current developments adequately support this provision</b> - please look at this current developments carefully. An important reason is that the vision is woolly and not sufficiently defined. The idea that demand for retail will increase does not seem correct according to current trends, so threatening town centres
C471	This is now <b>out of date</b> as our society and its needs have drastically changed due to Covid etc.
C472	<b>Green gaps between the villages should be maintained</b> in order to preserve the separation of the distinct settlements. New housing should be in areas where there is appropriate infrastructure including public transport.
C475	Reduce, reduce reduce the extensive housing being undertaken
C477	Unsure
C478	Housing in Winchester city should be on Greenfield sites first. <b>Development of green areas / fields / golf courses / farmland should not be considered as this will change the character of the city.</b> The city should not be merged with surrounding villages through large scale development schemes as this will change the character of these settlements. Bushfield camp and existing redundant military areas should be developed over and above the city surroundings. Winchester city is a nice place to live and is frequently at the top of lists of best places to live, however our ever expanding city will lose its appeal due to building homes in green spaces, which are often out of the financial reach of local residents and our young people, thereby not really meeting the needs of the locals.

C480	<p>The current statement reads well and reflects the special character of our district. I particularly <b>agree with the aspiration to develop the potential of the knowledge, creative, tourism and education sectors in Winchester Town and the need to preserve the distinct identities and rural character of the villages in the district</b>, as well as to respect the role of the South Downs National Park.</p> <p>The vision could be improved through <b>additional emphasis and more developed ideas pertaining to the needs and choices of a diverse population</b>, for example, the fact that the housing on offer should facilitate <b>working from home, multi-generational living</b> that promotes the well-being of and respects independence of the older generation, enjoyment of <b>nature</b>, personal contributions to confronting the challenge of <b>climate change</b>, etc.</p>
C481	<p>The local plan should take into account the findings of the consultation. In this, <b>green space must be protected</b>; local people should be asked to identify <b>brownfield sites for future development within the city</b>; the surrounding green spaces (fields, golf courses, playgrounds) should be protected from development. Winchester's <b>green space is vital both culturally and ecologically</b>.</p>
C482	<p><b>The town forum vision</b> is not to be confused with the Winchester District.  It <b>does not reflect 2/3rds of the District</b> and no opportunity was provided for the District to develop an equivalent document - minority representation should not drive the majority.  <b>Covid-19 impacts are insufficiently referenced</b>  <b>The economy plays second fiddle in the narrative</b></p>
C483	<p>As set out in the supporting paragraphs of the 'Your Plan Your Place' consultation document, it is agreed that the current vision remains relevant with the principle focus of development within Winchester Town and the southern Market Towns of the District as the right location for future growth. Albeit the <b>wording of the vision must be updated to reflect the climate change agenda and ensure growth is focused in sustainable locations</b>.</p> <p>The principle of <b>the fifteen minute city model discussed as a key concept in the Winchester Vision Document should be taken in to account when considering the allocation of sites for future development across the District as a tool to assist in the delivery of sustainable development</b>. The concept should be redefined for areas outside of the centre of Winchester, creating the concept of <b>walkable places/neighbourhoods</b>, with a focus on sites which are able to demonstrate key requirements for working towards and achieving this vision to be allocated for housing.</p> <p>Policy wording should be redefined and <b>consider walkable places, to include a hierarchy of requirements</b></p>

	<p><b>including walking distances to every day services, access to key transport routes and the ability to incorporate or enhance existing walking and cycling routes as a minimum requirement</b> with additional optional requirements, such as provision of onsite infrastructure, service etc. sought, if viable.</p> <p>The allocation of land located on the edge of an existing settlement, close to existing services, community facilities, transport infrastructure and open spaces would, by definition, be considered a sustainable location, and would tie into the fifteen minute city concept by creating development in locations where people can access everyday goods and services without relying on the car.</p> <p>The allocation sites for housing development on the edge of existing settlements with access to local services and community uses should be considered a high priority in achieving these aims.</p> <p>As promoted through the 2020 'Call for Sites' process, Land West of London Road, Purbrook provides such opportunity and can make a good contribution towards walkable places, due to it being in close proximity to the shops and services of Purbrook Village. The development of Waterlooville (Newlands) to the north is to provide a range of services and community facilities with both walking and cycling connections to be available between it and the Land West of London Road within the plan period. Indeed, the recognition of Waterlooville (Newlands) as a Market Town in the Settlement Hierarchy Review 2021 establishes it as a key service centre available to support population growth within this housing market sub area. The entire area of the proposed development would be located within 400m of the flagship Star Rapid Bus Service route (Route 8) which runs from Portsmouth in the south and up to Clanfield in the north. The Rapid Bus route has dedicated lanes, runs every 15 minutes and is an established popular means of commuting into Portsmouth.</p>
C485	<p>i HAVE NOT HAD ANY TIME TO REVIEW THE LOCAL PLAN, AS IS FIRST TIME AWARE OF IT WOULD LIKE TIME AND FURTHER INFORMATION</p>
C487	<p><b>Much has changed since the Plan was drafted.</b> It needs re-drafting to reflect the current situation <b>post Brexit, the Covid pandemic and changes in the High Street.</b> <b>Sustainable residential new development, in particular within existing settlements and on brownfield site should be prioritised over development within green field</b> land and open spaces, such as golf courses, recreational facilities and land between settlements which should be protected from development. Developers profits should not influence planning decisions and damage our very special environment, the fact</p>

	<p>that high profits can be generated from developing here means the countryside and recreational spaces around Winchester need protecting more than ever from development.</p> <p>The <b>housing numbers stated as being required, seem to be far in excess of those likely to be required both during and well beyond the Plan period</b>, it is also important that no additional numbers are added to those from other areas, Winchester should not take more than it's proper allocation. The road networks and infrastructure into the City are already under pressure.</p> <p>A <b>consistent and coherent vision for the whole District should be created</b>, from which objectives can be stated to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a "Winchester-centric" view.</p>
C489	<p>at it's heart this document should be focussed on <b>sustainable new development that does not destroy the local green spaces</b> which are very important to maintain spaces between settlements. in addition it should focus on the importance of maintaining the natural green spaces and historic undeveloped lands around winchester emphasising the importance of these natural historic landscapes.</p>
C492	<p><b>North Boarhunt should be considered as part of South Downs National</b> Park even though just outside of boundary when services and development are considered due to it's history and biodiversity including the market garden heritage and visiting Red Kites, Barn Owls and other important wildlife species.</p>
C493	<p><b>The impact of the internet, accelerated by the Covid crisis</b>, is undoubtedly influencing the existing and future lifestyle of many households and will have an impact on high streets especially that of Winchester.</p>
C494	<p>Although you state the project started in 2020 I am sure there is a lot of pre 2020 thinking within it. It's all corporate and glossy and unachievable.</p> <p><b>How are the objectives going to be measured ?</b> Most project plans have SMART objectives.</p> <p>COVID and click and collect and Amazon and the likes have fundamentally changed the way things are and will happen in the future, people will not return to the 'as was'. A lot of the thinking is 'past thinking', we have to continually ask 'why are we doing this, why are we going back to old thinking' <b>COVID has presented new opportunities as well as considerable hardship.</b></p> <p>For instance a obvious 'why' question when the country is strapped for cash is why we have County Councils and District Councils when there are very obvious savings to be made and redevelopment such as this is not on a micro District level it is much wider issue and needs to be dealt with at least at county level/sized areas.</p> <p>You are looking through a magnifying glass. You need a wider perspective.</p> <p>We have the M3, M27, A3(M), the major railway link into London from the South, the flightpath to Southampton Airport, we are down wind (prevailing winds) from Fawley Oil Refinery &amp; Marchwood Incinerator &amp; a major sea</p>

	<p>port, soon to become larger. Plus also pollution from France/Europe carried on the wind. All factors outside of WCC control but having a major uncontrollable impact in a such a small area plan.</p> <p>As a generalisation of <b>2030</b> as a local objective, however noble, is living in cloud cuckoo land and totally unrealistic and unachievable, when the wider community is using 2050.</p> <p>WCC need to refocus and be realistic. Setting <b>unachievable objectives</b> is not a vote catcher.</p>
C497	<p>No, it needs re-drafting and <b>significant update given the huge (and accelerated) new challenges emerging in the past year.</b></p> <p>In 2021 the UK face significantly different challenges (more focus on climate change, lasting effects of the Covid pandemic, UK leaving EU and a rapid decline in retail in the High Street).</p> <p>Delivery of truly sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</p> <p>A coherent and consistent Vision for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view. Protection of existing green space is paramount, as new development is irreversible. More than ever, we should focus on protecting the countryside and investing in urban/suburban renewal and rejuvenation.</p>
C498	<p>Nowhere in the vision does it qualify that this means protecting the countryside / green lands and the present communities by increasing the Green Belt and limiting the size of future developments to only brown field sites and only to the natural growth required of the present communities - the <b>vision should specifically exclude huge developments of great than 100 dwellings on any site as these are not required and go against all of the present vision statements.</b></p>
C499	<p>Countryside Gaps between settlements will be retained</p>
C501	<p>But it needs to include building of infrastructure to enable and encourage active travel in all areas and reduce our environmental impact.</p>
C507	<p><b>It needs to have a strong element about the countryside and rural areas not concentrate on the settlements.</b> It needs to include statements about how you are going to protect and enhance the countryside and rural businesses</p>
C511	<p>Lower demand for housing, retail and offices caused <b>by Brexit and Covid</b> needs to be reflected in scale of vision</p>
C513	<p>Covid has shown how important the countryside being easily accessible to local communities. <b>Large sprawling conurbations are not the way forward especially with climate change and our need to not rely on the car.</b></p>

<p>C515</p>	<p>It is considered that there is some scope to better and more formally acknowledge the role of Winchester’s Market Towns in delivering housing for the District within an updated vision. As detailed in the Council’s Settlement Hierarchy Background Paper, Winchester is at the top of the revised hierarchy, with nine ‘Market Towns’ and ‘Large Villages’ sitting below with a scores of 30-50. As detailed in the updated hierarchy, <b>settlements that are in a higher tier of the hierarchy such as Denmead will often be more sustainable locations for new development.</b> It follows, therefore, that the role of these Markets Towns should be more formally recognised in an updated vision, alongside Winchester.</p> <p>The current vision stresses the need for areas at Waterlooville and Whiteley on the southern fringes of the district need to provide homes, jobs, physical and social infrastructure. With these strategic development areas having now been consented and being built out, Welbeck Land would query whether continuing with a specific South Hampshire category is warranted and in fact the Vision should now be focussed on Winchester, Market Towns (which includes the consented strategic developments mentioned above) and rural areas. Instead, the reference to role of the Market Towns in delivering sustainable and proportionate housing growth should be strengthened, reflecting their respective scores within the revised settlement hierarchy.</p> <p>Welbeck would endorse a more formal acknowledgement within the Council’s new Vision of the need for the Council to plan for new sustainable development. Welbeck look forward to working with WCC and key stakeholders to demonstrate how their land at Mount Edgecombe Farm can make a significant contribution to achieving the Council’s Vision.</p>
<p>C516</p>	<p><b>Food is one of the big issues shown by the Pandemic</b> particularly. We should add  “ensure everyone has access to healthy, nutritious, affordable and ethically sourced food and to information that that promotes better food choices.”  and also  “We will embed the UN Sustainability Goals into the Vision”</p>
<p>C520</p>	<p><b>nothing needs to be changed</b> . Winchester have for many years had a clear vision of where sustainable development should occur and have developed clear policies  MTRA4, CP15, CP16, CP18,CP20 DM5 DM 23 Dm24 that cater for that .  also <b>the current plan already has a significant proportion of the housing need to 2038 with a relatively small number of additional houses required to meet the 2038 target</b></p>

C521	There is an inherent assumption that 'growth' is an essential element of the Local Plan. While undoubtedly <b>growth is required in specific areas, these are not sufficiently identified and described.</b> A plan that is developed on the back of 'general growth' being a necessary good thing will not serve the current or future communities. <b>Economic stability, environmental improvements, and high-quality services are the fundamentals that should be at the heart of the Local Plan.</b> Growth is a secondary consideration. Economists have shown time and again that where growth has primacy, problems follow.
C522	More focus on providing homes in Winchester and surrounding villages.
C523	I agree with the bullet points above, however I don't believe this is the Vision as outlined in the Plan. The core vision appears to be based around the so called 'Climate Emergency' which is wholly confected and not at all real as is easily shown with a cursory look at readily available empirical data. <b>Every single assumption for justification for action outlined in the Plan is easily proven to be false,</b> therefore public policy is being made on a house of cards which is not good policy and does not serve the interests of the citizens of Winchester. I have sent a paper outlining the fallacies in the plan's justifications to the Planning Policy email address <a href="mailto:planningpolicy@winchester.gov.uk">planningpolicy@winchester.gov.uk</a> .
C528	The Plan needs to <b>place greater emphasis upon allowing all settlements to grow proportionately to maintain their vitality and to support the provision of local services and facilities.</b> Whilst larger settlements should generally accept higher levels of development, it is also important to enable smaller towns and villages to expand to provide housing and employment opportunities for local communities rather than having to live and commute to larger Cities and Towns. This approach is more sustainable yet will not lead to an erosion of character if well-planned. Quite often sites can have a positive impact upon the local area and will provide much-needed homes yet are not supported due to the settlement not being able to expand even on a modest level. For example, we act for a landowner with a small site in Curdridge that is a reasonable infill development yet sits outside of current planning policy. A more flexible approach would support SME's and allow the organic growth of villages provided sign quality is high and local character is preserved.
C529	The Vision <b>needs to emphasise to a much greater extent the importance of protecting this area</b> from further human development eg building on greenfield sites, and the protection of the environment and natural habitats.
C532	Not on.ly does is <b>need to be</b> an "attractive place to live" but also <b>a practical, pleasant and sustainable place to live.</b>
C534	The comment has been removed as the respondent requested their response not to be published

C535	<p>Winchester Food Partnership wish to <b>add to the Vision :-</b>  <b>“ensure everyone has access to healthy, nutritious, affordable and ethically sourced food and to information that that promotes better food choices.”</b>  <b>“We will embed the UN Sustainability Goals into the Vision”</b></p>
C537	<p>The plan needs to be reviewed and refreshed, considering the world that were in now - <b>including COVID and the ways that has impacted how we work, commute and enjoy the surroundings. Also, the impact of climate change needs to be considered and built into the plan.</b></p>
C538	<p>there is a need to <b>develop sustainable transport, fit for the 21st century.</b> Develop a tram system for Winchester, servicing the city districts as well as the industrial areas.          In surrounding towns and villages help with better public transport, and connections to and from Winchester.</p>
C539	<p>Additional emphasis needs to be placed upon the <b>need to protect rural areas from encroachment.</b> The WCC area includes some intensely populated and dense settlements but also a whole section of unspoilt countryside in its NE quadrant. The emphasis seems too much in favour of encroachment and development and not enough on preservation.          The NE quadrant is a very rural and agricultural landscape and may need protecting by becoming part of the SDNP.          Basically the urban dwellers in Winchester seem not to pay sufficient notice of life out in the real countryside.</p>
C540	<p>The vision remains broadly appropriate. Taylor Wimpey Strategic Land (TWSL) consider it <b>important that the vision continues to recognise the County Town of Winchester and the market towns and larger villages have an important role to play in meeting the district's housing requirement.</b>          The vision could be updated to acknowledge the role the new Local Plan could play in helping to address climate change, but this must be on the basis of realistic and viable climate change objectives, as set out in TWSL's response to the 'Local Plan Objectives' and 'Carbon Neutrality' questions in the following sections of this questionnaire.</p>
C546	<p>The emphasis on meeting housing needs for the county town of Winchester should take into account a <b>requirement to use brownfield sites first and foremost.</b></p>
C548	<p>The District's vision should require all developments to be sustainable as a major contribution to achieving carbon neutrality.</p>
C549	<p>It is insufficient.          The 2020 RSA Heritage Survey shows that <b>Winchester has lost ground in terms of protecting its heritage assets.</b> The heritage assets are irreplaceable, and should be given greater priority in the overall Local Plan.</p>

	<p>The "<b>climate emergency</b>" should have a more balanced approach to assessing its priorities, rather than being led by extremist perspectives, such as those espoused by WinAcc and Extinction Rebellion. A 360 degree perspective is usually appropriate.</p> <p>The Local Plan should <b>put less emphasis upon industrialising rural Hampshire</b>, and more upon natural carbon capture, energy efficiency, sustainable agriculture and biodiversity.</p> <p><b>Priority should be given to enabling households to generate energy, rather than to lining the pockets of already wealthy landowners</b>, which is a consequence of industrial approaches to energy generation.</p> <p>It is not true that substantial private capital is only available for solar and wind generation, rather than other approaches to climate change mitigation.</p> <p>The Winchester Local Plan should <b>encourage the development of "neighbourhood" or other more local "community" plans</b>.</p> <p>Given the extent of beautiful rural heritage in the district, more emphasis should be given to the goals of <b>the Natural Recovery Network</b> - <a href="https://www.gov.uk/government/publications/nature-recovery-network/nature-recovery-network">https://www.gov.uk/government/publications/nature-recovery-network/nature-recovery-network</a></p>
C550	<p>The <b>climate emergency needs to be addressed wholeheartedly</b> and in full throughout the Local Plan.</p> <p>The Vision for Winchester does not go far enough and needs to be evolved into a city masterplan to guide development over the next 20-30 years to 2050 <b>allowing Winchester to become a zero carbon city</b>.</p>
C554	<p>Protection of the countryside should be maintained.</p> <p>Some changes are required for COVID evidence that more adult open space provision is needed.</p>
C555	<p>The proposal to build 5000 houses at 'Royal down' means building on the strategic gap between Oliver's Battery and the settlements to the south.</p> <p>It is <b>essential to maintain the strategic gap</b> to prevent the settlements of Oliver's Battery and those to the south becoming continuous urban sprawl.</p>
C556	<p>I think that all highlighted in the vision is important. However, it appears there is a <b>big push by the city council to develop affordable housing at the cost of other areas such as ecology and lifetimes</b>. I do not agree that Winchester is in need of affordable housing that takes away from green space.</p>
C557	<p>I believe that there should be greater emphasis on the future of the Market Towns and Rural Area to achieve a better balance in the District. This area offers the prospect of home working in a pleasant environment. <b>The localised economy should be enhanced</b>.</p>
C560	<p>Green belt security</p>

C561	<p>Why is it that the market towns and villages should be allowed to grow? The ability to sustainably increase the local infrastructure (transport, medical, shopping, schooling) is limited. The rural character will be destroyed for ever.</p> <p>Our town centres are dying. Buildings are in decay. Focus on the city centres. I am not saying that <b>development in the smaller towns and communities</b> should be completely excluded but it <b>should be discouraged</b>.</p>
C562	<p><b>The challenges facing the District are significantly different today</b>, for example how we shop, work and enjoy the countryside.</p>
C563	<p>Housing plan at royal down is overbuilt and no consideration for transport or impact on free space for community leisure use</p>
C567, C568, C569	<p>The vision was drafted some years ago and the <b>challenges facing the District are significantly different today</b>, for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change.</p> <p>The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.</p>
C570	<p>Agree that Winchester needs to remain an attractive place to live, visit, work and do business, but the <b>urgency of climate change means that aspects of sustainable and low-carbon development need to be highlighted at the highest level in the new Local Plan</b>.</p>
C574	<p>The vision needs to <b>include prioritising the need to reduce CO2 emissions</b>, reduce environmental degradation including depletion of underground water reservoirs and preserve agricultural land to enable food production</p>
C578	<p>We believe the vision <b>should include reference to addressing the climate crisis and the health crisis</b> in order to ensure a vibrant and attractive future for residents and visitors. [we see the enabling of more Active Travel to be a key part of delivering this outcome].</p>
C579	<p><b>"Whilst respecting the highly valued features and setting of the Town" - is critical</b> - which is a small town, set in beautiful countryside, with excellent transport links etc. Overbuilding new residential homes close to the centre will destroy the whole character of the town and the access to green spaces.</p>
C580	<p>Is the vision in the local plan still appropriate for inclusion in the new Local plan The <b>vision from the last plan understandably does not respond to the climate emergency</b>. It does not</p>

	<p>mention the overarching objective of the local plan which is to be a prime driver in the achieving of a carbon neutral Winchester by 2030.</p> <p>We applaud and support this objective but it is an ambitious task and will require a thorough-going overhaul of the City Council's thinking about planning. <b>There can be no more significant decision for the district, in terms of achieving carbon neutrality, than where new development is located.</b></p> <p>The original vision implies 'business as normal' in terms of growth in areas which are less sustainable and this is unlikely to be compatible with the carbon neutral goal.</p> <p>Also Covid 19 has accelerated trends that were already occurring in terms of homeworking shopping etc and these may well need to be addressed. These potential drawbacks to the current vision are covered in your page 9 but not acknowledged in the online consultation form.</p> <p>One of the great assets of the City Council District, which the vision should recognise, is that <b>the exceptional quality of the Historic City is balanced by the exceptional countryside and smaller communities both in and outside the National Park</b>, where the majority of residents live. The Vision needs to explore how to build on this special duality of complementary but contrasting attributes.</p> <p>It is good to see that Winchester Town Forum have progressed the Vision for Winchester 2030 but, whilst it undoubtedly deserves a place in this consultation document as an appendix, we do not believe that it should in itself be driving the overall Vision as is implied by its position at the front of the consultation. <b>There needs to be a balancing vision for the rural 60% of the district.</b></p> <p>The 6 critical values, whilst laudable in themselves, are generic to the plan-making process and not specific to either Winchester Town or the rest of the City Council area.</p>
C581	Brownfield sites must be prioritised to protect greenbelt.
C583	Mill Mead, the curtilage near the Mill House, Waltham Mill is an ideal site for housing as it is the closest available significant site to the Village centre which would mitigate the use of vehicles and is adjacent to existing developments
C586	Relevance of growing MDA's in their provision of services (e.g. Doctors, schools, affordable housing) and their growing contribution to the sustainability of the district and residents' ability to 'live well' and make the most of a lower carbon lifestyle locally.
C588	<p>The Vision in the <b>current Local Plan is not appropriate for the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</b></p> <p>The Winchester Town Forums Winchester 2030 document focuses on Winchester Town Centre and although this is important, it only represents one-third of the district's residents. Where the homes go is essential to meet</p>

	<p>the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All: The four options presented either do not make best use of brownfield and previously developed land (PDL) or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton. A 5th option is preferable to all 4 of the proposed options and is described below:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes</li> <li>• Use PDL across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the Winchester Town Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the South Hampshire Urban Areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>A <b>new Green Belt</b>: A new Green Belt to cover land south west of Winchester Town and protect both the rural Parishes and the shape and setting of Winchester Town would stop urban sprawl and merging of settlements. It would force more development onto PDL including Winchester Town Centre, plus allow limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C589	<p><b>Local Gaps are continually being eroded and countryside being lost to excessive development.</b></p> <p>Southampton and Portsmouth cannot expand to the south because of the sea so there is considerable pressure through PUSH to eat into northwards to the detriment of others. There is now undue pressure coming up from Fareham with Welbourne overshadowing Wickham to the detriment of being an attractive gateway to the Meon Valley. Urban Growth needs to be curtailed.</p>
C593	<p>It needs to be revisited to take stock of</p> <p><b>1. the urgency of action required to take account of the speeding up of climate change;</b></p>

	<p>2. human activity on .. the multiple and in combination impacts of human activity in the District upon the natural world</p> <p>3 . to explore a <b>more radical approach to sustainability</b></p> <p>4. The establishment of the South Downs national park and the Districts legal requirement to have regard to the effect of its actions on the SDNPA.</p> <p>5. <b>The effects of COVID on multiple aspects of economic and social life</b></p> <p>6. the <b>effects of 11 years of Austerity on the ability of local government to supply infrastructure</b></p> <p>7.to take account of changes in the National Planning Policy Framework and other changes in Planning Regulations and Law</p>
C594	I would like the second and third bullet points to include the 'highly valued features and setting' wording used with justification in the first bullet point about Winchester, a place I love - it might be in terms of a vision to develop these aspects or to secure them within the press of development - let's have all our communities enjoying features and settings that we value highly
<b>C595</b>	The comment has been removed as the respondent requested their response not to be published
C596	The vision has become out of date and <b>needs revising in the light of changes in society in the last few years, needing greater focus and urgency on climate change and its detrimental effects on the environment.</b> Additionally and not least the <b>COVID pandemic has changed habits of Winchester's residents and their future needs</b> , and any future development, if any, must reflect this and support economic recovery. Any plan needs to be sustainable and as green as possible to fit more in line with the NPPF.
C597	Please see representations made to Planning Policy, submitted in PDF form.
C600	There <b>needs to be a wider understanding of Housing needs for inclusion of all.</b> There is and has been too much bias towards larger housing developments that provide 'boxes' for people to live in. Whilst there is an understanding that it takes as much effort to deal with a commercial developer who will build for multiple houses on a single site, this <b>approach does not take account of diversity for self build or developers.</b> There is too much constraint and too much wielded influence by some Parish councils. Not all people want to live in a 'Box'. <b>Green and sustainable build is possible in rural and Semi rural areas.</b> There should be greater latitude to develop in fill land when undertaken in a pragmatic manner and following <b>sympathetic village design statements.</b> With Winchester District only having Neighbourhood plan, consideration should be given as to whether Neighbourhood plans restrict well being and inclusivity in that Neighbourhood or whether they are used to wield too much influence by the Parish. The Denmead Neighbourhood plan was passed in 2015 with a 1 or

	2% margin and the 5 year review has yet to commence despite 5th anniversary having passed in 2020. The Denmead Village design statement is good.
C601	There <b>should be greater emphasis in the vision on places to "play" as well as to live, visit, work and do business.</b> The COVID-19 pandemic has reinforced the importance of having <b>open spaces and built facilities that support people's mental and physical health</b> and well-being, and which are easily accessible to all. This must include facilities for sport, leisure, culture and the arts.
C603	The vision was drafted some years ago and <b>the challenges facing the District are significantly different today</b> , for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change. The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.

Respondent ID	Comments
C77	I think there is too much emphasis on green issues and anti-car etc. I think access to faster Broadband for the whole (and not just the centre) is vital.
H61	The Plan needs to be focussed on climate change and its implications and risks for life (water and clean air). Everything else, the environmental damage and pollution we cause, the case for higher density, but better, housing, sustainable, shock mitigated power sources, green transport, and well being needs to fit under this overall issue and is one that the nation as a whole must address. What we have seen in the last year regarding CoViD and the lives lost will likely be low compared to the damage human induced climate change will cause (and is already causing).

H70	<p>I care about the future of the whole District, but I care most about the city. I believe it is vital for the Local Plan to enable and promote an economic future for the city based on the creativity of its working population in the arts and sciences, in every field from IT development to architecture to painting, sculpture and music, coupled with Winchester's unique heritage. Those responsible for drawing up the local plan have ample information about what the city's residents want for it, in the JTP consultation of two years ago that led to the Central Winchester SPD, in the more recent Vision for Winchester report to the Town Forum, and in the recent public engagement exercise over the City Council's plans for the regeneration of the city centre. The plan must take account of these views.</p>
H99	<p>The loss of biodiversity and climate change are the most pressing issues of our time. The imperative of addressing these must be central to the new Plan, and given paramount importance. Other considerations (including housing and the economy) are also important, but should not compromise progress to reverse the disastrous trajectory of loss of biodiversity and climate change.</p>
H122	<p>The plan seems unduly complicated. Is that meant to fudge the reality of what is proposed. What all this lacks is a proper map of the area indicating where there are specific and relevant proposals for housing. What we have instead is a list of places where housing COULD TAKE PLACE not where it is proposed that developments WILL TAKE PLACE. So if the opinions expressed about this plan are taken seriously, AND THAT IS A BIG IF, then on the basis of such findings a map needs to be drawn up of the most likely places for development, ruling out absurd proposals given the survey! Clearly damage to natural habitats has to be a central concern as must legal footpaths used by walkers. I am and never have been a NIMBY supporter. Clearly more housing may be required. But that housing must be in areas where it makes sense for them to be placed. So given this kind of feedback a new local plan needs to be constructed making clear how many houses are required and where it is judged they would be best placed given this survey. I have taken part in such inquiries previously in Kent: cf "To Be or Not To Be Philosophical: A Tiptree Inspector Decides" London: Minerva Press 2001 which deals with relevant aesthetic and ecological issues.</p>

H128	<p>The plan is very Winchester town centre centric. Needs to be more about how to help villages can thrive. Also more policies to protect the open countryside around villages. Villages should be kept as separate communities and not merge into each other or Winchester. Whilst we all want to live in a more carbon neutral way, villagers are dependent on cars and there is a great deal in the Plan that looks anti-car. Electric car use is growing, plan needs to recognise this. More people would cycle if the roads were safer. WCC district needs a better cycle and footpath network - when was the last time footpath needs were looked at. I cannot walk or cycle to Winchester safely from Northwood Park, near Sparsholt? More recreational space required in Winchester, existing parks are now very busy post covid and car parks full to access them. Plan needs to make sure developers adhere to rules and put plan to go for zero carbon neutrality as part of any new development. High Street needs more thought. Winchester does not need more shops, but to build back better and attract a wider variety of retail. How can WCC incentivise more independent shops to come here. Make it a destination, not just another identikit high street that could be anywhere.</p>
C482	<p>The local plan site looks pretty but is focused on urban versus rural. It misses and misunderstands the majority of the District population. Where is the focus on jobs?</p>
C521	<p>It is essential that the Local Plan makes efficient use of existing in-fill and no-longer needed commercial and light industry spaces within the city rather than extending an 'urban sprawl' into surrounding farmland and downland. Developments seeking to extend housing primarily onto green space should be opposed.</p>
H136	<p>Hi I work for Abri, a registered provider who operate in Winchester. With regard to affordable home ownership, in the past we have had some challenges in Winchester with ensuring that they comply with the obligations of S106 agreements for with regard to shared ownership properties while also meeting the standard Homes England requirements and lease for the product. The SHMA sets out at page 133 that “affordable home ownership homes are priced to be affordable to households who cannot afford lower quartile house prices”. Whilst we want to ensure shared ownership and other low cost home ownership products are affordable, the current products in use typically “peg” the product against its market value. If this is not recognised and taken into account when considering the approach to affordable home ownership, it makes it very difficult for affordable housing providers to deliver and operate this portfolio. Other local authorities have addressed affordability of affordable home ownership by using the shared ownership model as a starting point and have then adjusted expectations on rent on unsold equity. Thanks for the opportunity to comment</p>

C19	<p>With reference to the recent and ongoing consultation, I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p>
E85	<p>Firstly the local planning draft was very complicated how it was written and presented, for most mortals to understand. The vision of the current plan is not satisfactory and I call on focusing on a new vision, which means delivering sustainable development with achievable objectives.</p> <p>I urge you to take into considerations my views, make option 5 the preferred choice for new sustainable housing and provide a new Green Belt south of Winchester in our new Local plan.</p> <p>We have a young child who loves the green space we have around us at the bottom end of Olivers Battery and this space has been invaluable during this tough time, and with the way we live permanatly changing, it will prove to be vital moving forward.</p>
E95	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. E102	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E105	<p>As I understand it the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, because it was drafted years before the huge changes which have arisen from the COVID-19 crisis and the effect of lockdowns, also the urgent commitment to tackle climate change and the realisation of the need for open space/ nature/ countryside to support mental health and well being. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District.</p> <p>Please do take proper considered account of these points and seriously consider adopting the preferred choice mentioned above for new sustainable housing and provision of a new Green Belt south of Winchester in our new Local Plan.</p>
E110	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was</p>

	<p>drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E119	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs based on current and likely future conditions. The vision in the current Local Plan is therefore not appropriate, as it was drafted some years ago before the huge changes brought about by COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and, although this is important, it only represents one third of the district. Where new homes are built is critical to meeting the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E165	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E167	<p>I have lived and worked in Hursley village in the Winchester district since 2005, a beautiful area and great community where my two children went to John Keble primary school, King School Winchester, Peter Symonds College, and now onto University. I am writing to comment on the local plan, an important document to get consensus from all interested parties to plan ahead where to provide homes for current and future needs. It is my strong opinion after reading the current local plan that it isn't relevant for inclusion in the new local plan. This is for a number of reasons, relating from</p>

- Brexit affecting immigration, prosperity of London and its effect on families moving out of London to live in the M3/Waterloo rail corridor
- Change in dynamic of employment with the COVID-19 pandemic and how this will affect where business, their customers, and their employees are co-located
- The climate emergency that is taking place in this decade faster than scientists had predicted. For my children aged 20 and 24 this is the number one thing that concerns them, and myself by proxy, ahead of other short term economic initiatives. It is the CND of our age.
- The recent sprawl growth in areas like Eastleigh, and more recently Barton Farm, which were promised as solving housing needs but have created traffic problems, crowded schools with long journeys for parents out of district, waiting lists at doctor and dentist surgeries.

While the 2030 document focuses on the city centre of Winchester (which is a beautiful place I visit regularly) I believe the document is dated.

The dynamic of the centre itself has changed massively with COVID-19 and Brexit challenges. Each time I visit more shops seem to be closed, while some others like cafes are thriving. When the pandemic lockdown is over it's too early to predict what the town centre of 2022 and beyond will look like,

- Will the town need more paved dining areas outside in the high street ?
- Will it need the current one way system two lane roads like North Walls or St. George's Street to be permanently one lane with wider pavements and cyclepaths ?
- Will the market need to be permanently in Middle Brook car park,
- What will Silver Hill post COVID-19 look like with more people shopping on-line and using town for experience trips ?
- What will the effect of the new Bar End leisure centre have on River Park and people visiting town as part of a gym/swim trip who are now at the other end of town ?

Growing up in a city (I am London born) I know how easy it is to think the capital is the centre of everything around it like a solar system's Sun, however Winchester town only represents a portion of the whole district. Many people who live in town do so because the surround areas are so green and accessible, for cyclists, hikers, dog walkers, rambles, and everyone else who comes here to enjoy the beautiful Hampshire countryside from which you can travel along any compass point and be immersed in one of the treasures of the United Kingdom. This is one of the reasons why Winchester gets voted as one of the best places to live so regularly, not because the town is so great but because it is surrounded by such beauty.

Winchester city council has presented four options for housing, growth, based on three areas and one strategic

	<p>allocation with no specific location provided. These area boundaries are not clearly defined on a map so I am puzzled. Each option differs in allocation of housing and most importantly do not make best use of previously developed (aka brownfield) land. It appears to me that they imply a sprawl of Winchester town through Oliver's Battery to Hurley and Compton.</p> <p>I am in favor of a fifth option. This would</p> <ul style="list-style-type: none"> <li>• work alongside the existing housing supply (that stands at over 11k homes),</li> <li>• use brownfield sites minimizing the need to use greenfield sites and preserve the countryside</li> <li>• redevelop and rejuvenate the city center to address the challenge of the shift in how people shop and work from home</li> <li>• use existing areas in the south Hampshire urban areas closer to the large cities, reducing traffic and avoid more urbanization</li> <li>• have small developments within market towns and villages that remain in character</li> </ul> <p>Growing up in London I was always inspired by its Green Belt, and this helped to create the boundary between town and country. Were the same to be done here, with a Green Belt covering land to the south west of Winchester town it could help protect the rural parishes (that serve the town and are part of its fabric), it would allow the town to be shaped and crafted within its boundary (something that began with the Romans and is part of the DNA of the city) and it would require developers to consider sympathetic development of previously developed sites making use of infrastructure. Instead of which the lack of this option has allowed developments like Royaldown, a purely speculative dice roll by a farmer who didn't grow up in Hampshire and inherited the land, to tarmac over thousands of years of history for financial profit, creating something that is based on new roads, more cars, and unplanned urban sprawl.</p> <p>When I visit other cities like Andover or Basingstoke that have their old districts and new development so jarred together I often wonder what small hasty planning decision resulted in the way things became, rather than a measured and valued and public inclusion in the best way forward for how everyone can be part of their future. Planning is the most important thing you do, and I hope you take account of my views and make open 5 the preferred choice for new sustainable housing and also provide a Green Belt south of Winchester in a new Local Plan.</p>
E187	<p>This email is our response to your consultation “Your Place Your Plan” and the provision of Green Belt as part of the proposed new Local Plan.</p> <p>We understand that the function of a Local Plan is to agree how and where to provide homes for current and future needs. The current Local Plan is not appropriate for inclusion within the New Local Plan, as it is out of date and has not</p>

	<p>kept pace with the Climate Change Agenda nor the impact of the current Covid 19 Pandemic. We would challenge the statistics that are being used to drive the increased housing numbers and seek clarification and justification of these figures, as they drive the scope of the overall housing expansion.</p> <p>We urge you to take account of our views and make the above Option 5 the preferred choice for new truly sustainable housing and also provide a new Green Belt to the south and south-west of Winchester in our updated Local Plan.</p>
C35	<p>First of all I would like to thank you for giving us opportunity to express my own opinion and make you aware of what for us residents is the most important.</p> <p>The vision in the current Local Plan is not appropriate as as far as I know it was drafted some years ago before the huge changes from COVID-19 and climate change issues.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local</p>
E216	<p>I feel that the new Local Plan should reflect the changes that have come about from Covid 19 and the urgent need to tackle climate change. Whilst recognising the need for new housing, the proposal to build 5,000 new homes etc. between Oliver's Battery and Hursley would run counter to the need to address biodiversity and climate change. Consideration should instead be given to developing brownfield sites and previously developed sites such as Sir John Moore Barracks. Greenfield sites must be protected. The chance to develop city centre sites should also be considered as we see the changing role of these centres. Small developments of market towns and villages should be considered as long as they are in keeping and meet the needs of the local communities.</p> <p>A new Green Belt to cover the area to the south west of Winchester should be the way forward. This would prevent an urban spread which would impact adversely on transport, road infrastructure, pollution and would lead to the loss of important wild habitat. As a resident of Hursley and a keen and regular walker I very much value the countryside around me. I have also noticed a very significant increase in the number of people using and appreciating the wonderful paths and bridleways in this area since the onset of the Covid pandemic.</p> <p>There would be so much to permanently lose if this area were to be subject to a large scale and inappropriate development such as Royaldown. Please take into consideration my views and do consider Option 5 for new and sustainable housing with provision for a new Green Belt south of Winchester in drawing up our new Local Plan.</p>

E228	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. E248	<p>The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan. I recently became aware of investigations on South Winchester Golf Course in preparation for over 1000 houses in the next 10 to 15 years. The suggestions made above also apply to this development; south Winchester needs protection from housing, issues with transport, water use and disposal and likewise with this new potential proposal I do not think it wise on any count.</p>

E249	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E254	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E258	<p>As residents of Winchester District (Stoke Charity) for the past 12 years we do not support the development of any new towns in the countryside and therefore oppose Option 3 as set out in the consultation document.</p> <p>We find it strange that the Council would wish to consider this option as it contradicts key points underpinning the existing strategic approach including:</p> <ul style="list-style-type: none"> <li>• “.....many villages that fall within the rural area are to remain viable settlements offering where possible a range of local services and facilities, and be allowed to grow to respond to local needs, whilst retaining their individual identity and rural character.”(existing Core Strategy Vision)</li> <li>• The importance of protecting the countryside and concentrating development in the most sustainable locations (Policy MTRA4 in the current Local Plan).</li> </ul> <p>Any new towns of the size required to meet the housing target would do irreversible damage to the already dwindling areas of natural resource in our area. This natural resource supports biodiversity, the rural economy, including agriculture and recreational uses, so vital for community health, wellbeing and sustainability. This must be protected.</p>

E278	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. E286	<p>The most important function of a Local Plan is to establish how and where to provide homes to meet the needs both current and future, of the local community. The vision of the current Local Plan is unsuitable for forming the basis of the New Local Plan as it was drafted some years ago and inevitably things have changed considerably since then. For example we now have to work through the consequences of the Covid pandemic and the rapidly increasing need to tackle climate change with vigour. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and whilst this is important it only comprises a minority portion of the district. The careful siting of future homes is essential to meeting the needs of the wider community, including the market towns, rural communities and the National Park.</p> <p>I urge you to take my views into consideration and make the option set out above, "the 5th Option" the preferred choice for new sustainable and responsible housing and provide for a new green belt south of Winchester in our new Local Plan.</p>
E292	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. E322	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and, although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new, sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E330	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p>

	<p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E333	<p>I am writing to you as a resident of Oliver’s Battery and as someone who has lived in Winchester for over 40 years. I am very concerned about proposals to develop the countryside around the city and particularly in the area south-west of Winchester. I strongly object to the proposed development known as ‘Royaldown’ and also to any housing development</p>

	<p>on the South Winchester Golf Club site. I hope that you will take my opinions into account in connection with discussion of the new Local Plan.</p> <p>I hope that you will take account of my views and make this fifth option the preferred choice in our new Local Plan.</p>
E343	<p>Regarding the Local Plan, our comments are as follows:</p> <ol style="list-style-type: none"> <li>1. PAGE 8. Development should take place in South Hampshire, south of Winchester. Market towns and villages falling in rural areas should only be allowed to grow to “satisfy local needs” whilst retaining “individual identity and rural character.”</li> <li>2. PAGE 10. ITEM 3. To avoid endless argument why not institute local referenda as in Switzerland?</li> </ol> <p>ITEM 5. Anti car bias; what about older people and most adults who are time-short?          ITEM 6. This sounds much like a talking shop.</p>
E344	<p>I understand that you are currently conducting a consultation called Your Place, Your Plan. I would like to express my views towards this consultation.</p> <p>I understand that the Local Plan is intended to determine how and where to provide homes for current and future needs. The current plan, which was drafted several years ago, has been superseded by time, the impact of COVID 19 and the commitment to tackling Climate Change. Clearly the new Plan must meet the needs of residents across the whole District including our market towns, the National Park and our rural communities.</p> <p>I urge you to take account of my views and to make the alternative Option 5 the preferred choice for new sustainable housing and to include the new Green Belt south of Winchester in the new Local Plan.</p>
E368	<p>We are proud residents of Winchester. Both of us know the area to the south of Winchester very well. Previously my wife, Liz, lived in Chandlers Ford and worked in Winchester in St Pauls General Practice near the station. As a result, she is very familiar with the countryside and the congested country roads in the Chandlers Ford and Hursley area.</p> <p>Clearly one of the most important parts of the new Local Plan concerns the provision of housing for present and future needs. The previous plan was drafted before the changes arising from the COVID-19 Pandemic and the commitment to tackle climate change properly. The location of new homes must meet the needs of residents across the whole district. On p. 39 of ‘Your Place Your Plan’, looking forward to 2038 the number of houses needed over, and above current housing commitments is 2,692. The suggestions of certain developers, e.g., for Royaldown or Micheldever Market town dwarf this amount.</p>

	<p>We urge you to take account of our views and make option 5 the preferred choice for new housing development and establish a new Green Belt south of Winchester in the new local plan.</p>
E389	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E399	<p>I understand that you are currently conducting a consultation called Your Place, Your Plan. I would like to express my views towards this consultation.</p> <p>I understand that the Local Plan is intended to determine how and where to provide homes for current and future needs. The current plan, which was drafted several years ago, has been superseded by time, the impact of COVID 19 and the commitment to tackling Climate Change. Clearly the new Plan must meet the needs of residents across the whole District including our market towns, the National Park and our rural communities.</p> <p>I urge you to take account of my views and to make the alternative Option 5 the preferred choice for new sustainable housing and to include the new Green Belt south of Winchester in the new Local Plan</p>
E499	<p>In our opinion, the vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We ask you to propose option 5 in the new SHELAA and to make it the preferred choice for new sustainable housing, and work with all other concerned bodies to establish a new Green Belt south of Winchester.</p>

E528	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E546	<p>We understand the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We URGE you to take account of our views and make Option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan. We believe the area surrounding would be damaged by such a large development let alone the impact on roads, nature and noise and of course the Nitrate issue on developments.</p>
E563	<p>Along with many others we believe that the need for homes and associated infrastructure support is a crucial feature of the Local Plan. That the existing Plan requires updating is irrefutable. We believe it should also consider the needs and situation of the entire District and accommodate changes to commerce and climate.</p> <p>We urge you to take account of our views, make a fifth option along these lines the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E572	<p>I think the most important part of a local plan is to provide a pleasant, environmentally friendly area for residents and to provide homes for our future needs.</p> <p>The vision in the current local plan is not appropriate .</p> <p>There have been huge changes in thought lately advanced by COVID and environmental concerns.</p> <p>The Winchester town forum 2030 focuses on Winchester city centre which represents only a third of the whole area.</p>

	<p>A fixed Green belt should be placed around Winchester to stop the sprawl of development on greenfield sites. For example Abbots Barton is a sprawling development of boring buildings with no architectural features which does not fit in with the character of Winchester at all or add anything interesting to our beautiful town. Such a development could be placed anywhere in the UK. Moreover these big developments do not include garaging under, or included in, the building and encourage more car use with people driving along the M3 etc to workplaces often not even in Winchester.</p> <p>Brownfield sites must be used first for development.</p> <p>Many areas in Winchester will be available to change to housing now because of shop closures. So will Sir John Moore barracks and even areas of Winnal.</p> <p>Whole areas of low level building around the outskirts of Southampton for example, would benefit from redevelopment. Any provisions for park and ride car parks and lorry or coach facilities for Winchester should be situated right beside the motorway not building more roads across countryside.</p> <p>If more housing is really needed, over and above the hundreds of homes already given planning permission, these should be accommodated in small developments in keeping with their local area and approved by local parish councils. A large scale development like Royaldown would ruin the whole area of Winchester.</p> <p>A sprawling mass of housing, lorry and car parks etc, totally environmentally unfriendly, out of character for the area and showing a real lack of imagination from developers. Please do not let developers take the cheap, easy way and just concrete our countryside.</p> <p>Please take account of my views and choose to protect Winchester and only allow development which fits in with our beautiful area.</p>
E583	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. E586	Document attached to email

E595	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>You will be correct in that you have seen the wording of this letter before. I have used the template as I wholeheartedly agree with every point it makes and could not put it better myself. I am not “getting on the bandwagon” – it is my heartfelt belief that to do anything other than Option 5 would be a travesty and will change Winchester and its beautiful rural areas forever. It will become just one big sprawl of houses and will lose much of its charm and appeal to people – both to live here and to visit here. Please do not let it happen.</p>
E619	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. 	<p>Please please please do not add any further traffic to Winchester and protect the environment.</p>
<p>E678</p>	<p>Document attached to email -</p> <p><b>Existing Core Strategy Vision</b></p> <p>3. Crest Nicholson supports that the existing vision remains broadly relevant and that housing delivery should be identified in areas where there is existing strategic and social infrastructure to support and enhance the existing settlements in the district of Winchester, particularly in the southern fringes of the district and for the market towns and villages that fall within the rural area.</p> <p>4. Winchester Town itself is a hub as a main employment, retail, and leisure centre for both its residents and those in nearby villages. Urban areas on the southern fringes of the District have a strong functional relationship with the Southampton/Portsmouth conurbation, rather than Winchester. The remainder of the District has dispersed villages and market towns which vary in their size, character, and functional relationships with each other.</p> <p>5. As is stated in the existing vision, development in the southern fringes of the district is needed to provide homes, jobs, physical and social infrastructure whilst creating a strong sense of community identity and protecting nearby environmentally sensitive sites, to further extend the communities in this part of South Hampshire. The settlements within the southern fringes of the district are some of the most sustainably located, with access to local areas of education, employment, and leisure along the M27 corridor and the rail line, connecting these settlements to each other as well as Southampton and Portsmouth.</p> <p>6. The market towns and many villages that fall within the rural area still, as in the previous plan period, require new homes to be delivered to support local services and facilities. All of the eight small towns/larger villages act as a focal point for their own communities and also to a certain extent the smaller villages surrounding them. All these local communities wish to maintain and improve local facilities, including public transport. They acknowledge the importance of providing for local housing needs, especially for affordable housing and older persons' housing, with some limited growth for economic purposes.</p> <p><b>Local Plan Objectives</b></p> <p>7. Crest Nicholson would like to highlight a need for a greater focus on affordability, tenure type, and mix of housing to be delivered in the district as part of the sustainable economic development objectives. Housing stock is the most</p>

	<p>appropriate indicator of housing supply and housing need. Where past housing delivery has not met housing need, this results in suppressed household formation in younger age cohorts and an imbalance between housing supply and housing demand. In turn, this has influenced the increasing gap between average incomes and average house prices.</p> <p>8. If we draw upon the evidence from the Office for National Statistics, the median affordability ratio for Winchester District currently stands at 12.3 based on 2020 data. This is higher than neighbouring districts: Farham (10.4), Eastleigh (9.6), Test Valley (9.8) and Basingstoke &amp; Deane (8.8). There are pressures on the affordability of housing in Winchester District and there should be an objective to stimulate the provision of "affordable" market housing, by increasing housing supply, to bring the aspiration of homeownership back within the wider reach of local people. This is important to develop and sustain a mixed community to support economic activity and growth.</p>
E727	<p>As a long-term resident of Hampshire and the district and I am pleased to have an opportunity to be contribute to the formation of the local plan. I must say I found the online form quite daunting and the information attaching quite dense. It was not I think particularly conducive for the average resident to contribute. As a consequence I have decided to send a personal note about the key issues that I believe most relevant</p> <p>Importantly I believe that the central function of a Local Plan is to agree how and where to provide homes for our current and future needs. All the better if it is set in the context of a compelling and resident driven enduring vision for the district. The vision in the current Local Plan is in my opinion not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document (also referred to) only focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities. I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
C342	Questionnaire attached to email
E736	<p>A Local Plan should agree how and where to provide homes for current and future needs. The vision in the current Local Plan is outdated owing to COVID 19 &amp; the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre which represents one third of the district. Location of homes must meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p>

	<p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in a new Local Plan.</p>
<p>E739</p>	<p><b>Vision</b>  <b>Vision for the Local Plan – Consultation Question (Page 11)</b>                  2.1 The current spatial planning vision as set out in Section 2 of the current Winchester Local Plan Part 1 (2013) highlights the special nature of the District which is characterised by its historical and cultural heritage, rich countryside and the diverse population and business sectors which operate in the area.                  2.2 The vision confirms that the County Town of Winchester needs to meet its housing and community requirements, with market towns and villages that fall within the rural area to remain as viable settlements offering where possible a range of local services and facilities, and be allowed to grow to respond to local needs.                  2.3 Whilst the above is supported, it is considered that the vision should show a commitment to Winchester District meeting the housing and community needs that exist in the area and contribute more widely to a sustainable Hampshire.                  2.4 Winchester is one of the authorities within the Partnership for South Hampshire (PfSH) area. The PfSH is in the process of drafting an updated form of the current Spatial Statement (2016) which identified the ability of other authorities (such as Winchester) within the PfSH area to contribute to meeting unmet housing needs from those areas within the PfSH that are subject to either a very high level of housing need or are otherwise constrained due to environmental and sustainability factors. The sub regional collaboration is also highlighted across a number of other important factors such as infrastructure, highway improvements and strategic employment locations as well as the identification of key strategic countryside gaps.                  2.5 Therefore, it is considered that the vision should have a wider outlook than just on Winchester, and needs to consider the strategic context, and the role Winchester has in delivering growth as part of a wider sub regional group. This would take into account the commitments made in the PfSH Spatial Position Statement and the requirement for Winchester to meet wider growth needs across Hampshire.                  2.6 It is also considered that the work carried out as part of the ‘One Great Win’ Winchester Vision Doc 2020-2030 should be considered and incorporated where appropriate into the vision for Winchester District in the new Local Plan. Of particular note is the cultural work done and the acknowledgement of the 15-minute city idea which gives greater credence to the city centre as a public park or social area, easily accessible for local residents. This lends itself to the introduction of a requirement to encourage modal shift within the vision, acknowledging the case for towns and centres to adopt more practices which encourage a 15-minute city approach.</p>

	<p>2.7 Further, in light of the ongoing climate emergency and commitment to carbon neutrality, it is considered that the vision for Winchester should reflect this position, and draw upon the work conducted by the Winchester Action on Climate Change Group (WinACC), whereby Winchester makes a commitment within its vision to helping to deliver a zero carbon Winchester District.</p>
E741	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

E845	<p>Document attached to email –  <b>Vision for the District in 2038</b></p> <p>The Vision set out in the Core Strategy was drafted some years ago and appears dated for a number of reasons. Whilst the focus on housing, tourism and employment might still be appropriate, the challenges facing the District are significantly different today: the decision to accelerate the response to climate change; the decision of the UK to leave the EU; and the effects of the Covid pandemic on working, shopping and social behaviours have all changed the context markedly. A new Vision should have at its centre the delivery of sustainable new or re-development, which should be consistent with the NPPF and with the UN sustainable development goals. A coherent and consistent Vision</p>

	<p>for the whole District should be created. From this, objectives can be developed to address specific issues in different parts of the District, retaining local character and individual focus and avoiding a “Winchester-centric” view. Winchester Town is only one-third of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important “hub” or centre, in particular for the northern part of the District for employment, shopping and social/ entertainment activities, and it should be promoted as such. However, it must also be easily accessible to “out of town” as well as “town” residents. Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester Town should be sought to balance the Town Forum 2030 views.</p>
<p>C469</p>	<p>In your current core vision you have said that ‘Winchester District is a special place characterised by rich historical and cultural heritage and attractive countryside and is home to a diverse population and a variety of business sectors’.</p> <p>If so current development does little to preserve this situation. In particular new build is often of poor character, including business developments, and there has been limited preservation and enhancement of city centres. Instead there has been development of poor visionary quality much on green field sites.</p> <p>The current plan states that the demand for retail will increase; while I cannot predict, the current trend appears to be in the reverse direction. There are real threats to city and town centres as there may be less retail in the future and much ongoing development has been peripheral to these centres.</p> <p>There are threats to housing areas that are being developed and that have been completed - no cycle paths, no communal grass areas or community project allotments, and poor housing quality with no sustainable development built into each home. Some other UK councils are also blind to these needs; though all could have been provided at no cost to councils, without reduction in housing quota. Barton Farm is a good example of these extraordinary oversites but many smaller developments in the mid and East part of the area are included. Policy WT2 is not sufficient to provide quality developments.</p> <p>Green fields are too peripheral to be helpful in maintaining the desire for urban community and current developments have inadequate planning to encourage social and neighbourhood integration for all ages.</p> <p>It is a grave and irreversible sin to build on productive farm land when the growth of the UK population depends on this for food and energy crops. Sufficient brownfield sites are known and with ingenuity could be developed.</p>

	<p>In relation to the Royaldown development - the centre of this development is Down Farm - named because it is on the South Downs which extend West nearly to the A3057. It is a paradox that the the South Downs National Park Authority protect most but not all the South Downs and that parts not included are seen to be open to development. It remains quality agricultural land. The solar farm proposed in the Royaldown brochure is clearly nonsense as the example of crops grown on the same fields is not applicable to the UK and the field in question has been used for premium grazing in recent years, because of its lesser quality for crops. It would help the Council if proposals were supported by published evidence. The information about this solar farm is so misleading that it must question other areas of the proposal.</p> <p>Winchester City Council has presented four options for housing growth. None reflect the councils current core vision.</p> <p>Development along the lines of the proposed 5th option would go someway to address this vision.</p> <p>These points include</p> <ul style="list-style-type: none"> <li>- using brownfield land and land requiring redevelopment, in innovative ways to optimise design, sustainable futures, social cohesion, and urban centres.</li> <li>- preserve the South Downs and productive agricultural land; if necessary identifying areas of Green Belt.</li> </ul>
C588	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. 	<p>COVID-19, and the commitment to tackle climate change, therefore it is no longer appropriate/fit for purpose.</p> <p>It is also worth being mindful of the very unstable global economic and political situation, the almost unbelievable speed of history; one generation from war to friendship — who can guarantee that the opposite doesn't happen?</p> <p>Land is a non-renewable resource. Once the green fields have been built on, there is no going back! Brexit and climate change threaten the norm and it is expected that greater self-sufficiency and food security will be crucial to our future.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>The truth is: the natural world is changing. And we are totally dependent on that world. It provides our food, water and air. It is the most precious thing we have and we need to defend it." (Sir David Attenborough)</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
C461	<p>We have lived in Oliver's Battery for 24 years and our property neighbours the proposed Royaldown site. We are members of the Save South Winchester Campaign Group and fully support its responses to WCC's Your Place Your Plan consultation.</p> <p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district.</p> <p>Where the homes go is essential to meet the needs of residents across the whole District, including our market towns,</p>

	<p>the National Park and rural communities.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E882	<p>I believe that the most important function of this Local plan is to agree provision of housing for current and future needs, as well as aiming to preserve the green belt south of Winchester.</p> <p>The vision in the current Local Plan was drafted some years prior to the changes seen with COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Winchester City Council has presented four options for housing growth, based on three“ spa- tial areas” however, these area boundaries are not clearly defined or shown on a map.</p> <p>I believe these options either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>Option 3 in particular would take all the countryside between Oliver’s Battery, Hursley and Compton, damaging its character, its biodiversity, creating huge additional traffic movements and aggravating existing flood risks in Hursley and Otterbourne.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District (over 11,000 homes.)</li> <li>• Use brownfield and previously developed sites across the District, (eg.Sir John Moore Barracks) minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> </ul>

	<ul style="list-style-type: none"> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and closing of settlement gaps, thus preserving the unique and beautiful setting of the City. It would force development onto brownfield and previously developed land including Winchester centre making maximum use of existing infrastructure.</p> <p>A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped. The risks to nearby settlements of runoff floodwater, to areas that have struggled in recent years of heavy rainfall would also be avoided if these higher ground areas draining towards the lowlands were not largely covered in housing which necessarily brings with it a substantial loss of permeability in the ground surface.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E926	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p>

	<p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

<p>E1003</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
<p>E1004</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. To this end, I think that the vision in our current Local Plan is not appropriate for inclusion in the new one, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my view, and consider an option 5 for new sustainable housing and the provision of a new Green Belt south of Winchester in our new Local Plan.</p>
<p>E1005</p>	<p>Document attached to email</p> <p><b>Vision for the Local Plan Is the vision in the current local plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b> 2.1 The existing Core Strategy Vision recognises the need for market towns and large villages to remain viable and that they should be allowed to grow to respond to local needs. Bloor Homes supports this part of the Vision but is concerned that the needs of market towns and villages are not fully considered in the consultation document. Ensuring market towns and villages remain viable is key to ensuring that the settlements remain sustainable in the future. Appropriate growth also needs to be directed to these settlements to ensure the Vision can be achieved. 2.2 Market towns and villages need to be able to grow to support the shops, services and facilities that they offer existing and future residents. The Vision and the plan should take forward this aim to ensure that the market towns and villages are allowed to grow in the period up to 2038. This is particularly relevant</p>

	<p>over the coming years in a post-Covid world. <b>Are there elements of the Winchester Town Forum’s Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?</b> 2.3 The six critical values put forward in the plan are Winchester Town focused, as you would expect given their origin. Whilst the aims are admirable, the plan needs to consider the needs of the district as a whole and the vision needs to reflect the different characteristics of the wider district, not just one part. Items that may be achievable at a city level may not be achievable at a market town or village level. The vision needs to ensure it provides an all-encompassing vision, not aims and objectives that may be unachievable at a local level. 2.4 It is important, however, to acknowledge that just because market towns and villages may offer less choice in terms of services and facilities provided, in comparison to Winchester City, it does not mean that they cannot grow in a sustainable way. The Vision needs to support growth in the market towns and villages to enable these existing smaller settlements to contribute to the Plan’s aim of tackling climate change. Recognising that enabling these settlements to grow and deliver additional homes will ensure that long term prosperity of those settlements is vital to ensuring new and existing residents are able to maintain access via non-motorised modes to local services and facilities.</p>

<p>E1008</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I lived near Winchester for many years which is one of the great historic cities of Britain. The present policy of boosting the economy with unaffordable and excess development for purely market reasons is dire, given our environmental stress in the UK.</p>
<p>E1010</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities. I do feel that this proposal eats away at much valued countryside which we all need to feel a sense of not being hemmed in by housing and urbanisation, and to preserve a very pretty and important part of the District. Although I would not be in favour of development at Micheldever, their links to the motorway and railway provide offer a more compelling justification to allow development than Royaldown. If this is allowed to go ahead it will further encourage the encroachment of a sort of Solent City into rural Hampshire. I would consider this to be a considerable loss of amenity.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

E1025	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Water Sourcing and Supply</p> <p>While it appears that sustainability issues around water sourcing and supply are regarded as beyond the purview of certain aspects of planning, it would seem logical to insist that any part of an organisation entitled 'Strategic Planning Department' should take account of the precarious situation we find in Hampshire with regard to water supply under current demand. The chalk aquifer, that is the source of nearly all water supplies in Hampshire and surroundings, is now regularly depleted through over abstraction to the extent that the precious chalk streams and rivers in the area are suffering seriously reduced flows and/or periods of drying. This process of depletion is set to destroy the delicate ecology of the Meon, Itchen and Test catchments and the surrounding countryside. Therefore, before any significant development is considered, it should be a 'boiler plate precondition' that strategic development of the water supply infrastructure is undertaken for alternative water supply through the building/commissioning of reservoirs and re-treatment or de-salination plants.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

<p>E1029</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. <p>E1030</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>In general terms, there is a worrying trend towards unsustainable development on greenfield land in and around Winchester. As a historic city situated on the edge of a national park with oversubscribed schools, a small central area with congested one-way traffic system and limited local jobs, more housing development seems completely wrong headed.</p> <p>The current large scale development of Barton Farm is a long way from reaching any sort of capacity and some of the new proposals - such as Royldown - are thus unnecessary. Moreover, Royaldown (to take one large scale example) is about as far away from being a sustainable, climate friendly development as it is possible to be. Given the location, nearly all residents there would require cars -thus contributing to already congested roads and requiring new areas of green belt to be bulldozed for suitable road access.</p> <p>Winchester City Council needs to offer a sustainable vision that is centred on brownfield development and an acceptance that development does not need to be centred on ever more housing and a growth in population.</p>

	<p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan. I will also be writing to the local MP and councillors.</p>

Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, and make option 5 the preferred choice for new sustainable housing with provision for a new Green Belt south of Winchester in our new Local Plan.</p>
E1044	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1048	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. It appears to me that the Winchester Town Forum’s Winchester 2030 document focuses far too much on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1052	<p>As a member of the general public with no experience in complicated planning matters, I am compelled to comment on the content and design of the Winchester District Local Plan consultation process. Whilst I understand that this is your</p>

	<p>chosen method of consulting on the strategic issues and priorities for the new local plan, I must stress that this is an extremely difficult platform to navigate and accurately reflect my views through the design of the questions. I consider myself a reasonably literate person and have spent a great deal of time trying to unpack the lengthy process but have finally decided to send you an email response instead. Undoubtedly, there will be ordinary members of the public who will be unable to express their opinions and be overwhelmed by the whole process. This is far from a fair democratic process in action.</p> <p>I sincerely hope the below will count as an official response.</p> <p>It is my belief that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and WCC's commitment to tackle climate change. The plan outlines too many objectives, some lacking in consistency and many are written in such subjective terms that measuring progress of completion will be challenging, if not impossible.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre which only represents one third of the district. Where homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in a new Local Plan.</p>
E1059	<p>I have been a resident in the Winchester area since birth (1966) and a resident of Compton Down for the vast majority of my childhood and adult life. There have been significant changes over the years but, generally, the 'integrity' of Compton Down and the local villages, has been maintained. This is now under significant threat, to the considerable detriment of all Winchester residents.</p> <p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents</p>

	<p>across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1061	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. C520	<p>Firstly I have read the research and have reviewed the evidence base There are key tenets the council wish to observe , not least</p> <ol style="list-style-type: none"> <li>1. Biodiversity and nature conservation</li> <li>2. Carbon neutrality</li> <li>3. Conserving and enhancing the historic and rural environment</li> </ol>

	<p>4. Promoting sustainable transport and active travel – the 15min city concept</p> <p>The existing core strategy has evolved over a number of years and contains well rehearsed and thought out policies that fully reflect the requirements of Winchester and its electorate as part of the policy framework that have been successfully defended by the council in many planning appeals by developers for significant greenfield developments including: MTRA4, CP15,CP16,CP18,CP20,DM5,DM23 and DM24 as indeed set out as important in your own strategy document for this consultation .</p> <p>I also note that under the current plan the council are well ahead of the curve in terms of catering for housing provision to 2038 and indeed from your own policy document taking into account the areas already identified for housing the council may only need to find an addition 10% provision over and above the current plan .</p> <p>Based on your policy documents research and consultation and having regard to existing policies that additional 10% should be found from existing brownfield sites not greenfield sites as per the suggested option 3</p> <p>It is for that reason that I firmly oppose Option 3 as this simply flies in the face of the existing policies and contradicts the stated aims of the consultation and the research carried out for same set out above .</p> <p>Significant building on greenfield rural land will cause significant harm to the natural environment , biodiversity by removal of significant areas of green space and also destroy rural and historic environments</p> <p>It also sets a dangerous precedent for the future and destroys the policy of maintaining and protecting strategic settlement gaps such as that between Winchester and Basingstoke.</p> <p>In addition any new settlement cannot be carbon neutral given the need to build significant infrastructure for transport services etc etc where simply none exists in addition such new large scale settlement remote from Winchester will simply promote commuting and increased car usage as opposed to active travel -15 min city concept as the distances are simply too great.</p> <p>In summary I firmly reject option 3</p>
E1069	Document attached to email –

	<p><b>Vision for the Local Plan</b>  <b>Is the vision in the current local plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b></p> <p>2.1 The existing Core Strategy Vision recognises the need for market towns and large villages to remain viable and that they should be allowed to grow to respond to local needs. C534	<p>I'm writing to raise my concerns about the Local Plan. The vision in the current Local Plan is outdated, as it was drafted prior to the huge changes from COVID-19 and doesn't go far enough to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1109	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific</p>

	<p>location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>The latter destroys links between local communities, ancient footpaths and is ecologically unsound. It unnecessarily destroys farmland and despite its suggestions is not confined to valleys, is not in any way sustainable.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1114	Document attached to email – <b>The Vision</b>

	<p><b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b>                  The City Council should develop a new vision for Winchester which reflects the housing and development needs of the District for the next 20 years.                  The vision should recognise the need to meet the full objectively assessed housing need. It should place substantial emphasis on the need to deliver affordable housing across the District and to improve affordability of housing in sustainable locations and the rural areas where there has been a locally identified need and a historic under-delivery of new homes. Furthermore, it should acknowledge the benefits of housing which brings forward associated environmental benefits.</p> <p><b>How should the findings of the Winchester Town Forum’s Winchester 2030 Vision (which only covers the five town wards) be used to help inform a vision for the Local Plan that covers the whole of the district?</b>                  Wates has no comments to make at this time.</p>
E1116	<p>Document attached to email -                  The Winchester District Local Plan consists of Part 1: Joint Core Strategy (adopted March 2013) which sets out the long-term strategic vision, objectives and the key policies needed to achieve sustainable development up to 2031 and Part 2: Development Management &amp; Allocations (adopted April 2017) which provides detailed development management policies and no strategic site allocations.                  In 2018, the Council launched a new Local Plan preparation process to cover the period 2018-2038 and account for the future needs of the District and accommodate the Council’s climate change agenda.                  The sections that follow below include specific comments from Gladman on the Council’s preferred options covering a range of the topics and questions that have been posed.</p>
E1117	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

<p>C515</p>	<p>Crown Golf's responses to the questions posed within the Strategic Issues and Priorities Consultation are set out below. A full online submission has also been made for completeness.</p> <p><b>Chapter 3: Vision for the Local Plan</b></p> <p><i>Q: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed? Are there any elements of the Winchester Town Forum's Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?</i></p> <p>5.2. It is considered that there is some scope to better and more formally acknowledge the preeminent role of Winchester in delivering housing for the District within an updated vision. As detailed in the Council's Settlement Hierarchy Background Paper, Winchester is at the top of the revised hierarchy, being defined as a 'Town', with a score of over 50. It follows, therefore, that Winchester should be the principal focus for new development within the District being, de facto, the most sustainable settlement.</p> <p>5.3. The current Local Plan Spatial Strategy focusses a need for areas at Waterlooville and Whiteley on the southern fringes of the district need to provide homes, jobs, physical and social infrastructure. With these strategic development areas having now been consented and being built out, Crown Golf would question whether continuing with a specific South Hampshire category is warranted and in fact the Vision has now evolved to include a development hierarchy of Winchester the focus, then Market Towns (which includes the consented strategic developments in south Hampshire) and finally rural villages The importance to role/contribution of the Market Towns in delivering sustainable and proportionate housing growth should be strengthened, reflecting their respective scores within the revised settlement hierarchy whilst the main focus for growth is centred around Winchester.</p> <p>5.4. The revised NPPF highlights that plan making should enable the delivery of sustainable development, and should positively seek opportunities to meet the development needs of the authority area. The emerging Local Plan is therefore an opportunity for WCC to be more ambitious in its Vision for the District.</p> <p>5.5. The recent NPPF Consultation (January 2021) proposed changes to one of the extant NPPF's central elements (The presumption in favour of sustainable development). The draft text would see a shift in focus from the extant requirement for LPAs and plans to merely 'positively seek opportunities' to meet needs (and ensuring sufficient flexibility to adapt to rapid change), to a more explicit direction to align infrastructure investment with sustainable growth that improves the environment and addresses climate change. The consultation draft states that, for plan making this would mean:</p> <p><i>'all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects'</i></p>
-------------	--

	<p>5.6. There is a clear policy movement within central government toward locating development in the most sustainable locations. Future iterations of the WCC local Plan should seek to directly align with the aspirations of the emerging NPPF. <b>Crown Golf April 2021 16</b></p> <p>5.7. As detailed in the SHMA, the delivery of (and access to) affordable housing is very important for younger (single and family) households and will be important in ensuring that a balanced population profile is maintained in the District. The mix and choice of housing within the Winchester Town sub-area is relatively restricted for family sized households with a higher than average proportion of 1 and 2 bedroom properties; and crucially there are limitations as to the affordability of larger properties in the context of continued growth in sales prices and rental values across all three sub-areas over recent years.</p> <p>5.8. If housing accessibility for younger households continues to be constrained, thus inhibiting their ability to move to or stay within the local area; this could harm the economy (through affecting the ability of employers to recruit) and may lead to unsustainable longer-distance commuting patterns. Crown Golf would endorse specific recognition of the needs of specific groups in the population within the Council’s Vision. Strategic developments are best placed to deliver a balanced community and range of tenures.</p> <p>5.9. Local planning authorities should positively seek opportunities to meet the development needs of their area (para. 11, the NPPF). It is essential that WCC establishes the appropriate level of need to be delivered within the District. In accordance with the key principle of the NPPF, development should be focused in the most sustainable locations. The standard methodology housing need figure is the minimum starting point which also needs to consider employment growth, and balancing homes and jobs. This is critical for Winchester town which, as the main employment centre, should be the focus of more housing to positively plan for economic growth. Large-scale housing development in sustainable locations can and should play a significant role in meeting the future housing needs of Winchester District. This is acknowledged at a national level within the NPPF, where it states that:  <i>“The supply of large numbers of new homes can often be best achieved through planning for larger scale development, such as new settlements or significant extensions to existing villages and towns, provided they are well located and designed, and supported by the necessary infrastructure and facilities”</i>          (Para. 72, the NPPF, February 2019).</p> <p>5.10. Crown Golf would endorse an acknowledgement within the Council’s new Vision of the need for the Council to plan for larger scale development. Crown Golf look forward to working with WCC and key stakeholders to demonstrate how SWGC can make a significant contribution to achieving the Council’s Vision.</p>
E1121	Document attached to email –

In summary the vision and spatial strategy that should be promulgated by the Local Plan should be based on the following approach:

1. Winchester Town is the most appropriate location for strategic growth within the district and is best-placed to accommodate the residual component of the plan-period local housing need figure within a single growth area to the north of the existing urban edge. The opportunity exists to extend growth to the north of the existing Kings Barton MDA up to the line of the A34, extending westwards to take in the site of the soon to be de-commissioned Sir John Moore Barracks. The land within this zone is being actively promoted by Vistry and Taylor Wimpey, and, separately, by the DIO. Part of the land is brownfield and is public sector owned, but on its own cannot offer the strategic scale or cohesion necessary to create the conditions for a comprehensive new neighbourhood to the north of Winchester. Taken together, the land controlled by Vistry and Taylor Wimpey, the DIO, and the already committed Kings Barton MDA, which is under construction, there is an opportunity for the Council to create a sustainable new city neighbourhood to the north of the city centre, extending existing committed development in a way that will bring significant added benefits in the form of connectivity and infrastructure. The critical mass that development on this scale would offer in combination would support delivery of employment land, a new secondary/through school, strategic scale park and ride, a comprehensive multi-functional and interconnected green infrastructure resource, new local centres inter-connected by sustainable travel networks, the functions of which could be complimentary, and the potential for the development of a neighbourhood wide renewable energy strategy. The delivery of such growth could be subject to comprehensive masterplanning extending across the whole of the growth area and would present the opportunity to provide for all of the strategic growth that will be needed in the defined plan period to 2038 and beyond. Due to the unique spatial characteristics of the City and the district, North Winchester is the only location in the district that offers the opportunity to build a planned, cohesive, city neighbourhood that truly embraces the Climate Emergency agenda objectives. The advantages are significant, addressing the Council's core themes and enabling the council to exert substantial levels of control over outcomes, while creating the necessary conditions to respond to the other challenges that would not otherwise be addressed by adopting a constrained growth or dispersal strategy. Concentrating development at North Winchester would relieve pressure elsewhere within the District and would enable Council/developer partnerships at all levels. Through the concentration of ownership/control and the opportunity to extend an existing strategic commitment this strategy addresses the Council's sustainable development obligations in a holistic manner and would allow true partnership working to take place across the public and private sectors, based on known and trusted delivery agents.

2. The southern fringes of the district that lie within the Partnership for South Hampshire (PfSH) area occupy locations which have spatial and functional relationships with the Southampton/Portsmouth conurbations lying to the south. There

are significant development commitments in the form of MDAs within this area that are on-stream, and which will deliver significant numbers of new homes within the new Plan period. The existing commitments will continue to play a significant role in responding to the challenges arising within the conurbation concerned with meeting housing needs and accommodating economic growth ambitions of the PfSH. Development within the southern area represents, in planning terms, a legacy from an earlier regional planning-based era with its origins in RPG9 and the South East Plan. There are no compelling reasons to continue to define a spatial strategy for the district based on principles that were established some 20 years ago. Indeed, it would now be inappropriate to address locally driven housing need requirements generated by the standard methodology via a strategy that is based on expanding sub-regional population centres that lie beyond

8

the district boundary. Acknowledging this fact, the southern (PfSH) margins of the district should be reserved as growth locations to be allocated in response to development needs arising as a consequence of the duty to cooperate to accommodate unmet housing needs arising from the PfSH Housing Market Area. The strategy recognises that accommodating the unmet needs of adjoining authorities is a legitimate and proper function of spatial planning and represents an appropriate factor to justify increasing a local housing need figure. Accordingly, the south Hampshire area should be reserved for this purpose in spatial planning terms.

3. The remainder of the district, currently characterised as the Market Towns and Rural Areas (MRTA), is predominantly rural with large areas being constrained environmentally. The MRTA does not, offer a sustainable platform upon which to deliver spatial cohesion or functionality and the council should not allocate strategic-scale growth to settlements which have a proven ability to manage modest and locally defined growth levels for themselves. The MRTA does have a role in delivering small scale growth that supports the locally identified needs of the secondary settlements and rural hinterlands, but any strategy that allocates the district's strategic growth to these settlements would not be compatible with the Council's Climate Emergency objectives, would not achieve the step change that is required to achieve a modal shift in transport-demand/use, and would not change lifestyle habits. Development within the MRTA should be driven by local choice, responding to specific local needs rather than being imposed through an obligation to contribute towards meeting the strategic growth component of the Local Plan. The larger settlements could reasonably bring forward development at a scale and in locations supported locally. Such levels of growth could be determined locally in direct response to the needs of the local community, determined through community engagement, including the use of neighbourhood planning powers, but not relied upon to meet the District's core housing requirement. Non-strategic

	<p>allocations and development management policies could also facilitate development in accordance with sustainable development principles that are strictly defined and controlled.</p> <p>4. The new Local Plan will be the Council's first strategic plan without responsibility for the part of the District that lies within the SDNP. From 1 April 2011, the South Downs National Park Authority (SDNPA) became responsible for all planning in the South Downs National Park and the South Downs Local Plan 2014-2033 was adopted in 2019. While the Winchester Local Plan area has therefore decreased by 40%, the District will continue to have a role in meeting the housing needs of the SDNP in the plan period to 2038. In accordance with national planning policy, great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, which have the highest status of protection in relation to these issues. Evidence given during the Eastleigh Local Plan examination highlighted the sensitivity of roads and settlements within the National Park to development which is adjacent to it, and dispersal around the MTRA area of 'strategic' levels of housing in the vicinity of the National Park would exacerbate this. Development concentrated in a way which reduces avoidable impacts on the National Park should therefore be preferred and this is achievable north of Winchester.</p>
E1122	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

<p>E1149</p>	<p>Document attached to email –  <b>Vision of Winchester</b>  <b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b>          3.2 Drew Smith agree with the current vision of the Core Strategy. In particular, the current vision seeks to retain distinctive characteristics of the three key areas (Winchester, Waterlooville and Whiteley and market towns and villages). With regard to Winchester Town the vision states:  <i>“The County Town of Winchester needs to meet its housing and community requirements and to diversify its economy through the promotion of the knowledge, tourism, creative and education sectors, whilst respecting the highly valued features and setting of the Town.”</i></p>

	<p>3.3 It is agreed that Winchester Town should meet the housing requirement generated from the Town and make the principal contribution to meeting the housing needs of the District as a whole and we consider this aim should be reflected in the new Local Plan. This is further discussed in relation to Issue 4.</p> <p><b>Q: Are there any elements of the Winchester Town Forum’s Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?</b></p> <p>3.4 Drew Smith welcome the six critical values of the Winchester Town Forum’s vision as set out in Handbook 3 and these should inform the vision for the new Local Plan. In particular, Drew Smith support the role of building resilient communities to help tackle the climate crisis, the importance of creating an effective dialogue with communities with strong leadership, built on trust between the Council, developers and local people.</p> <p>3.5 Drew Smith will invest in community dialogue and in building its reputation, engendering trust and pride in its developments.</p> <p>3.6 The 15-minute city model is a particularly valuable principle that can be extended to the Local Plan vision and we have documented our support for and compliance with this model elsewhere in these representations.</p>
<p>E1150</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. Where the homes go is essential to meet the needs of the whole district.</p> <p>I urge you to take account of my views, and look at alternative ways to provide new sustainable housing an a new Green Belt south of Winchester in our new Local Plan.</p>
E1162	<p>Document attached to email –  <b><u>4. VISION AND OBJECTIVES</u></b></p> <ol style="list-style-type: none"> <li>1. The Consultation Document seeks views on whether the Vision set out in the current adopted Local Plan Part 1: Core Strategy (LPP1) is still appropriate for inclusion in the new Local Plan, or whether any elements of the Vision need to change.</li> <li>2. The LPP1 Vision broadly reflects the spatial development strategy set out in that Plan with growth focussed at Winchester, Waterlooville and Whiteley and in the Southern parts of the District. Whilst it is accepted that the Waterlooville and Whiteley sites are not complete, their role in the delivering the Vision of the new Plan will diminish as the plan period progresses. The current adopted Vision also directs a lesser (but still significant) proportion of planned growth to the Market Towns in the District. As set out in more detail in our comments below, the larger sustainable settlements across the District and those settlements that can be made to be more sustainable through strategic growth should both play a role in meeting the housing needs of the District. In light of the above, until such time as the growth option(s) (i.e. Spatial Strategy) has been agreed and areas for change identified, it is not appropriate to set out a spatial vision for the Plan.</li> <li>3. The Plan also sets out a number of broad objectives that will be met through the implementation of the new Local Plan. Persimmon has no comment to make on the objectives at this stage.</li> </ol>
C579	<p>I am deeply concerned by the proposal to develop south Winchester and in particular the Royaldown proposal which I feel will destroy the feel of the local area, beautiful countryside and greatly increase traffic into an infrastructure that cannot support it.</p> <p>I recently moved to the area and feel that the countryside on the south side of Winchester desperately needs to be</p>

	<p>protected for the local community to enjoy as it currently does. I support the alternative proposal to promote brownfield development first along with a protective Green Belt – without this you destroy the local environment and the attraction that it holds for many living here.</p> <p>Please add my name to the list of people supporting a 5th option”</p> <p>Additional email I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1165	<p>Having read the recently published details about the new Local Plan, I would like to express my opposition to Option 3 - the plan to build a large new settlement on greenfields surrounding Micheldever.</p> <p>I am aware that the Council's main priority is its environmental commitment to sustainable development and climate neutrality, and this plan to build a large-scale new town would have devastating effects on the environment and go against the Council's priority.</p> <p>As a lifelong Winchester resident, I understand the need for new homes in the area. However, Option 3 of the new Local Plan would have the worst environmental impact. Building on untouched countryside would immediately destroy habitats and already dwindling biodiversity, whilst producing air, noise and light pollution and releasing stored carbon. Greenfields also offer a vast plethora of benefits. They provide leisure activities, food, water, flood control and are vital in the fight against climate change, capturing and storing carbon. Studies have also shown that green spaces improve people's mental health, another priority to the Council.</p> <p>Building on brownfield sites, reinvigorating them, would be much more economically logical and far less negatively</p>

	<p>impactful on the environment. Brownfields usually already have access to pre-existing infrastructure, whereas new settlements built on greenfield sites require new infrastructure that is expensive and environmentally-damaging to build.</p> <p>In a world that is slowly dying due to exponentially increasing climate change, it is vital that we protect our environment, and Option 3 would be devastating to this and go against the Council's priority of protecting the local environment. Building on brownfields would be much more economically and environmentally feasible</p>
E1166	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. 	<p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1176	<p>I am writing to express my concern and oppose the potential, large speculative development such as Royaldown in the Winchester area.</p> <p>Badger Farm and Oliver's Battery are relatively small and unspoilt settlements, that enjoy grey spaces and the nature reserve that are vital for the local community, mental health and wildlife conservation. Royaldown is a huge development that would hugely increase the carbon footprint and would have a devastating ecological impact on the whole region. I believe this is in disagreement with the current political climate (especially in the face of the "climate emergency" as openly supported by the UK government.)</p> <p>I believe that the vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, and I would like to protect the Hampshire Green Belt. So, I strongly oppose any potential development on the scale of Royaldown in this area.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1178	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. C597	<p><b>The Vision</b>  <b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b></p> <p>The existing vision for the Local Plan provides a useful starting point for the vision looking ahead to 2038, however some updates and amendments are likely required. The consultation documents notes that the new local plan needs to be prepared through the climate change lens and the need for zero carbon sustainable development going forwards. This should also be reflected in the vision for the local plan. With this in mind it may be more useful and more appropriate for the vision to be expressed in line with each of the three core principles of sustainable development as outlined in the NPPF, being economic, social and environmental objectives. Of the six critical values identified through the Winchester 2030 document it is considered that the fifth is most relevant to the Local Plan, whereby the move towards the ‘fifteen minute city’ model could be set out and formalised as an objective from which the strategy and planning policies can be formed around.</p>

E1209	<p>Vision for the District in 2038  11. The vision set out in the Core Strategy was drafted some years ago and appears dated for a number of reasons. It has as its focus housing, tourism and employment. 'live, visit, work and do business'. The challenges facing the District</p>

	<p>are significantly different today and WCC's commitment to climate change suggests that a better approach would be to prepare a new vision rather than seek to make changes to the current one.</p> <p>12. The new vision should have at its centre the delivery of sustainable development which would be consistent with the NPPF and with the UN sustainable development goals. The Vision should be informed by input from all the communities within the District rather than just from the Winchester Town Forum to avoid it being 'Winchester Centric'. The views from representatives eg parish councils, representing the majority of the of residents should be considered in the development of the new local plan. Winchester City has one third of the District's population and is a vitally important centre particularly for the northern part of it and should be promoted as such.</p> <p><b>Q1and Q2. The current Vision is not still appropriate. In 2021, we face significantly different challenges such as the effects of the pandemic on the way we live and work and leaving the EU. The new local plan should have one vision for the whole District and have at its heart delivering sustainable development</b></p>
E1218	<p><b>VISION FOR THE LOCAL PLAN</b></p> <p><b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b></p> <p>Winchester City Council has the fundamental aim of achieving zero carbon emissions for the District by 2030 so this should be part of the vision. However, if this aim is to be achieved, it will need a major change in both planning policies and other aspects of life beyond the scope of the planning system to deliver, particularly in the way we travel. The role of the planning system in reducing carbon emissions is to require all development to be sustainable as defined in the NPPF. So, while the District's vision should refer to the aim of achieving carbon neutrality, it should require the delivery of sustainable development as a contribution to the goal of achieving carbon neutrality.</p> <p><b>Comments on Development Strategy/Spatial Planning Vision for Winchester</b></p> <p>LPP1 contains a separate spatial planning vision/development strategy for Winchester city (pages 35 and 36), as there is for South Hampshire Urban Areas and Market Towns and Rural Areas. A separate vision for Winchester city should be retained and should include:</p> <ul style="list-style-type: none"> <li>• The promotion of Winchester's unique place in English history and the potential for using its heritage and cultural opportunities in developing its economy.</li> <li>• Transport and movement are a critical issue in the next ten years, so the aim of the Winchester Movement Strategy of substantially reducing road traffic in the centre of Winchester should form part of the vision.</li> </ul>

	<p>The recently adopted Vision for Winchester has some interesting and laudable proposals, some of which are probably too detailed to be incorporated into Winchester’s Vision for the Local Plan. 2</p> <p>The spatial planning vision/development strategy for Winchester has not been able to prevent major developments being considered in isolation. Often there has been insufficient analysis of the cause and effect that actions will have on the way other parts of the city will be affected. The limitations of the Spatial Strategy arise because it consists of pages of text and is not portrayed spatially. Strategic thinking and decision making for the city and its suburbs would be much better understood and more effective if the City Council produced a two or three-dimensional spatial strategy (sometimes called a citywide urban development framework). It would need to be flexible so that it could be adjusted as major sites are developed, new sites are identified, priorities change and new initiatives are developed.</p> <p>Citywide strategic frameworks have been adopted by a number of local authorities, both as neighbourhood plans and as supplementary planning documents. The Trust believes that an adopted citywide framework would receive the support of the community and lead to more joined up decision making which is more collegiate and considered. The preparation of such a strategic framework should become a requirement of the new Local Plan.</p>
E1219	<p><b>VISION FOR THE LOCAL PLAN</b></p> <p>1: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</p> <p>The Local Plan is still valid and relevant</p> <p>2: Are there any elements of the Winchester Town Forum’s Winchester 2030 Vision that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SDNP?)</p> <p>Not competent to answer</p>
E1221	<p><b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan?</b></p> <p><b><i>Our response</i></b> – No</p> <p><b>What if anything needs to be changed?</b></p> <p><b><i>Our response</i></b> - it needs to be rewritten</p> <p>The new vision requires flexibility to reflect a changing world of how people’s habits have changed as a result of a global pandemic, shopping habits, working from home and the work/life balance.</p>

	<p>It needs to recognise the impact that changes will make to the High Street and finding ways of attracting visitors and employment to the whole District.</p> <p>It needs to focus on sustainable new development for the whole District which should be at the heart of the Local Plan. The other elements, Climate Change, Protection of the Countryside, Biodiversity, Natural environment etc. should all be in relation to this.</p> <p>It is important to retain local distinctiveness and have a consistent Vision for the whole District.</p> <p><b>Is there elements of the Winchester Town Forum’s 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the District outside of the SNDP)?</b></p> <p><b><i>Our response</i></b></p> <p>The Town Forum Document relates to 1/3<sup>rd</sup> of the District and therefore should not be the only reference. The views of 2/3<sup>rd</sup> of the District would not be covered by this document and therefore views of these residents should be sought via the Parish Councils who do not live in Winchester Town. This would balance the Town Forum 2030 views.</p>
E1224	<p>We are constructive in our response to the Strategic Review where possible but are concerned that many of the issues and ways in which they are presented can be difficult to understand and even for planning experts to turn into sound policies for future land use, which is the purpose of a Local Plan. Land is a valuable and limited resource, and its effective use is essential for achieving sustainable development. This response from the Society is, therefore, intended to be more intelligible to non-experts and thereby more meaningful.</p> <p><b>What is the consultation about?</b> - Winchester’s strategy aims to set long term planning aims for the District (including more homes but not specific sites at this stage). We went through a similar exercise in 2017-18 and most of the points we raised then apply equally well now.</p> <p>It is important to note Winchester City Council’s ‘over-arching’ goal for the District: ‘carbon neutrality by 2030’. In the plan, though, ‘carbon neutrality’, ‘zero carbon’ and ‘net zero carbon’ are all used, as if interchangeable. Experts argue about these definitions but we ask WCC to say more clearly what <i>it</i> means and especially, <i>how measured and action to be taken</i>.<sup>1</sup></p> <p>1 Effective measurement and monitoring, although often difficult, will be essential: ‘If you can’t measure something, you can’t improve it.’ Attributed to Peter Drucker, influential management consultant.</p> <p>2 The Society is aware of the communication from Client Earth (an environmental law charity), reminding Local Planning Authorities of obligations to address climate change but also nature loss and pollution. But details are needed of how</p>

	<p>However defined, though, (and whether achievable by 2030 or not), this issue is built into all of the information provided and questions asked by WCC in the consultation, some of which appear leading or limited in scope<sup>2</sup>. <sup>2</sup></p> <p><b><i>We suggest, though, that the over-arching objective (this is a Local Plan, after all) is to produce an effective, holistic approach to environmental, social and economic issues, as set out in the National Planning Policy Framework 2019 (NPPF), if it is to deliver sustainable development. If careful choices are made, such a plan will rightly lead to important reductions in carbon emissions whilst strongly supporting the other key components of sustainable development: a strong and competitive economy, meeting housing needs, supporting health (mental and physical), social and cultural well-being, and protecting and enhancing the natural environment. These issues are inextricably linked and must be balanced.</i></b></p>
E1230	<p><b>Question 1. Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan?</b></p> <p><b>No</b></p> <p><b><i>What, if anything needs to be changed?</i></b></p> <p>The vision was drafted some years ago and the challenges facing the District are significantly different today, for example the impact of COVID on how we shop, work and enjoy the countryside and how we need to address climate change.</p> <p>The local plan needs to deliver in accordance with the new vision and sustainable development consistent with the NPPF. The purpose of the planning system is to contribute to the achievement of sustainable development and a new vision is needed to guide the new local plan, reflecting the new challenges which WCC faces as the local planning authority.</p> <p><b>Question 2. Are there any elements of the Winchester Town Forum’s Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?</b></p> <p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
E1232	<p><b>VISION FOR THE LOCAL PLAN</b></p> <p>1: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</p>

	<p>The current Local Plan needs updating and reframing. Needs more focus on the environment, impact of coronavirus, decline of the high street and genuinely sustainable development that meets the needs of the whole community living and working in the centre of Winchester town and surrounding countryside, i.e. the whole district, not just those living in the centre. A shared vision will ensure the Winchester District retains its local character and special features. Climate Change, Biodiversity, Protection of the countryside and Living Well should be an important part of this. Delivery of sustainable development should demonstrate NPPF and UN (National Planning Policy Framework and United Nations) sustainable development goals.</p> <p>2: Are there any elements of the Winchester Town Forum’s Winchester 2030 Vision that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SDNP?) Whilst the Town Forum’s Vision is of value, it is important to remember that it largely represents the views of Winchester City town residents – approx. 40,000 residents, so the Town Forum 2030 document should not be the only reference for ‘Vision’. Winchester Winchester is a vitally important “hub” or centre of the District and must also be easily accessible to “out of town” as well as “town” residents. Views from representatives (e.g. Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be invited to balance the Town Forum 2030 views.</p>
E1233	<p><b>VISION FOR THE LOCAL PLAN</b></p> <p>1: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed? <i>Durley Parish Council agrees that the current Local Plan is still relevant however, climate change needs to be included more and reflect the need for a carbon sustainable development for the future Plan as Winchester City Council is trying to be carbon neutral by 2030. To achieve this aim it makes more sense to place development in areas where it is sustainable and transport links are available rather than in more rural villages where cars are needed to get to work, shopping etc.</i></p> <p>2: Are there any element of the Winchester Town Forum’s Winchester 2030 Vision that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SDNP?) <i>Durley Parish Council believes that although this is important it does not reflect the remainder of the District, especially those parishes in more rural areas. It does, however, reflect a major part of the District which is more sustainable.</i></p>
E1237	<p><b>VISION FOR THE LOCAL PLAN</b></p>

	<p>1: Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?                  The vision for mitigating climate change by reducing carbon emissions should be applied to all development permissions and strategies. Carbon Neutrality by 2030 is supported</p>
E1240	<p><b>Vision for the Local Plan</b>                  We support the Key areas of Focus on page six. The pandemic has had a big impact on everyone, and it has changed how communities and planners view the role of planning. We think that there needs to be some amendments made in regards to development in the National Park; “Development in those settlements that lie in the South Downs National Park should respect its purposes.” This was written with the Core Strategy in mind, where the vision was shared across the entirety of the District, including the National Park. We would welcome mention of the setting of the National Park and its special qualities.</p>
E1242	<p><b><u>1.VISION FOR THE LOCAL PLAN</u></b>  <b>Is the vision in the current Local Plan still appropriate for inclusion in the new Local Plan and what, if anything needs to be changed?</b>                  Vision remains appropriate but, as noted in the consultation document, needs to reflect the need to address climate change and the need to reduce carbon emissions. All future development should focus on being carbon neutral.</p> <p><b>Are there any elements of the Winchester Town Forum’s Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the District outside of the SDNP)?</b>                  The rural areas in the district need to be able to connect with the ‘fifteen minute’ models through improved, carbon efficient access such as cycle routes and zero carbon public transport.</p>
C580	<p><b>Is the vision in the local plan still appropriate for inclusion in the new Local plan</b>                  The vision from the last plan understandably does not respond to the climate emergency. It does not mention the overarching objective of the local plan which is to be a prime driver in the achieving of a carbon neutral Winchester by 2030.                  We applaud and support this objective but it is an ambitious task and will require a thorough-going overhaul of the City Council’s thinking about planning. There can be no more significant decision for the district, in terms of achieving carbon neutrality, than where new development is located.                  The original vision implies ‘business as normal’ in terms of growth in areas which are less sustainable and this is unlikely to be compatible with the carbon neutral goal.</p>

	<p>Also Covid 19 has accelerated trends that were already occurring in terms of homeworking shopping etc and these may well need to be addressed. These potential drawbacks to the current vision are covered in your page 9 but not acknowledged in the online consultation form.</p> <p>One of the great assets of the City Council District, which the vision should recognise, is that the exceptional quality of the Historic City is balanced by the exceptional countryside and smaller communities both in and outside the National Park, where the majority of residents live. The Vision needs to explore how to build on this special duality of complementary but contrasting attributes.</p> <p>It is good to see that Winchester Town Forum have progressed the Vision for Winchester 2030 but, whilst it undoubtedly deserves a place in this consultation document as an appendix, we do not believe that it should in itself be driving the overall Vision as is implied by its position at the front of the consultation. There needs to be a balancing vision for the rural 60% of the district. The 6 critical values, whilst laudable in themselves, are generic to the plan-making process and not specific to either Winchester Town or the rest of the City Council area.</p>
E1244	<p><b>Vision</b></p> <p>The consultation asks whether the Vision as set out in the 2013 Joint Core Strategy is still relevant. CPRE Hampshire's (CPREH) response is <b>No</b> for the reasons set out below.</p> <p>The vision was drafted some years ago. It had as its focus housing, tourism and employment. 'live, visit, work and do business'. The document states that "the key change and challenge for the new Local Plan is that it needs to be prepared through the climate change lens and reflect the need to zero carbon sustainable development going forward." CPREH applauds WCC's aspiration to prepare the plan through the "lens" of climate change, and shares this aspiration, but this will necessitate changes in the existing vision, and substantial changes to the historical spatial pattern of development, particularly if the ambitious target of carbon neutrality by 2030 is to be met.</p> <p>The challenges facing the District are significantly different today. Winchester City Centre is experiencing major changes to retail shopping patterns which will be exacerbated by the impact of Covid. It will also be affected by increased permitted development rights and WCC's commitment to climate change. The current vision does not mention that Winchester is the most sustainable location in the district. Since the impact of Class E (Commercial) to Class C3 (Residential) changes has not yet been evaluated, nor has the move towards different shopping habits, these changes would need to be accommodated in a new vision.</p> <p>In addition, the previous vision's second point refers to "creating extended communities in South Hampshire", an objective which must now be revisited as these are car-dependant locations and would surely not meet the "lens" test. The vision will need to articulate how any growth in the market towns must look at options for mixing work and living in order to minimise additional car journeys to the major centres such as Winchester.</p>

	<p>CPREH considers that a fresh vision is needed to guide the new local plan and reflecting the new challenges which the Council faces as the local planning authority. The purpose of the planning system is to deliver sustainable development and land use planning which embraces environmental, social and economic issues, as set out in the NPPF. In that context the vision should have as its starting point the delivery of sustainable development which would be consistent with the NPPF.</p> <p>The delivery of sustainable development should apply across the whole of the District and in that context there is probably no need to identify 3 specific geographic areas as the current vision does.</p>
E1246	<p><b>Local Plan Objectives</b></p> <ul style="list-style-type: none"> <li>• Overarching objective: Carbon Neutrality</li> </ul> <p>The Earth’s climate is changing faster than it would otherwise due to increased burning of fossil fuels for electricity, heating and powering transport as well as large-scale land use change associated with agriculture. In the UK, the effects of climate change will include shifts in our seasons, hotter drier summers, warmer wetter winters, rising sea levels, more extreme weather events such as droughts, flash floods and strong winds, and changes to distribution of species and habitats.</p> <p>An increasing number of local authorities across England are formerly declaring climate change emergencies, including Winchester City Council. The UK became the first country in the world to declare a climate emergency and the government have recently set in law a climate change target to cut emissions by 78% by 2035 compared to 1990 levels, which will bring the UK more than three-quarters of the way to net zero by 2050. National planning policy outlines the need for Plans to take ‘a proactive approach to mitigating and adapting to climate change’, that policies should ‘support appropriate measures to ensure the future resilience of communities and infrastructure to climate change impacts’. The Government’s 25 Year Environment Plan sets out a goal for mitigating and adapting to climate change.</p> <p>Therefore Natural England welcomes the overarching objective of the Plan for carbon neutrality. It is advised the Plan recognises and incorporates the role of the natural environment to help deliver climate mitigation and adaptation across the district. Please see further more detailed advice on this aspect below.</p> <ul style="list-style-type: none"> <li>• Environmental, economic and social objectives</li> </ul> <p>Overall Natural England supports the objectives set out for the Local Plan that reflect the need for carbon neutrality, improving air and water quality, the requirement for biodiversity net gain, and the need for healthy communities with good access to green and blue infrastructure. Please see specific comments on the objectives below.</p>

	<p>The Plan should include an environmental objective to protect and restore local, national and international sites designated for nature conservation.</p> <p>It is advised that the fourth environmental objective (regarding net gain and habitat loss) is amended to seek protection, enhancement and expansion of the ecological network across the district, rather than just seeking a halt to habitat loss. Please see further advice below on the multiple cross-policy benefits such an approach can achieve for the benefit of both residents/visitors to the district.</p> <p>It is also advised that the Plan’s objectives also include protection and enhancement of landscapes, including the need to ensure development within the setting of the South Downs National Park does not compromise relevant National Park aims and objectives.</p>
<p>E1253</p>	<p>As input from Winchester Town Forum (WTF) into the Strategic Issues &amp; Priorities Consultation, WTF Planning Group met with WCC Officers to begin to describe what we want Winchester to look like in 2038.</p> <p>While this is comparable to the process with Parish Councils, Winchester Town is far larger and more complex than a rural town or village and the WTF has little formal resident engagement infrastructure, and unlike parishes has no dedicated officer support.</p> <p>To address this Officers have offered City Cllrs external training on resident engagement and the technical requirements of a local plan. As the WTF Local Planning group we have declined this offer arguing that Winchester is too important and too critical to the District Local Plan to be exposed to the risks that this approach would offer. City Cllrs are too occupied with supporting their ward residents and covering gaps otherwise met by Parish Councils – to take on this added responsibility (and this is without mentioning their other responsibilities on Cabinet, as HCC Cllrs and/or in other employment).</p> <p>Our position is understood by Officers, however the response is that WCC does not have sufficient resources to support a Winchester Town input into the Local Plan and so investment in us is critical.</p> <p>We suggest that situation reflects prior practice and a lack of investment in the local plan as regards Winchester Town. This is evidenced by absent spatial plans and insufficient policies that have resulted in:</p> <ul style="list-style-type: none"> <li>- A non-strategic approach to Winchester</li> </ul>

As an example, Winchester is a University town but has little strategy in regards student housing – or providing housing to students following graduation. Sites such as the old Police Headquarters and the junction of Andover and Romsey road should have been identified for student housing, indeed the developer of the Police Headquarters land agreed – but has stated that the WCC planning process was too complicated to navigate to achieve this. This pushes students to lower cost housing and HMOs around Winchester – which in turn removes such affordable and family homes from the housing supply – driving graduates and lower paid service workers out of Winchester.

Further, little attention has been paid to infrastructure and highway access into the town. The three key access routes (Andover Road, Easton Lane, A272/B330) are all currently compromised and each are about to be subject to intense pressure with the;

- Planned closure of the Andover Road
- Development of the M3
- Opening of the new Sports and Leisure Centre

Most importantly it has provided no discussion or guidance for the major projects, something has over many years been left to officers, with the support of the previous administration, leaving the town with many outstanding problems. There is no strategic overview of how the town as a whole should develop, build on its strengths and address its problems; this applies to new development such as the Sports Centre, existing Leisure Centre and River Park as well as green open spaces, movement and the public realm.

- Developer driven housing

The issue of sites in Winchester town not being identified within a spatial plan, with policies to support, shows up along Chilbolton Avenue where individual plots have been developed in isolation with no interconnectivity, and along Stockbridge Road and the Meadowlands site. Here a large area that should have been identified as a perfectly sustainable site for high density housing and affordable housing, near shops and a GP surgery has instead been divided into four separate developments for premium housing. Arguably this has been orchestrated by the developer, and such activity is to be expected – but the local plan did not provide the means to drive a better answer.

The Local Plan process at least in Winchester has typically focused on providing parameters for developers to deliver the housing numbers; it is not projective, and the absence of a spatial plan has led to a failure to identify opportunities

	<p>and has ignored sites, and land, that are in social ownership, mainly WCC, when considering response to the requirement for new homes.</p> <p>Spatial planning needs to be carried out in tandem with the Movement Strategy; at the present time when there is a move to reduce traffic in the town centre there needs to be a plan for the use of the surface car parks. We are providing nearly 600 new car parking spaces at Bar End but have no plan either for the central area car parks that should become redundant or for the Bar End area to ensure it develops into a decent neighbourhood.</p> <p>The surface car parks were never designed to be car parks; they are left over spaces after the demolition of buildings, mainly the low-cost homes, the town so desperately needs. They degrade the town's environment and are best described as being like 'pulled teeth'.</p> <ul style="list-style-type: none"><li>· Insufficient policies</li></ul> <p>Local Policies e.g. CP2 are insufficiently defined and/or enforceable in order to provide housing of the size and design that both meets local housing needs and development consistent with the local character. Developers are able to manipulate the planning system to build executive homes (ref Downside/Shorewood - which was subject to a number of repeat applications and subsequent reviews by the Planning Committee, and an appeal - before the final development being sold to a professional footballer) rather than what is needed for nurses, teachers, shop workers, local authority officers and other workers needed throughout the town.</p> <p>To address this issue, we propose broadening the offer we were given by WCC for training, by Richard Eastham, who incidentally also worked on the Vision for Winchester. And instead extend the WTF Vision for Winchester work and have Richard take it to its natural next step, with a project scope that covers the Winchester input into the local plan.</p> <p>This would be an important and critical component of the Winchester District Local plan and include engagement with residents to educate, and co-create the development of;</p> <ul style="list-style-type: none"><li>· Developing the Vision for Winchester into a vision for the physical development of the town</li><li>· A Design Framework - which identifies sites to be brought forward and regeneration areas such as the employment parts of Bar End and Winnall, with proposals for how they would be developed</li></ul>
--	--

	<p>· Policy Statements and Design Codes, with indicative design concepts</p> <p>This extension of the investment made in the Vision for Winchester was implicit in the original Vision brief, in that it would feed into and support the Local Plan. Continuing with the Richard as the lead consultant will maximise spend already made and ensure soonest delivery of output – and consistency with the resident engagement already done.</p> <p>Building on the Vision work, the scope can be expected to take 2 years to complete – which would fit within the 2023 timeline for the Local Plan. Project budget, including resident engagement costs is estimated at £90k over the 2 years.</p> <p>Winchester Town represents over 40% of the District, it is also the commercial and services centre for the District and is the most sustainable location for development. Consequently, we argue that funding for this work should come from the WCC Local Plan budget. However, given the dependency on this work for future infrastructure spending we also propose that funding be sought from WTF and WCC CIL budgets.</p>

**2: Are there any elements of the Winchester Town Forum’s Winchester 2030 document that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?**

**Are there any elements of the Winchester Town Forum’s Winchester 2030 Vision that could be used to help inform a vision for the Local Plan (which covers the whole of the district outside of the SNDP)?**

<b>Respondent number</b>	<b>Respondent comment</b>
C2	n/a
C5	Once again WCC shows that it is City centric except when it comes to housing development. The Town Forum is irrelevant to the rest of the district. Winchester the city has transport links, buses, entertainment facilities, workplaces etc. which the majority of local villages only dream of.
C8	Same as above.

	(Forget climate change. There is no climate emergency. It is ideological propaganda. A small rise in temperature over the next eighty years is not an emergency. There are decades to adjust human response without crippling our way of life and impoverishing developing countries.)
C12	Anything that relates to sustainable public transport - not just creating sections of existing highways and byways.
C15	Yes. <b>Involve people, encourage residents to take control over where they live and make the area feel like "theirs"</b> as opposed to part of a city where "they" make decisions. For example the "community orchard" example from Scotland. A second example is "pop up parks" from Leeds. School street closures, close streets to traffic for children to play in are other examples. The pandemic lockdown exercise sessions resulted in lots of people walking in their local area, getting to know it and seeking conversation with people they saw. All these interactions were appreciated and important to people. The suggestions above, and many more, from One Great Win would enhance residents appreciation of their local communities, which is so important for health and wellbeing .
C19	N/a
C21	Probably
C23	The work can help to inform the Local Plan Vision, but with its core focus on Winchester City, <b>it needs to be taken in context of the wider District.</b>
C27	The trust between people and politicians has been eroded throughout the 21st century (and probably before) so the need to re-establish trust is essential. That means the public must be confident in elected representatives and executive officers which can only be achieved through improved transparency and accountability. <b>in making decisions that affect the public account must be taken of local views and priorities.</b> I am concerned that recent experience suggests that these aspirations are failing.
C32	Our entire view of home working and online shopping has changed since COVID-19 and the entire requirement needs to be reviewed again.
C36	There is no 2030 document
C38	Yes
C40	Don't know
C42	I like the idea of <b>resident local communities who identify issues important in their communities and then work together with WCC to overcome them.</b> I also like the concept of the <b>15minute town</b> and think that there should be <b>far more emphasis on public</b>

	<b>transport</b> , cycle & footpaths to facilitate this. Roads in the area are becoming grid locked and the pandemic has increased the desire to use cars less.
C47	Yes - the need for extensive further work on mapping and preparing a Plan for Winchester Town The concept of '15 minute city' applies primarily to Winchester town and needs to be defined further as does '100 small wins better than one big win.' <b>Greater meaningful engagement with local expertise and committed people</b>
C53	Taking account of falling birth rate
C54	I concur with all but the first of the Six Critical Values (the first may become an excuse for avoiding difficult but more impactful decisions). Values 2 to 5 would be valuable additions to the Vision.
C57	Part of the <b>City Ecology is the farmers market which has shrunk in size and prominence over the past decade</b> . Compare and contrast with other European cities such as Barcelona, Lisbon and Florence, whose citizens are connected to their local countryside and food-producers by a permanent, vibrant market space offering local produce and food and beverage stalls undercover at which to enjoy it. Bringing the countryside and its local producers permanently into the heart of our city and villages could usefully be considered as an important 21 Century strategic objective. As an example, the Debenhams store could be considered for conversion to an open-plan food market downstairs with eateries above.
C58	Yes, new housing developments should include <b>opportunities for people of all ages to self-build their own homes</b> . This would create a new cohort of residents with great attachments to their neighbourhood as well as producing affordable homes with the finest eco-credentials.
C60	I really is a consultants joy ride. 63 facebook likes says it all
C61	Not sure
C75	All of it. Though much of its is pie in the sky thinking.
C76	The Top-level philosophy of the document is useful and broadens the scope and should be added to the vision - <b>Taking a spatial approach, engaging all, and sharing information with openness and transparency that allows everybody to engage and understand</b> . However, <b>the definition of a walking city, linked to 15 minutes walking or cycling should NOT BE adopted into the vision</b> . The level of localisation and regionalisation that this would drive into the community is too extreme for social and economic sustainability. It might benefit the environment but sustainability has three elements!

C79	Winchester City is only 1/3rd of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important “hub” or centre, in particular for the northern part of the District, and it should be promoted as such. However, it <b>must also be easily accessible to “out of town” as well as “town” residents.</b> Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.
C81	Not sure
C87	Need more involvement of local organisations such as Paris Councils.
C88	Majority of people outside Winchester City need to be consulted perhaps through their Parish Council.
C93	I have not answered as I live in the SDNP
C100	I don't know
C103	Their comments should be taken into account.
C111	The whole District's views need to be garnered, not just those of the City.
C114	The main challenge should be to <b>develop brown field sites for housing</b> , not using existing farmland and green spaces. For instance, the old Army camp in Badger Farm Road has been derelict for many years and would have all the services required for housing and for some reason, does not figure in any development plans. <b>The COVID 19 pandemic has resulted in a major shift in the needs for office space. Develop such areas for housing.</b>
<b>C116</b>	The comment has been removed as the respondent requested their response not to be published
C119	Winchester City is only 1/3rd of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important “hub” or centre, in particular for the northern part of the District, and it should be promoted as such. However, it must also be easily accessible to “out of town” as well as “town” residents. Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.
C123	No. The Winchester Vision is more about a culture and approach to be used to achieve a vision, a vision that it in fact fails to define. Indeed, it says as much in the Executive Summary in Handbook 3 “if the new vision was to be of any practical use, it had to consider how to effect change in the city. This report outlines the mechanisms recommended to make change happen.” That is not a vision. I also do not accept a vision that represents “a fundamental shift away from city centre projects towards building

	resilient local communities who will then be able to collectively tackle the challenges that face us in the coming years.” <b>The “emphasis on small improvements at the local level, based on the freedom to self-organise and through greater access to local resources” is both admirable and necessary but it is not sufficient as a basis for the Local Plan.</b>
C124	Considering the last year, I think many aspects of the way we live our lives will change - more working from home, more appreciation of outdoor space, shopping on line ( ie not a high street of shops) and a continued focus on the environment. Any long term plan that was written before 02/20 should be reassessed.
C125	There needs to be acknowledgement of the current development work that is being completed and how the council will ensure that the necessary infrastructure expansion and improvement is also delivered. Currently there has been a lot of housing development without the requisite improvement or expansion of key infrastructure such as roads.
C130	No idea!
C136	I have not read this document as I live in a rural area of the district
C144	The Town Forum is very relevant to Winchester. Other contributors to the Local Plan such as Parishes and rural areas need to be heard.
C148	yes
C149	Yes - the idea that <b>any area of housing should have a village green space for community interaction</b> . Safe walking routes for humans and green corridors for wildlife should connect throughout a settlement whether it be Winchester City or Bishop’s Waltham market town. Is all the new housing on Winchester Road Bishop’s Waltham, the new housing near the roundabout at Wickham and developments in Swanmore and Waltham chase offering this quality of living with walking routes and additional local facilities or is it just creating more need for car use ?
C155	The "One Great Win" 2030 website is very difficult to navigate. It is not clear what, if anything, it actually hopes to achieve. The document is full of meaningless jargon and management speak and doesn't seem to say anything useful about the city. For example: "Winchester 2020-2030 must focus on how change happens, rather what the change is". I would argue that most people in the district have a very clear interest in what change is happening in their district (for example the many people who have become involved in the Save South Winchester Campaign Group). <b>We wish to be involved in what changes are happening in our area to ensure that we are not subjected to inappropriate development solely focussed on profit to the huge detriment to our local area and environment.</b> The Town Forum seems to have been a huge waste of public funds which could have been better spent on any of the issues currently facing our district.

C156	The document is an utter joke, just full of business-speak which adds no value, really hard to understand what it is even talking about. A classic, 'Too Long, Don't Read' document.
C160	The 2030 Vision embraces excellent goals - the shift away from car travel, walking and cycling, the 15-minute co-created city, and resilient local communities. The current local plan has unfortunately had the opposite effect, imposing <b>hundreds of new houses where there are no new jobs, shops, pubs, doctors, dentists, schools, pavements, footpaths or cycleways</b> . MTRA3 has seen new houses fill every available space within settlement boundaries or infill along road frontages, damaging villages' <b>individual identity and rural character</b> . The increase in commuter traffic <b>means village residents are discouraged from walking or cycling on lanes and roads</b> which are often narrow and without pavements. The next local plan must be radically different. It may be that Winchester district housing needs cannot be met within the existing city limits. <b>Research into the 'car paradox' should embrace the whole district.</b>
C164	unknown.
C168	The 2030 Vision embraces excellent goals - the shift away from car travel, walking and cycling, the 15-minute co-created city, and resilient local communities. The current local plan has unfortunately had the opposite effect, imposing hundreds of new houses where there are no new jobs, shops, pubs, doctors, dentists, schools, pavements, footpaths or cycleways. MTRA3 has seen new houses fill every available space within settlement boundaries or infill along road frontages, damaging villages' individual identity and rural character. The increase in commuter traffic means Shedfield residents are discouraged from walking or cycling on lanes and roads which are often narrow and without pavements. The next local plan must be radically different. It may be that Winchester district housing needs cannot be met within the existing city limits. Research into the 'car paradox' should embrace the whole district. The 2021 census must inform key decisions
C177	No
<b>C179</b>	The comment has been removed as the respondent requested their response not to be published
C186	Unless and until those elements can be examined in the context of the overarching vision for the area who can say? Unless, of course, the local plan is simply stitching together the hopes and expectations of various sub areas.
C190	Yes - the 15-minute city idea is compelling.
C191	Start again.
C192	This Report did not draw on a large number of people's opinions. <b>The majority of residents (approx two thirds) live outside and need to be consulted (e.g. through the Parish Councils).</b>

C197	The consultation process and community engagement has itself been very helpful - and should be continued. <b>The improved use of social media is an object lesson for the Council</b> - and it's need to improve it's own website and communications.
C198	I have not spotted anything after a quick look, but it would take some time to review properly!
C199	I do not know
C201	The comment has been removed as the respondent requested their response not to be published
C208	I'm not very interested in the old city of Winchester. My nearest town are Whiteley and Fareham, which have Leisure facilities, shopping, and convenient parking.  Like many in the Southern Parishes, I worry that there is <b>too much focus on the 30% of the district's population that lives in the area covered by the Town Forum and adjacent parishes.</b>
C214	There is no mention of <b>Leisure and Sports</b> in this vision, which in my opinion is a glaring omission  No mention of the preservation of <b>green belt protection.</b>
C215	Don't know.
C216	not sure
C220	I don't know enough about the Winchester 2030 document.
C224	"5" OPTION
C226	<b>Winchester City is only 1/3rd of the District</b> , or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important "hub" or centre, in particular for the northern part of the District, and it should be promoted as such. • However, it must also be easily accessible to "out of town" as well as "town" residents. Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester "town" should be sought to balance the Town Forum 2030 views.

Views from

	representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.
C231	<p><b>Winchester City is only 1/3rd of the District</b>, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important “hub” or centre, in particular for the northern part of the District, and it should be promoted as such.</p> <ul style="list-style-type: none"> <li>• However, it must also be easily accessible to “out of town” as well as “town” residents. Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.</li> </ul>
C234	Not that I have identified
C236	The Local Plan is not just about Winchester itself but also includes and affects a much wider geographical area. By its very nature and associated consultee profile and demographic <b>the views expressed in Winchester Town Forum's Winchester 2030 document may not necessarily be representative of the views and priorities of the wider Winchester area</b> which are under the scope of the Local Plan. Any elements adopted in the Local Plan from reference to the Winchester Town Forum's Winchester 2030 document therefore need to be considered carefully as to whether they are appropriate and fully representative.
C239	An emphasis on the reduction of car use.
C241	The Town Forum's views are Winchester Centric when the surrounding district has the bulk of the population and area. Whilst it is important the City continues to be treated as the hub particularly for the Northern part of the District <b>full cognisance of the requirements of the other parts of the District should be determined and incorporated.</b>
C243	For the urban area almost certainly but why such a vast effort focused only on the city and its residents, just 33% of Winchester District population. <b>The needs and aspirations of the rural areas, ie. the majority, appear to be secondary.</b> The slogan 'onegreatwin' rather sums it up I think!
C244	The Town Forum's plan is Winchester City and Centre and is represented by Town councillors with <b>no input from Rural Councillors representing the larger area of the district and greater population.,</b>
C245	No
C248	<p>Many of the aims expressed are unrealistic - eg carbon neutral by 2030 . The aims require revisiting throughout the district.</p> <p>There is a lack of understanding regarding cycle use and traffic management - inappropriate policies from a low sample rate .</p>

C249	There is clear intent to move away from private cars within the city. <b>There must be improved public transport if this is to happen.</b> Also- ridden Bicycles and pedestrians must be kept separate. Shared bicycle and walking space does not work- the cyclist appears to have the same mentality as the car driver in that as they are going faster- others need to move out of their way
C250	Yes, most of them!
C253	Winchester City is only one-third of the District with 40,000 residents so <b>the Town Forum document should not be the only reference.</b> Winchester is an extremely important hub and should be promoted as such. There needs to be balance with access available to residents in town as well as those out of town. <b>Views from organisations representing the majority 80,000 residents who do not live in town should be sought to balance the Town Forum 2030 views.</b>
C255	Winchester City is only 1/3rd of the District-or 40,000 residents-so the Town Forum 2030 document should not be the only reference .Winchester is a vitally important hub especially for the northern part of the of the District and should be promoted as such. Also it must be accessible to " out of town " as well as town residents. Views from representatives eg Parish Councils representing the majority of 80,000 residents of the District should be sought balance and enrich the the Town Forum views.
C256	Development should prioritise Brownfield sites. Greenbelt of the local area should be a priority. A Strategic Gap was allocated south of Winchester some years ago. It has not provided any protection to the local area. Greenbelt should do this.
C260	As far as i'm aware, <b>CALA who are delivering the largest urban extension project in Winchester have not been asked to contribute which would seem a huge missed opportunity.</b> We would welcome the opportunity to become more involved moving forward.
C262	Winchester City is only a third of the district so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important hub or centre and should be promoted as such. However, views from representatives of the majority 80,000 residents who use Winchester, but don't all live there, should also be sought to give balanced views.
C274	Where is Option 5 which properly considers: *Developing <b>Use of Brownfield sites</b> and previously developed land *Development of the <b>City space to include more housing</b> as other cities have managed *If Free Ports are to be developed then local use of land in Hampshire close to these should form part of the over all plan and should reduce the need for further housing away from these commercial developments.

	<p>*Small developemnts in smaller places would have a great impact on the need for housing. This was seen in the past by Council houses built in small groups and older residents bugalows tucked away in very small communities.</p> <p>*Develop a <b>Green Belt strategy</b> to preserve limits and make clear that sprawl to line the pockets of developers will not be accepted.</p>
C276	Have not seen nor heard of this document before.
C277	The <b>flexibility</b> to be able to change with changing times and changing technologies should be a vision for the whole district.
C278	<p>No Whilst i confess to not reading ever word, its a long document, everything I did read about was for Winchester City. <b>There was nothing for the surrounding rural areas.</b> Please point me in the right direction if there is.</p> <p>As a small Hamlet we demand the <b>right to live as we have chosen to, keeping our heritage and our countryside/farming life styles alive and to be able to pass on to our children.</b></p> <p>Winchester City does not seem to allow for a rural/farming way of life.</p> <p><b>Surveys from small Parishes should be undertaken</b> and those Parishes that have put a plan in, you should respect and take notice of.</p> <p>The City is run completely differently from the countryside.</p>
C280	<p>I feel the Winchester town forum 2030 document has 'woolley' titles.</p> <p>The key focus areas for consideration in any local plan must be:</p> <ol style="list-style-type: none"> <li>1. <b>Movement and travel</b> - promotion of safe cycling and pedestrian routes. Reduction of vehicles in urban areas to reduce both noise and air pollution.</li> <li>2. <b>New homes</b> - promoting brownfield redevelopment first in an urban location near to amenities. Its too easy just to develop new greenfield sites. This should be the final option.</li> <li>3. <b>Economy</b> - growth of businesses and promotion of enterprise.</li> <li>4. <b>Environment</b> - Promotion of amenities for culture, leisure, recreation and wellbeing.</li> </ol>
C282	yes, problem solving and enabling ,consult local communities with local forums during major planning decision making, not once every 10 years.
C286	There should be a requirement to consult Parish Councils in addition to WTF 2030. Without this very local and 'on-the-ground' inclusion vital needs of the outlying areas will not be taken into account.
C290	I believe Winchester is too remote to understand our rural needs

C291	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C292	<p>This report did not contain a large number of people's opinions. Other districts outside Winchester Town need to be consulted through Parish Councils to ensure an all-encompassing vision is achieved.</p>
C293	<p>There may be some elements that would support future thinking about the use of Winchester city centre, but it is less relevant for the wider district and rural areas. Any vision for Winchester must also recognise the interconnectedness with the surrounding towns and villages. Winchester will remain a key centre of services for many and needs to continue to be accessible (including by car) for those who need to travel to it.</p>
C298	<p>The comment has been removed as the respondent requested their response not to be published</p>
C305	<p>We are not very interested in the old city of Winchester. Our nearest towns are Whiteley and Fareham, which have Leisure facilities, shopping, and convenient parking.</p> <p>Like many in the Southern Parishes, I worry that there is too much focus on the 30% of the district's population that lives in the area covered by the Town Forum and adjacent parishes.</p>
C306	<p>NO</p>
C309	<p>See answer on previous question.</p>
C314	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C315	<p>The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City. Whilst we recognize that Winchester City will play an important ongoing role, it is important that other parts of the district are not left</p>

	behind. Particularly the market towns and larger villages, which will need to grow in order to remain vibrant settlements and support the wider rural communities and economy.
C316	Perhaps you could see my preceding comment regarding the lack of thought given to the villages outside of both the Winchester and the South Down areas.
C321	Notes above.
C325	needs to consider the wider area
C326	<p>aspirations to minimise carbon footprint and pollution thus protecting the historical environment in particular, can be welcomed.</p> <p>High Streets (city, town and village) need to be vibrant and a place that draws people in... There are many challenges now with declining economics in the high street and the to meet the pressures posed by the internet's on-line economy. These challenges need to be fully reflective in developer offerings in particular backed by real evidence of demand, not pie in the sky opportunistics. The local plan should attempt to address this problem and be redrafted accordingly.</p>
C327	I am not familiar with this document and am therefore not able to comment.
C329	Yes - a similar forum for the many rural settlements to apply the knowledge/competence/opportunities of the WTF across the district.
C330	I have not read this document.
C331	<p>Winchester City is only about a third of the District by population. This must be remembered.</p> <p>Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester "town" should be sought to balance the Town Forum.</p>
C334	not known
C335	I like the focus on people and giving local communities more say in what happens in their neighbourhood
C340	<p>Problem solving and enabling is often pitched as dialogue between the public sector, action groups and the wider general public and on occasion can exclude the key development industry.</p> <p>As one of the principal enablers of social and economic improvements within a community, the Local Plan Vision should embrace the ethos of problem solving and engagement, but with a focus on including local house builders in that dialogue. Such an approach will assist in shaping local projects, housing tenure and assist in explaining how proposals are formed.</p>

	<p>As a housebuilder based within Winchester City, many of the staff are also local residents and therefore have a keen and vested interest in how the City and villages are to grow during the Plan Period.</p>
C342	<p>"care about our history, heritage and setting; improve transport, infrastructure and air quality; create a green and environmentally friendly area"</p> <p>The above aspects of this would be relevant to the updated Local Plan, worded to cover the whole District and not just Winchester itself</p>
C343	<p>There are many recommendations in the Part 3 report we would like the Local Plan to endorse and adopt a vision and objectives that will bring them about.</p> <p>Section 4 suggests a way towards removing private cars from the streets and public spaces.</p> <p>Section 5 on the 'fifteen-minute city' makes many recommendations on maximising low carbon access to services including food. We support its emphasis on the need for designing in community hubs for existing and new areas (see also para 7.12).</p> <p>Section 6 on the 'Co-created-City' recommends an approach to local area design that will engage the whole community often informally, and sometimes more formally. For example para 6.8 recommends a more open-ended approach that will empower more community-based initiatives and these could include designation of space for community food production and pop-up community cafés.</p>
C346	<p>don't know</p>
C347	<p>Winchester City is only 1/3rd of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important "hub", in particular for the northern part of the District, and it should be promoted as such.</p> <p>However, it must also be easily accessible to "out of town" as well as "town" residents. This means that views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester "town" should be sought to balance the Town Forum view.</p>
C348	<p>Only if it's appreciated that this only covers the minority of this Local Plan area</p>
C351	<p>I don't know. What does SNDP stand for??? Or do you mean SDNP (South Downs National Park)?</p>
C352	<p>Benefits of wide consultation and concentration on the 5 primary areas of concern: Home, culture, ecology, movement and lifetimes.</p> <p>Strong leadership with council and community working together to solve problems, encouraging walking and cycling with less car use, could be used to help inform a vision for the Local Plan.</p>

C353	<p>Two main points:</p> <ol style="list-style-type: none"> <li>1. I support more walking and cycling for lots of reasons, but I don't think the five minute city idea across the district is useful / realistic. Local shops are struggling to survive and large developments based on car transport, like Barton Farm and those in Chandler's Ford, are likely to be the future. Efficient, low pollution public transport linked to walking and cycling would be my preferred way ahead.</li> <li>2. People power / better engagement is a major (but vague) theme - but the real question is how to achieve it? I think working at parish / ward level, coupled with using online media, can be very effective</li> </ol>
C356	<p>These are the relevant points copied and pasted from the document:</p> <ol style="list-style-type: none"> <li>1. Develop A Widespread Consensus  There is a need for widespread agreement before projects are proposed. This will help avoid the push back that is experienced before things are even started. Understand the effects of movement choices and street design decisions on all user groups.  To achieve all this, we need to foster conditions that allow for a more diverse culture; a more creative approach to problem solving; open-minded inclusive leadership/authorities; future-thinking leaders in the City / County Councils – people who aren't tied up in the 'establishment' and aren't scared to make bold decisions for the common good.  Trust is a key absence between groups in Winchester at the moment and it's perhaps the most significant reason so little moves on here – relationships aren't working well enough. Too many experiences, skills, realities are left out of the conversation and planning in the middle of life here.</li> <li>2. Make things happen  Appoint a 'Making Things Happen' person / organisation. Aiming for Increased resident happiness as no longer just talking / consulting. If council have heard that residents no longer want just talking then they might realize that 1) in own self interest to make things happen if want to get re-elected 2) council does not have good track record on this so better get in an expert.</li> <li>3. Small Businesses Need a Voice</li> <li>4. Collaboration, Participation &amp; Systemic Change  The process ahead needs to include the space to catch emerging ideas. It cannot be fixed or rigid. It needs to flex with changing times, changing attitudes, and changing technologies.  Collaborate with cultural, ecological, and business groups.</li> <li>5. Identify a Champion</li> </ol>

	<p>Which political leader is willing to take a stand to address these crises and make the changes that are needed? Individual councillors fear alienating the small but shrill voices.</p> <p>6. Avoid Misrepresentation Create an assembly of people to make it known what the public really thinks.</p> <p>7. Commit to Who Will Make It Happen There is a lack of consistency of technical officers working on Winchester projects. Council officers should be allowed to see projects through to completion.</p> <p>8. What is Winchester We are combining this research with making sure that all areas of Winchester are feeling this sense of community, and not just the centre. For a city rich in assets worth investigating and spending time around, it's very hard to arrive well here, with little sense of what Winchester is. We need to boost the placing of people coming into the city centre at those key points, with just a little bit of conscious extra theatre. "You are here – and this is why you are here."</p> <p>9. Task force Draw together a task force to lay out Winchester's core ecological vision values – it's core brand guidelines for sustainability, where heritage, culture and biodiversity meet. Then identify existing digital, physical and community initiatives that have tried to map assets, routes and stories of Winchester The principle of the working group process is the way to make a vision for the city. Collaborative, listening, empathetic. And symbolic of this hope is the spirit of: "returning the streets to the people – along with the natural environment." What is it about Winchester's city centre that drives otherwise sane and undemonstrative folk halfway to distraction? In part it appears to be due to a lack of action.</p>
C361	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum's Vision but the work of a wide range of organisations, including Parish Councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p>
C363	<p>It doesn't seem to include the outlying areas, such as Oliver's Battery where I live.</p>
C364	<p>Most people in the district do not live in Winchester which should be considered when informing the vision</p>
C365	<p>The recommendations (report part 3) include many useful ideas, especially section 4 on ways of removing traffic from the streets of Winchester; section 5 on the fifteen-minute city (which could apply equally to areas outside the town); and section 6 that emphasises the need for infrastructure to encourage "co-creation," eg cafes and squares.</p>

C372	The Local Plan should be informed by the work of a wide range of organisations and community groups, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester city centre centric. For example, the “City made by Walking” theme in the Town Forum’s document does not work for “peripheral” parts of Winchester where benefits would be felt greatest. In Oliver’s Battery we find it difficult to walk to and from town to access services and employment and residents therefore rely on buses and cars which could be avoided.
C376	I'm sorry I haven't read it
C382	As implicit in the previous section I believe that Winchester City , while extremely important, is only a part of the District. As such it is essential that the views, opinions and suggestions for all of the other areas of the District should be canvassed and weighed. The organisations ( Parish Councils, etc) are in place and ready to act in this communication process.
C383	The principle of a 15 minute neighbourhood should be applied to the vision for the Local Plan. This approach to the planning of housing and local services to reduce reliance on the private car aligns with the carbon neutrality action plan and climate change agenda.
C386	The flexibility to be able to change with changing times and changing technologies should be a vision for the whole district.
C388	The Local Plan for the whole district including Winchester Town needs to be updated to reflect changing social realities, and in particular: <ol style="list-style-type: none"> <li>1. the decline in retail space required, due to increasing online shopping;</li> <li>2. the consequent release of town centre space for housing, thus reducing car journeys;</li> <li>3. this should prioritise small units suitable both for first time buyers and older people wishing to downsize, thus releasing family homes to the market;</li> <li>4. there needs to be more emphasis on the services and facilities available in outlying neighbourhoods, to reduce the need to travel;</li> <li>5. the pandemic has highlighted the importance of open spaces and access to Nature, such that protecting and enhancing rural areas on the edges of towns must be an absolute priority, with a presumption against any large scale developments on greenfield sites.</li> </ol>
C394	There is a once-in-a-generation opportunity to change approach after the pandemic. Maintaining unspoilt countryside (by not building houses on it), changing local travel to provide low carbon options, emphasising the historical context of the City, enhancing cultural facilities and severely limiting new commercial and retail growth.
C396	Yes create cycle friendly radial routes on Andover Road, Romsey Road, Stockbridge Road and St. Cross Road.

C397	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C399	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C404	<p>I was not aware of this consultation and so this cannot be said to draw on large numbers of local opinions. As such the wider winchester populations to be consulted in relation to this. It is important that Parish councils are informed as they are able to gather the opinions of their parish council or make their residents aware of this consultation.</p>
C407	<p>The local plan needs to contain feedback from parish councils as well as the Winchester Town Forum. Areas on the edge of the city e.g. Olivers Battery face different issues to those in the city. We are less able to walk to services in the city centre.</p>
C408	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p> <p>The Local Plan should reflect not only what is important to anything that impacts Winchester centrally but should take account of all those parishes and surroundings for which Winchester is responsible. So for example if WCC wants to encourage greener travel such as walking and cycling, then it should consider how this can be delivered for those living on the outskirts. For many residents the only modes of travel to access the city easily are by car and bus.</p>
C416	<p>I’m not qualified to answer.</p>

C421	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum's Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.</p> <p>For example, the "City made by Walking" theme in the Town Forum's document does not provide the focus needed for "peripheral" parts of the Winchester Town. Oliver's Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C428	<p>As the local plan affects a wider area than Winchester City itself, the views in Winchester Town Forum's Winchester 2030 document may not be representative of the views of the wider Winchester area. Views from the Winchester Town Forum's Winchester 2030 document should be considered carefully as to whether they are appropriate and representative of the wider area.</p>
C429	<p>The 15-minute neighbourhood could possibly be appropriate elsewhere, but I believe that a level of consultation needs to take with the rural areas equal in significance to that of the town forum. The rural issues are very different.</p>
C436	<p>the emphasis on new ways of working with the public?</p>
C437	<p>Winchesters view is very local to Winchester and really fails to consider the wider and further districts of the area. I feel that they fail to understand the small villages view and not want to uphold the local communities wishes.</p>
C441	<p>Commitment to ecology and preserving the historic character of the city</p>
C452	<p>I am sure there can be but I am frustrated that this is the first time I have seen mention of OneGreatWin. Why is there not more effort made to promote this. How many people were consulted?</p>
C453	<p>Yes, reducing the "gravitational" pull of traffic by developing over the car parks in the centre and using the historical street pattern. I think car parks sterilise city life. More pedestrianised roads, like the high street, and small developments of housing, hospitality, independent retail where possible, perhaps daycare (playgroups etc) and other small company offices could be managed on a local hub scale around the parts of the centre leading to Hyde, Fulflood, St Cross, Badger Farm and (in time) the Barton farm development?</p>
C457	<p>Use the "15 Minute City " elements as described in the Town Forum's commissioned works summing up statements. The 'Russian Doll' concept encompasses things well in the same remarks.</p>
C461	<ul style="list-style-type: none"> <li>• Winchester town is only 1/3rd of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important "hub" or centre, in particular for the northern part of the District, and it should be promoted as such.</li> <li>• However it must also be easily accessible to "out of town" as well as "town" residents. Views from</li> </ul>

	representatives (eg Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.
C462	The concept of the 15 minute city and the move towards more sustainable forms of travel.
C475	Keep new housing on brownfield sites in existing towns
C477	Unsure
C478	The report recommends that local people must map brownfield sites for housing. Development should be small scale and not spread to green spaces outside current city boundaries. Open countryside and green space is as vital to Winchester's identity as the statue of Alfred. Protect green spaces for people, biodiversity and health and wellbeing. Put the environment at the heart of all decisions.
C481	I feel that there has been considerable consultation via WCC's 2020-2030 Vision. In this the biggest feature is that green space must be protected and climate change must be at the heart of all decision making.
C482	It is not for me to say however my clear view is we should have had a chance to produce a vision for the District
C487	Winchester City is only one-third of the District with 40,000 residents so the Town Forum document should not be the only reference. Winchester is an extremely important hub and should be promoted as such, it and areas surrounding it need protecting from over development. There needs to be balance with access available to residents in town as well as those out of town. Views from organisations representing the majority 80,000 residents who do not live in town should be sought to balance the Town Forum 2030 views.
C489	15 minute towns
C491	Possibly but I do not accept many of the premises underlying the "vision". I find the word vision rather suspect and full of hype. I think that there is a surfeit of consultants in the planning of our futures. Rather too many "12 year olds" and bright ideas involved.
C492	Link to document please.
C493	Safer cycling for all ages. Include parish councils who represent users of Winchester City.
C494	It's great majoring on Winchester Town, however you are meant to be looking at Winchester District. Even your consultation document, above links, gives a contour map as part of it glossy brochure. People on the outside of the flat flood plain, such as Olivers Battery, especially if not over mobile will not be walking into TOWN. Dedicated cycleways will help some but most are reliant on cars because of the poor bus service coverage if you live away from the main arterial roads.

C497	<p>Winchester City is only 1/3rd of the District, or 40,000 residents, so the Town Forum 2030 document should not be the only reference. Winchester is a vitally important “hub” or centre, in particular for the northern part of the District, and it should be promoted as such.</p> <p>However, it must also be easily accessible to “out of town” as well as “town” residents. Views from representatives (e.g., Parish Councils) representing the majority 80,000 residents of the District who do not live in Winchester “town” should be sought to balance the Town Forum 2030 views.</p>
C498	No, the present documents all go against at least one of the vision statements and therefore should not be used.
C500	To utilise brown field sites as much as possible and to protect the rural nature of Winchester & it’s surrounding areas.
C501	The reduction in emissions.in the city centre and improving active travel options if they are covered in the 2030 Winchester Town Forum document
C507	It is a shame that you do not feel the collaborative work done around Silver Hill is worthy of including in your Local Plan. Local people went through an inclusive and truly collaborative process to achieve that report - unlike this work. This report carried out by your consultants may be very 'hands-on' but feels way more like a 'top down' approach (constantly referring to 'you' and 'your feelings' 'your area') rather than the earlier collaborative approach which made people feel like working with you, the City Council, and generated significant 'buy-in'.
C513	City made by walking. As a resident who worked in Winchester and lives in Olivers Battery, it took me 55 minutes to walk into town (Im a fast walker). Anyone living further out will definitely use the car and definitely is not City made by walking.
C514	No
C515	<p>Welbeck supports the findings of the Winchester Vision. Albeit outside of the Vision’s study area, land at Mount Edgcombe Farm is well placed to assist WCC in delivering upon the six ‘critical values’ outlined in the Vision.</p> <p>It is clear from the Vision that the overarching ‘big idea’ is the “The Fifteen Minute City” - a fundamental shift in focus away from mobility and movement towards easy local access to goods, services, culture, and social activities. The emerging masterplan proposals for Mount Edgcombe are built around the principles of ‘walkability’. The concept and layout of the development will encourage people to walk to essential facilities, cycle and enjoy the outdoor environment as fully as possible. It will be easy to reach local facilities within Denmead (education, shops, and community and recreation areas) on foot or by bicycle rather than by car.</p> <p>One of the key outcomes from the consultation undertaken to underpin the Vision was the desire of respondents</p>

	<p>to be able to walk through good public spaces that actively benefitted health and well-being, providing connection to community, nature, culture, and the cities rich ecology. Development at Mount Edgecombe could facilitate direct access for new and existing residents to the surrounding countryside and woodland.</p> <p>One of the key conclusions reached in the Vision was that people wanted to shift awareness away from “big city centre projects” towards building resilient communities who would be able to collectively tackle the challenges that face us in the coming years. Development at Mount Edgecombe Farm would form a natural extension to the existing settlement pattern where it would make a positive contribution to the future housing needs of Denmead, and the district as a whole. This relationship, together with the strong accessibility credentials of the Site, make Mount Edgecombe a logical and sustainable location for future housing growth.</p>
C516	<ol style="list-style-type: none"> <li>1. The idea of a 15 minute city could help ensure that residents in all communities throughout the district have access to essential food services – to food retailers and enterprises selling food, to cafes, restaurants, community hubs and other places to eat food, and to community growing spaces to grow food. The local scale of this could encourage more diversity in the retail offer, with encouragement to independent retail, and food entrepreneurs, as well as more diversification, such as the local food shop that is also a community hub. This in turn could help ensure more diverse access to food, with the benefits to residents’ health and well-being that this could bring, as well as help to encourage a food infrastructure based on shorter and value based supply chains, which is less carbon intensive.</li> <li>2. The idea of open- ended projects or events throughout the district could also enable a more diverse food retail experience by providing public space that could be used for a variety of events, such as market stall, or a coffee van at different times of the week. This ties in with the desire in the vision to give streets and spaces back to people to be used in creative ways.</li> <li>3. Hub/pause spaces carved around nodes or meeting points to make community gardens and public squares, could include community spaces for growing food and places to eat food socially, with, for example, pop up cafes.</li> <li>4. The suggestions around mapping could include mapping access to food, whether retail, restaurants, cafes, and food growing spaces, and access to training on cooking and growing skills.</li> </ol>

	5. All public realm and open spaces should cater for all ages and genders
C523	<p>If this is the document referred to:  <a href="https://democracy.winchester.gov.uk/documents/s12192/211_SS_200319_WTF-Project-Team-Intro_EDIT%202.pdf">https://democracy.winchester.gov.uk/documents/s12192/211_SS_200319_WTF-Project-Team-Intro_EDIT%202.pdf</a></p> <p>Then I think not. The 'one great win' idea may be of interest to vision formulation but unless it takes in the views of the majority of people then the vision is likely to be led by a small group of engaged activists and not necessarily in the interests of the silent majority</p>
C528	The emphasis on facilitating change and also providing for more sustainable communities through a more flexible approach to spatial planning. This can be achieved whilst maintaining and enhancing local distinctiveness through enforcing good design which includes biodiversity net gain and encouraging more sustainable modes of travel such as cycling and electric vehicles.
C529	This area will be increasingly attractive to tourists and visitors, and so to retain its importance as an area of natural beauty and protection of all aspects of the environment, constraining features will need to be introduced to limit the number visiting. (Constraints might be access charges, parking limitations, even perhaps fewer shops, pubs, cafes and restaurants).
C532	The 15 minute city, whilst having practical limits within more rural area, should be considered in spirit throughout the Local Plan. All areas should have the necessary resources to be sustainable within easy reach.
C535	<p>1. The idea of a 15 minute city could help ensure that residents in all communities throughout the district have access to essential food services – to food retailers and enterprises selling food, to cafes, restaurants, community hubs and other places to eat food, and to community growing spaces to grow food. The local scale of this could encourage more diversity in the retail offer, with encouragement to independent retail, and food entrepreneurs, as well as more diversification, such as the local food shop that is also a community hub. This in turn could help ensure more diverse access to food, with the benefits to residents' health and well-being that this could bring, as well as help to encourage a food infrastructure based on shorter and value based supply chains, which is less carbon intensive.</p> <p>2. The idea of open- ended projects or events throughout the district could also enable a more diverse food retail experience by providing public space that could be used for a variety of events, such as market stall, or a coffee van at different times of the week. This ties in with the desire in the vision to give streets and spaces back to people to be used in creative ways.</p>

	<p>3. Hub/pause spaces carved around nodes or meeting points to make community gardens and public squares, could include community spaces for growing food and places to eat food socially, with, for example, pop up cafes.</p> <p>4. The suggestions around mapping could include mapping access to food, whether retail, restaurants, cafes, and food growing spaces, and access to training on cooking and growing skills.</p> <p>5. All public realm and open spaces should cater for all ages and genders</p> <p>6. Co-created city could encourage local enterprises and small businesses, including those created around food that could be trialled anywhere in the district</p>
C539	<p>Not really. Two things distressed me about the document. Firstly it was almost all Winchester town focussed. I do not live in Winchester town. Secondly it cost £43,775. I am not sure what value was drawn from it.</p> <p>Where I live the main issues are: pot holes and poor road maintenance including a lack of salting in icy periods. Terrible road drainage and consequential flooding. Non-existent wifi and mobile telephone signal coverage. Silly restrictions on access to the Alresford recycling centre. 5 miles to the nearest school or pharmacy, 13 miles to the nearest hospital.</p> <p>I love where I live but I am not sure that WCC is focussed on our communities' needs.</p>
C540	<p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City. Whilst we recognise that Winchester City will play an important ongoing role, it is important that other parts of the district are not left behind. Particularly the market towns and larger villages, which will need to grow in order to remain vibrant settlements and support the wider rural communities and economy.</p>
C542	<p>Some elements should be used with caution such as the "fifteen minute city model" to ensure that disabled people are not further disadvantaged. Vehicular access needs to be retained for people with limited mobility noting that this group is wider than just blue badge holders.</p> <p>The city needs to be accessible which includes places to sit and toilet facilities, and pavements should be kept clear to make them accessible for the visually impaired. Care also needs to be taken with making pavements</p>

	<p>shared with cyclists or scooters since these can present dangers to those who are disabled.</p> <p>That the handbooks make almost no reference to the needs of disabled people is a serious omission.</p>
C543	The provision of a northern relief road to speed traffic around the city in the event of issues on the M3/A34 to prevent goods traffic using mainly rounds serving local housing.
C549	<p>It would be very interesting to consider the reverse.</p> <p>It might be constructive to explore whether parts of the district which are outside the SDNP, but adjacent, might benefit from creating corridors to SDNP - please see the Nature Recovery Network:  <a href="https://www.gov.uk/government/publications/nature-recovery-network/nature-recovery-network">https://www.gov.uk/government/publications/nature-recovery-network/nature-recovery-network</a></p>
C550	The process elements are fine, but the What is still vitally important and has not been addressed.
C556	Ecology
C559	The Winchester Town Forum's ("WTF") work is commendable, but it mismatches with the purpose and scope of the emerging statutory plan. On purpose, the WTF work does not address how the statutory plan will deliver housing, jobs and infrastructure for the district, where very difficult decisions need to be made, which are essential to delivering sustainable development and growth. Put another way, local, green decisions do not provide sufficient strategic oversight in relation to the role of the district as a whole, and 'flex with the times' does not sit well with a policy-led planning system, albeit that 'other material considerations' and political decision making provides plenty of scope for flexibility. On scope, it is unclear whether the WTF work will translate to the rest of the district, and the fifteen minute city could be interpreted as putting all growth within 15 minutes of the city. Despite these concerns, however, the TWF work reads very well; and it is genuinely innovative. If it can be made to work - excellent, but very few people vote for development near to where they live.
C560	unaware
C561	Take account of how the Winchester high street has suffered pre and post pandemic. This is where there needs to be investment and re-development - close to services, employers and existing infrastructure
C563	Resident views on overbuild of housing and transport links
C566	<p>Business and Culture: Farming is still a major enterprise in this area and some of the best soil is here. We must not build over such an asset.</p> <p>A big new town here would destroy the culture and lifestyles of many of the people who live here.</p>
C567	The Local Plan should be informed not just by the findings of the Winchester Town Forum's Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming

	<p>excessively Winchester centric.                  For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C568	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.                  For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C569	<p>The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester centric.                  For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.</p>
C570	<p>Yes, I think the Movement handbook could be used, possibly others too.</p>
C571	<p>The comment has been removed as the respondent requested their response not to be published</p>
C574	<p>The town plan does not sufficiently focus on the preservation and display of the unique historical character of Winchester, the Saxon and Roman heritage should be excavated and made accessible to tourists. Retail outlets are no longer a viable business model for the town, offices and homes offer no amenity value to attract visitors.</p>
C576	<p>probably but the main thing is not to allow one developer to develop large areas, and to protect old buildings not knock them down because it is cheaper to do that. The planners have done an enormous amount of damage to Wincheste over the years with their 'good' ideas</p>
C578	<p>Part 3 Section 4 for both questions. The Local Plan should embrace the vision of a city where movement priority is given to pedestrians, cyclists and public transport and every sensible means is adopted to restrict the use of cars to essential journeys.</p>
C580	<p>One of the great assets of the City Council District, which the vision should recognise, is that the exceptional quality of the Historic City is balanced by the exceptional countryside and smaller communities both in and outside the National Park, where the majority of residents live. The Vision needs to explore how to build on this special duality of complementary but contrasting attributes.</p>

	<p>It is good to see that Winchester Town Forum have progressed the Vision for Winchester 2030 but, whilst it undoubtedly deserves a place in this consultation document as an appendix, we do not believe that it should in itself be driving the overall Vision as is implied by its position at the front of the consultation. There needs to be a balancing vision for the rural 60% of the district.</p> <p>The 6 critical values, whilst laudable in themselves, are generic to the plan-making process and not specific to either Winchester Town or the rest of the City Council area.</p>
C583	<p>Link to the web site for Mill Mead  <a href="https://www.manula.com/manuals/mediter-developments/mill-mead-planning-application/">https://www.manula.com/manuals/mediter-developments/mill-mead-planning-application/</a></p>
C584	<p>No. Most of the current plans for the built up area in Winchester are poor and lack vision. For true vision, imagination and to provide a real long term plan for the centre of Winchester the ideas of "Winchester Deserves Better" need to be followed.</p>
C586	<p>I like the following concepts:-  lots of small wins  the 15 minute town or city for our 'urban centres'  the use of land for active travel,  re use of brownfield,  always linking change to the community before implementation,  identifying small green or grey spaces or blue for meeting and enjoying</p>
C593	<p>yes</p>
C595	<p>The comment has been removed as the respondent requested their response not to be published</p>
C596	<p>This document focuses on the centre of Winchester city, for example on car and pollution reduction, and needs to be incorporated into a wider strategy covering the suburbs and surrounding residential areas. Investment in public transport incorporating these areas which are further afield is essential to this and cannot be achieved within such a limited geographical area, or without local community input/consultation.</p>
C597	<p>Please see representations made to Planning Policy, submitted in PDF form.</p>
C600	<p>Pragmatic elements of the sustainability aims and objectives should be cascaded down through the district</p>
C601	<p>Yes – the concept of 15-20 minute neighbourhoods is a sound one that has broader relevance. In Winchester this will mean having clusters of essential services and facilities throughout the city, so that everyone can walk to at least one of these clusters within 15-20 minutes. In villages and market towns, it means having a core set of services and facilities within the settlement, appropriate to its size and needs.</p>

	Another element of the Winchester 2030 document that has broader relevance is the idea that the city council should focus on enabling and supporting communities to achieve things for themselves, allowing the energy, resources and skills of the local population to be harnessed for the good of residents. Too much energy is wasted and efforts frustrated currently.
C603	The Local Plan should be informed not just by the findings of the Winchester Town Forum’s Vision but the work of a wide range of organisations, including parish councils, to avoid the risk of the Local Plan becoming excessively Winchester town centric. For example, the “City made by Walking” theme in the Town Forum’s document does not provide the focus needed for “peripheral” parts of the Winchester Town. Oliver’s Battery residents, for example, find it difficult to walk to and from town to access services and employment. Rather, they rely on buses and cars.

### 1 Letter response relating to visions

Letter Respondent ID	Link to letter sent/comment made
L29	Hopefully, yes but see below We seem to be entering a period with a huge number of unknowns in respect of work, leisure, transport and indeed practically everything. A bad time to be trying to plan!

**If the Local Plan includes a Strategic Policy on Climate Change what are the key issues that this policy should cover?**

<b>Respondent Number</b>	<b>Respondent Comment</b>
C2	Education of residents in the locality
C3	Reduce, reuse, recycle, renewables. Simple.
C4	All new development must be carbon neutral over the lifetime of the buildings. Minimises need for private transport - optimises access to public transport Access to locally supplied zero carbon/renewable energy identified on all new developments Development promotes household and community well-being
C5	Vastly expanding Public transport to enable the rural population to avoid private vehicles.
C8	It shouldn't be concerned with climate change. All climates change gradually. It is a tautology. If you mean global warming, then there is very little predicted in 80 years. We shall and should adapt slowly without impoverishing everyone.
C9	Promotion of active travel and moving away from private vehicles Accept that plan will most likely face dissent from stronger supports of private vehicles Have stringent time frames
C11	Transport, heating & insulation, no investment in fossil fuels, reduction of waste, green spaces/ trees/ wilding
C12	1 - sustainable public transport 2 - sustainable low carbon personal transport network 3 - public safety - segregate walking/cycling from large vehicles
C17	Cutting emissions; improved local food sourcing to reduce food miles; support for energy efficient buildings.
C20	Management of traffic in Winchester and recycling
C22	Reduction of car fumes
C23	Any policy needs to be fully justified having regard to national policy and the available policy alternatives. it needs to be realistic in its ambition, and take account of the step change that the Council is seeking to achieve and the time necessary to get to that point. Policies should avoid "cliff edge" policy requirements that may make new developments unviable or undeliverable.

C25	<p>Reducing reliance on the car</p> <p>Building sustainable homes that are carbon neutral</p> <p>Public transport improvements</p> <p>Cycling and walking improvements</p>
C27	<ol style="list-style-type: none"> <li>1. Air quality</li> <li>2. Reduced journey times and lengths</li> <li>3. Planning requirement for carbon zero development as a fundamental requirement for all approvals</li> <li>4. No carbon-offset fund: there should be no need to introduce one because to do so means that we admit that there will be situations where it take longer to get to zero and what you gain in one area you give away in another.</li> <li>5. Increase green spaces and tree planting. preserve these as development free zones</li> </ol>
C28	Individual contribution to reduce carbon footprints supported
C31	<p>Strive to be carbon neutral by a definite date.</p> <p>Restrict new buildings. Any which are built should be to strict environmental standards.</p> <p>Grow more trees, not more houses.</p>
C32	We need to recognise that we can not get away from oil based fuels in this time scale, so please allow for this. We also need to recognise the carbon impact of digging up Winchester to install clean solutions. It may not be as neutral as we think.
C33	<ol style="list-style-type: none"> <li>1) Preservation of green space</li> <li>2) Use of green space for carbon offsetting</li> <li>3) Preservation and enhancing the existing habitat</li> <li>4) Light pollution and its impact on wild life and the loss of diversity</li> <li>5) Pollution</li> <li>6) Consideration of how we keep heat build up to the minimum. The current open space allows for cooling of the environment building further hotspots will degrade this and compound matters</li> </ol>
C36	Energy efficiency of the whole of a development, not merely the buildings & efficient transport links. To meet SA12 this requires high quality high rise development which then contributes to energy efficiency & the residents transport needs will attract public transport provision
C37	Carbon neutrality but looking at continuing to develop methods of pushing innovation. We should not swap to electric batteries and see this as good enough, there is always more to do.
C38	Transport

C40	<p>a) Restrict to a responsible and sensible response to the CC challenge.                  b) Avoid glamorous projects that are inefficient show pieces</p>
C42	<p>Reducing car usage, since this is a major carbon contributor, by improving public transport (which uses green energy), integrating a network of cycleways and footpaths. Public transport needs to be regular, frequent, linking people to hospitals, shops, schools/colleges and stations, and it needs to be cheap. More park &amp; ride schemes and dial a ride schemes in rural areas to reduce the need for car journeys.                  During the epidemic there have been less car journeys for work due to remote working, for shopping due to online alternatives so it is an ideal time to offer a 'world beating' system of green public transport as an alternative when short journeys are needed.</p>
C46	<p>Take guidance from expert organisations. I don't know enough to contribute.</p>
C47	<p>Transport - promote Active travel (walking and cycling) as far as possible - transport hierarchy: walking cycling, public transport in that order especially in Winchester town - responding to different needs in different places                  Reduce energy use in existing building stock as well as new building</p>
C54	<ul style="list-style-type: none"> <li>* Mitigation of global heating through a reduction in greenhouse gas emissions is key.</li> <li>* All existing buildings (ca. 80% of which will still exist in 2050) should be retrofitted (insulated and draught-proofed) asap to minimise their emissions.</li> <li>* Buildings heated with oil or LPG should, after retrofitting, have air-source heat pumps fitted as a priority.</li> <li>* All new buildings should be constructed and operated in a zero-carbon way (to Passivhaus, or NEF Superhome standards) with penalties for non-compliance.</li> <li>* Private cars make a huge contribution to emissions. Means must be found especially to reduce their emissions in all built-up areas.</li> <li>* Public road and rail transport of all sorts must be enhanced wherever possible.</li> <li>* Land use (including agriculture and animal husbandry) and forestry must be monitored to minimise their emissions and maximise their carbon sink potential.</li> <li>* Renewable energy (electricity and heat) should be generated within the district to at least match current consumption (600 GWh electricity, 1000 GWh heat).</li> </ul>
C57	<p>Meaningful and achievable objectives which are actually deliverable on a local level. For a period I worked in Harlow which signposted itself a "nuclear-free zone". Unclear how the wider world dovetailed with this proposition.</p>

C58	<p>Less car use.                  Greater energy efficiency in homes.                  All new homes built to much higher standards of energy efficiency.</p>
C61	<p>Less carbon use.</p>
C63	<p>Encouraging carbon free transport by positive means - providing plenty of charging points around the periphery of the City eg at Park and Rides with improved public transport by carbon free buses and taxis. '</p> <p>Making all council vehicles carbon free.                  Promoting heating from ground sources                  Ensuring that public lighting is low energy.                  Providing advice for householders on building insulation and heat sources.</p>
C75	<p>A reduction in air pollution.                  However good the local plan may be it is utterly dependant on Government action.</p>
C76	<p>It needs to encourage more efficient use of resources and alternative low carbon energy in our homes, our businesses, and common spaces.                  It needs to facilitate a sustainable ( environmental, social, and economic ) for Winchester as a hub for the surrounding communities and to encourage tourism. It needs to be easy to access for all, it needs to encourage the development of new and small enterprises that provide interest and diversity to the city and the services it provides to the community and tourists.                  It is important the Council provides leadership and demonstrates a complete commitment to being carbon zero or ideally carbon restorative in all its activities before it dictates to other stakeholders.</p>
C78	<p>How to protect the environment and areas that reduce our carbon footprint. Green areas/woodland etc.                  How to maximise resources - renewable energy generation, recycling hubs, reduction of waste.</p>
C79	<p>The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.</p>
C87	<p>Recognise reality, people cannot afford major changes to their cost base.                  Promote issues such as clean electricity use, focusing on new developments rather than forcing people to make changes where they may be very expensive.</p>
C88	<p>I think one policy that would help climate change would be the discouragement of wood burning stoves.</p>
C90	<p>Radical reduction of carbon emissions is the most important thing of all. Without that, nothing we do can succeed.                  Actions required to achieve this are many and often inter-dependant.</p>

C95	<p>flooding</p> <p>sustainable development</p> <p>encourage the use of renewable energy</p> <p>maintain existing green spaces by keeping within existing village development boundary</p>
C100	<p>moving towards carbon neutrality</p> <p>the way public transport can play a part</p> <p>improving availability of charging points for electric vehicles</p>
C101	<p>not qualified to answer this. Should coincide with National Policy.</p>
C103	<p>Types of energy - ensuring use of as much green energy as is possible.</p> <p>All new houses should be built with solar panels and water heat exchangers, sufficient enough to power those houses.</p> <p>New development needs to consider establishing cycle paths to connect those developments to local villages and towns.</p>
C108	<p>Stop building residential property on agricultural land it's ruining hedgerows and grazing and encouraging more cars on single track lanes</p>
C113	<p>Emphasis on 'fabric first' approach to energy efficient buildings</p> <p>Emphasis on increasing bio-diversity; provision of open green spaces and tree planting</p>
C114	<p>Transport. Making public transport use less oil based products and increasing the availability should be a major factor. For instance, Olivers Battery used to have two buses and hour, 7 days a week. Now it is two buses on two days a week and yet less than a mile away, buses, often empty pass at 15 minute intervals.</p>
C115	<p>Low emission zones in the city where there are no cars, more cycle lanes that are safe for cyclists to use.</p>
C116	<p>The comment has been removed as the respondent requested their response not to be published</p>
C118	<p>Transport</p> <p>Energy efficient homes</p> <p>Renewable energy</p> <p>Locally grown food/ allotments</p> <p>Green areas including meadow and woodland to increase bio-diversity</p> <p>Recycling and household waste reduction. We need to know that what goes in the recycling bin is actually recycled. There needs to be a food waste collection. Incineration and landfill are no longer acceptable so waste needs to stopped at source by encouraging the development of a circular economy</p>

C119	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.
C123	Transport Density of new housing developments Affordable housing for those who commute in to work in Winchester but can't afford to live here Higher end jobs to reduce outward commuting
C124	Recycling. Re- use. Supporting homes to be gas and oil free.
C127	Transportation across the district. Energy production District heating for new developments
C136	1. All developments must be carbon neutral 2. No offsets allowed 3. Winchester City Centre to be vehicle free during certain hours
C138	Achieving Carbon Neutrality Balanced approach to investment in renewable energy vs improved energy efficiency of more conventional energy sources - Not all renewable energy sources are without environmental impact albeit "not in our backyard". eg. rare earth metals required for batteries and solar panels are mined in China and have serious detrimental impacts to the natural environment.
C144	Stop calling I this a Climate emergency WCC need to consider the full range of carbon emissions. stop setting false undeliverable expectations. Focus on building sustainable homes and how to improve current housing stock by a strategy to include support costs to individuals that need to adapt to the changes required.
C146	Flooding
C147	- EV charging points - Solar panels - Accessibility to renewable energy - Enhanced recycling including food waste and more types of packaging - Bike lanes - Busses/ public transport
C148	not really that important

C149	<p>Insulation of existing properties,                  Highly energy efficient, carbon saving new home design standards                  Encouragement for electric cars and better public transport.                  Buy local and encourage small local businesses to provide local produce</p>
C155	<p>Commitment to small scale, environmentally friendly development on brownfield sites which protects our natural landscape and preserves green spaces around the city.                  Improvements in the public transport system (in particular affordability of local bus network) which would reduce reliance on cars. Additional bus routes should be run to residential areas such as Oliver's Battery which are currently poorly served by the city's public transport network.</p>
C156	<p>Commitment to small scale, environmentally friendly development on brownfield sites which protects our natural landscape and preserves green spaces around the city.                  Improvements in the public transport system (in particular affordability of local bus network) which would reduce reliance on cars. Additional bus routes should be run to residential areas such as Oliver's Battery which are currently poorly served by the city's public transport network.</p>
C160	<p>The key issues have been accurately defined in the consultation document.</p>
C164	<p>Increase green areas, use brown field for building and increase green spaces.                  Increase / support of renewable power (both centralised and decentralised, eg. solar panels on houses)                  Increase / support take up of electric vehicles                  Increase recycling update and range of materials taken and reduce costs to public to do this                  Strong support / encourage / incentivise new buildings with renewable built it, such as solar panels, heat pumps, etc</p>
C165	<p>Decarbonising home heating is the priority.</p>
C167	<p>Requiring developers to include PVs/ solar water panels on rooves.</p>
C168	<p>The key issues have been accurately defined in the consultation document.</p>
C170	<p>Encourage and promote renewable energy.</p>
C176	<p>Biodiversity                  Maintaining green space                  Appropriate building standards</p>
C177	<p>Traffic reduction                  Support of local transport</p>

C186	<p>As the local plan process is really just starting then perhaps more help should be given to the community to understand what the issues are? Carbon reduction needs to be explored in the three main areas: homes, jobs and travel. What is the council do in its local plan in these three areas and how much notice should be taken of what is going on in neighbouring districts? The Waterlooville development is serving a wider than Winchester need (as recognised in the SHSP which determine its fate). Moreover the dump of this development (and at Whiteley) was predicated on infrastructure that has never been provided.</p> <p>As to Question 2 below (where there is no comments box) why have these been chosen and how to they chime with the vision of the plan?</p>
C187	<p>Hampshire is a traditionally heavily forested county. Wood provides a carbon neutral energy source as well as a carbon sink. The county is rapidly losing its ash trees - the climate change plan should incorporate tree planting and the use of wood fuel both on a household level (with education around clean burning stoves) and municipal level.</p>
C189	<p>Loaded question again</p>
C191	<p>Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.</p> <p>Local councils should NOT be wasting our money on climate matters that you have no control over.</p>
C192	<p>I don't think that the objective of a carbon neutral District by 2030 is achievable.</p>
C194	<p>Major generators of carbon dioxide locally are likely to be transport, domestic heating and the council's own services. policies should attempt to reduce each of these, whilst recognising that they may also be interdependent.</p>
C195	<p>I can't see any mention of waste management and recycling?</p> <p>Our district is very poor on recycling; friends living in Salisbury can recycle food waste and all kinds of plastics where we are limited to just plastic bottles - we should be further on with this by now.</p>
C197	<p>Clarity around two things:</p> <p>How the role of major institutions (Council, Hospital, University) must lead the effort to address their footprint and therefore Climate Change?</p> <p>How economic development can help reduce climate change - specifically any existing Council housing stock, and all new Council or private housing stock</p>
C198	<p>It should pay attention to avoiding "growth" in outlying areas of Winchester, or of the District which can only encourage travel, reduce natural vegetation, impact negatively on water, increase flooding risks (even in previously dry valleys), and so on.</p>

C199	Green transport. Support for high levels of domestic insulation. Provision of allotments. Planting of far more trees and the development of wild flower areas. Improvements in public transport so as to reduce or discourage private car use. Support to local communities to save water and also to resist the paving over of front gardens.
C201	The comment has been removed as the respondent requested their response not to be published
C207	I am concerned that a strong focus on climate change will distract the council (and resources) from more pressing needs. I would be happier if it was a part of the plan, but not the main focus. At the moment it feels as though it is the main focus.
C208	There should be a presumption in favour of permitting solar energy installation. This should not be mandated at the expense of trees (i.e. WCC should not insist on solar panels on new properties with too much shade for the installation to be viable).
C214	Reduction of green house gases, exploration of alternatives to landfill
C215	Pretty simple it should be acting as only government can to coordinate our removal of Carbon emissions. This should be through planned increasing rules with associated financial support. This will inevitably lead to increased costs that individuals would otherwise be expected to 'volunteer' to pay. While there are some quite affluent people in Winchester there are also those who are not and being affluent doesn't mean that you would naturally fork out to pay.
C223	Ensuring that all development maximizes use of existing infrastructure, especially transport links Ensuring that existing settlements can be upgraded to help achieve carbon neutrality by supporting improvements in: - Communications and Mobile Phone infrastructure - Improvement of public transport - Investment in local business for both work and retail
C231	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.
C234	Traffic though national policy leading the way. Encouraging energy efficient housing Not sure how much can be done locally without national directives.
C236	Reduce carbon emissions through intelligent and sensitive development. Recognise the key role of the environment and biodiversity and therefore seek to avoid developing on greenfield land unnecessarily.

	Utilise development to rectify previous environmental damage through the prioritisation of brownfield and previously built on land.
C239	Specific policies to achieve WCC's ambition of achieving carbon neutrality by 2030
C243	Application of nationally agreed policies. Applying policies that exceed government requirements may increase financial burden of Winchester residents, but encouraging good practice, tree planting, wildlife habitats, diesel car replacement, 'keep Britain tidy' education, etc. is important.
C244	Planting of more trees, less destruction of hedgerows - tighter enforcement polices to address hedgerow removal as urgent. Reduction in traffic speeds through villages and countryside lanes . Promotion of wet lands and grasslands. Encouraging good practice and countryside code, supporting replacement of diesel car and truck engines.
C246	less reliance on car travel and only allow reuse/redevelopment of brownfield sites with no new greenfield development
C247	Focus on matters actually within the local control of the City Council
C248	It is not possible to meet the aims of Carbon neutrality by 2030 and its unrealistic to fear policies to that aim . Existing omissions on existing housing stock needs to be better addressed and a wider approach to these issues should be made rather than concentrating on a smaller area of consultation address in this plan .
C249	How to facilitate the move away from fossil fuels such as with a public network of charging points for electric vehicles how to maintain Green spaces How to keep developments 'local' but interconnected
C252	Carbon dioxide Methane Nitrogen Dioxide Particulates Removing log burning stoves. Move to veganism Recycling Renewables
C253	Promoting sustainable new developments should be the key goal of the Local Plan using brownfield sites and previous developed land, before even considering the last resort options of using greenfield sites, open countryside and outside areas dedicated to exercise and sporting facilities etc.

C255	<p>The promotion of the sustainable development of new dwellings and homes. Accordingly a major strategic objective should be to use brownfield and previously developed sites prior any consideration of new towns or the use of Greenfield sites.</p> <p>Moreover the benefits to the mental and physical health of citizens from a countryside and green landscape untarnished by over development should be recognised and acted upon especially in view of the damage caused by the global pandemics.</p> <p>Also in the post Brexit era we should be aiming for greater self-sufficiency of produce and not converting land into high carbon unsustainable large housing developments. Very important at a time of ever increasing global unrest.</p>
C256	Improved access to city for public transport
C257	The air quality in central Winchester
C260	<p>Critical to ensure no 'one size fits all' policy approach. It is about securing and supporting the delivery of sustainable development but simultaneously recognising that there will be challenges specific to each site whether associated with trying to 'retrofit' sustainability measures to an historic planning permission such as King's Barton, viability challenges, dealing with listed buildings etc. It is about a policy approach that pushes developers but one that allows flexibility and site specific issues to be taken into account.</p>
C262	Promote sustainable new development so use brownfield sites or previously developed land. Our lovely city centre could be beautifully developed for housing now that shops are not being used so much.
C274	<p>USE OF resources.</p> <p>Especially use of land already developed or Brownfield.</p> <p>Planting of the millions fo trees needed: I see no statement of the share of trees that Winchester should be aiming to plant and the susequent land mass which will be required to achieve this. Never mind the location of this land which is so far not considered.</p> <p>Preservation of presently known scare ecology such as heathland and chalk downland. Maps should all show these in the background so that proposed change of use/ developement is explicit.</p> <p>Wild life corridors and already known isolated ecosystems which should be linked.</p> <p>Future recycling systems and links to energy generation.</p> <p>Potential for self sufficiency in energy locally.</p>
C277	<p>Consider lifetime costs of a building in terms of CO2 / use of raw materials / costs to run, replace / recycle.</p> <p>Aspire to the latest BREEM codes as a minimum requirement.</p>

C278	<p>Practicality Winchester covers Inner City and Rural and farming areas. Your plan needs to have different approaches to achieve the end game in different ways.</p>
C280	<p>Flooding, Pollution / air quality. Resilience for the future</p>
C282	<p>Put the needs of the local population first ,requirements of major landowners ,developers and others including government policy second. This includes housing development, and small business sites. Ensure developments that are identified by local need have the least impact on the environment and that appropriate utility infrastructure is available together with local services Maintaining what's left of the rural nature of the area for the benefit of the population and wildlife . Instigate a local public transport infrastructure throughout the district and implement traffic calming policies in all areas both urban and rural to encourage cycling and walking.</p>
C283	<p>Quality of new &amp; refurbished building with effective insulation and use of renewable energy sources. Environmentally sensitive transport strategies Flood prevention</p>
C284	<p>Not Answered</p>
C286	<p>Climate change issues need to be addressed in the Local Plan, particularly with a view to restricting large new developments, which will smother and destabilise centres of population, such as Winchester City, villages north of Southampton eg Chandler's Ford, Hursley, Bishpops Waltham as well as villages to the north of WC eg Littleton and Micheldever. Climate change measures cannot be considered to be effective locally without reference to outside influences.</p>
C290	<p>Build new housing only on brownfield sites in our towns and cities.</p>
C291	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development. The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p>

	<p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p> <p>Ensuring that protecting the local environment is properly considered.</p> <p>Increasing resilience to climate change impacts.</p> <p>Providing for sustainable transport solutions.</p> <p>Promoting low carbon design approaches to reduce energy consumption in buildings.</p> <p>Engaging with appropriate partners to identify relevant local approaches.</p> <p>Using local risk assessments to identify those climate risks the planning system can address.</p> <p>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</p> <p>Using sustainability appraisals to test different spatial options.</p> <p>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</p> <p>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C292	<ul style="list-style-type: none"> <li>-Protecting the natural environment including keeping all forests and wild areas of scrub which support native species.</li> <li>-Protecting against future likely climate change impacts.</li> <li>-Providing sustainable transport solutions such as cycle lanes and a full bus service.</li> <li>-Promoting low carbon design solutions to reduce energy consumption in buildings.</li> <li>-Requiring that any new developments be fitted with appropriate numbers of nest boxes for birds, bats and small mammals.</li> <li>-Using local studies to predict and assess likely extreme weather events and how they can be mitigated.</li> <li>-Basing sustainable building requirements on evidence.</li> <li>-Requiring new developments to be powered by green energy, both during their building and (once completed) day-to-day running.</li> </ul>
C293	<ol style="list-style-type: none"> <li>1. Buildings (housing, public buildings and businesses) – carbon neutral new development and opportunities and incentives to decarbonise existing housing supply (including historic and listed properties)</li> <li>2. Transport – ability to connect communities through sustainable transport links and ambitious plans to radically</li> </ol>

	<p>increase infrastructure for electric vehicle charging throughout the district, especially in rural areas where car use will continue to be necessary.</p> <p>3. Nature based solutions to climate change - including tree planting and natural environment restoration and enhancement. This cannot just be delivered from biodiversity net gain through development and requires wider recognition.</p> <p>4. Business and industry – providing sufficient incentives to reduce emissions from business and attract new (carbon neutral) businesses to the district.</p>
C295	Investment is adapting how we live at the moment, infrastructure, transport, communications (mobile/broadband) to support achievement towards targeted reductions in emissions, improve air quality and help every understand the benefits of living more sustainably.
<b>C298</b>	The comment has been removed as the respondent requested their response not to be published
C304	the idea of "15 minute cities " really should help towards the goal of carbon neutrality
C305	There should be a presumption in favour of permitting solar energy installation. This should not be mandated at the expense of trees (i.e. WCC should not insist on solar panels on new properties with too much shade for the installation to be viable).
C306	Why does WCC think it can do better at Carbon Neutrality than government, or globally? Particularly when it has so little control over pollution from vehicles, and heating of older properties. This issue has overwhelmed sensible debate on the Local Plan and skewed a way forward in ensuring sustainable development. Not helpful at all in actually dealing with the problems that Winchester District has to deal with - reliance on cars, lack of affordable local buses, not everyone is able to walk and cycle!!!
C308	The focus on reducing carbon seems be be all talk. Token cycle paths/lanes prevent effective, safe cycle routes from the outskirts to the town centre and push the cyclist onto the pavements as the edges of a lot of the roads have a considerable number of potholes. This pushes people into there cars. Why doesn't all the public buildings have solar power - spend to safe and reduce reliance on carbon sourced energy.
C313	Domestic and commercial building heating.
C314	The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing

	<p>some development to meet local housing, social and community needs.          The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.          Policy should include:          Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.          Ensuring that protecting the local environment is properly considered.          Increasing resilience to climate change impacts.          Providing for sustainable transport solutions.          Promoting low carbon design approaches to reduce energy consumption in buildings.          Engaging with appropriate partners to identify relevant local approaches.          Using local risk assessments to identify those climate risks the planning system can address.          Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.          Using sustainability appraisals to test different spatial options.          Basing any local requirements for a building's sustainability on robust and credible evidence and viability.          Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C315	<p>Bargate Homes recognize the impacts of climate change. However, if the Local Plan includes a Strategic Policy on climate change, it is important that it is realistic and viable for the residential development industry in order to avoid consequential negative social and economic impacts. Page 16 of the Strategic Issues and Priorities consultation document (SIP) makes reference to "achieving the highest possible standard" to achieve the key objective of achieving carbon neutrality. However, there is little recognition of the commercial viability for the residential development industry in seeking to achieving this aim.          The result of overly ambitious targets, particularly seeking to become a carbon neutral district by 2030, are the setting of requirements and policies at a level that are likely to be too high for the residential development industry to deliver whilst remaining viable.          As set out below, Bargate Homes consider that five of the eight specific approaches are too ambitious, and we set out commentary on each below.          3. Introduce a Local Plan policy that has higher requirements than the current Building Regulations.          The proposed changes to the Building Regulations, which will come into effect from 2025, are already a step-</p>

	<p>change in themselves resulting in much more onerous requirements upon developers. As acknowledged in the SIP, the Government considers that, in the short term, the national changes to Building Regulations represent a considerable improvement in the energy efficiency standards for new homes. There is no evidence that going beyond the national 2025 Building Regulations standards is necessary to achieve an appropriate positive climate change impact.</p> <p>We are also concerned that if any alternative approach is taken at a local level in advance of 2025, there will not be enough time to put in place the significant changes that will be required, including those from Bargate Homes' supply chain.</p> <p>4. Require developers as part of the planning application process to consider the whole life carbon footprint of a building.</p> <p>The introduction of such a requirement could unnecessarily restrict trades/material availability affecting the viability of developments.</p> <p>5. Require developers to consider the impact of overheating</p> <p>Whilst this may be appropriate for some commercial developments such as offices, where measures such as green roofs could be incorporated and more easily managed in the long term, such measures are not appropriate for most medium and larger scale residential developments.</p> <p>6. Sustainable Drainage Systems (SuDS) / Rain water gardens.</p> <p>We have concerns regarding the adoption and maintenance of such features, particularly rain water gardens. As rain water gardens are likely to be located within/next to adopted highways does Hampshire County Council support such proposals?</p> <p>7. Increased water efficiency standards by using less water, storing rainwater and using it for grey water recycling. We question whether the 100 litres per person per day requirement is achievable, unless it incorporates grey water recycling. We suggest that a more effective method of reducing water consumption would be to retrofit existing properties where water efficiency measures are often of a much reduced standard, if they exist at all.</p>
C316	<p>Rewilding. Connectivity for the natural world. Encouragement of alternative ways of working, with working from home a priority to reduce traffic. Houses built with climate change in mind. Alternative method of moving goods from warehouse to shop,. Local producers encouraged to produce our food. Moving away from huge swathes of land owned by land-banking companies who do nothing with the land.</p>
C321	<ul style="list-style-type: none"> <li>- Carbon negative targets. Carbon neutral is not enough.</li> <li>- Clear-cut biodiversity targets. Read the book 'Wilding' by Isabella Tree and you will get a sense of how bad a situation we are in? How can Winchester district support local farmers to become much more environmentally</li> </ul>

	<p>friendly with their fields? How do you engage the public in biodiversity? The peregrines webcam has been a wonderful example of how this could be done, seeing how many people were lined up along the cathedral fence to watch the activity.</p> <ul style="list-style-type: none"> <li>- Become carbon-negative across Scope1, 2 and 3 emissions - not just 1 and 2.</li> <li>- Set up support programs and incentives to help every single local business to become carbon negative. Run education workshops to help businesses understand their role. Maybe set carbon emissions limits as the final hurdle to accelerate the transition.</li> <li>- Continue the work on helping homes with renewable energy incentives and insulation requirements.</li> <li>- Set up food waste collection and send all of it to an industrial composter (there's one in the New Forest that covers that area). They then sell their compost onto farmers to put back on the fields so all the precious nutrients are retained rather than ending up in landfill or an incinerator which is no use to anyone.</li> <li>- Set up glass bottle return schemes</li> <li>- Encourage local butchers and farmers to have a shop on the high street of Winchester, much like Stockbridge and Alresford to help support local communities and reduce food transport miles</li> <li>- As mentioned before, set up safe cycle routes between towns so clean commuting is encouraged. Cycling to Southampton from Winchester is one of the most terrifying experiences. I went back to commuting by car.</li> <li>- Every single event held by the council or put on by the council should be A Greener Festival certified to ensure they are hitting the greenest standards.</li> <li>- Instead of reducing waste and recycling, how about being ambitious like Vancouver and Dubai and aim for zero waste!</li> </ul>
C323	<p>Thakeham believes that a policy must set out robust requirements rather than aims or targets which do not have to be met. As a company, we are committed that all of our homes will be zero carbon in lifetime use, carbon neutral in production from 2025 and provide 20% Net Biodiversity Gain. We therefore would support a policy that requires all house builders to meet the same standards.</p> <p>With regards to question 2 below, where in our response we have selected 'Not ambitious enough', this refers to the need to set specific and measurable requirements to ensure guaranteed positive outcomes.</p>
C324	<p>Hampshire County Council declared a Climate Emergency in June 2019 setting the following two targets for Hampshire as a whole: to be Carbon neutral by 2050 and preparing to be resilient to the impacts of a 2°C temperature rise. To deliver its targets, the County Council has published a 'Hampshire County Council Climate Change Strategy 2020-2025'.</p> <p>Hampshire County Council as both landowner and service provider supports the ambition of the City Council's</p>

	<p>climate change objectives and would suggest that if the City Council were to consider the introduction of a specific design policy on climate change adaptation and mitigation, the County Council as both a public landowner and Property Services design team would support a holistic approach to design resilience in respect of climate change by encouraging the approach advocated by the RIBA 2030 Climate Challenge for the Borough Council's consideration in achieving its design in response to climate change aspirations:  <a href="https://www.architecture.com/-/media/files/Climate-action/RIBA-2030-Climate-Challenge.pdf">https://www.architecture.com/-/media/files/Climate-action/RIBA-2030-Climate-Challenge.pdf</a></p>
C326	<p>All development should be sustainable, i.e use natural, rather than processed materials. It is hard to see how there can be a balanced policy without bringing in changes to farming practices, which in itself is a can of worms. More tree planting in our city and town parks, converting parks to embrace organic policies generally all need to be increased. As mentioned, Agriculture has an important role to play. too. As oil based products become un-viable then farmers must as a matter of course resort to organic and bio-dynamic technologies. Strategic policy on climate change needs to be approached from a holistic perspective.</p>
C327	<p>Protecting the local environment, providing sustainable transport solutions, promoting low carbon design to reduce energy consumption, identify those climate risks that the planning system can address, imposing requirements for a proportion of energy used in a development to be energy from renewable resources.</p>
C331	<p>Develop housing on brownfield sites wherever possible.  Encourage renewable energy production, particularly roof solar panels on large buildings.  Ensure new housing is built to highest environmental standards - insulation, heat pumps, solar panels.</p>
C336	<p>Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.</p>
C341	<p>Minimising transport  Thermal insulation of buildings  Local access to jobs, services, shops etc  Focus on water efficiency  Increased use of modern technology to assist all of the above</p>
C342	<p>Education of the public in the need for them to get involved.  Working with all levels of education establishments, including projects to encourage children to work with their parents in reducing household carbon footprint.  Local promotion including all ways of approaching residents, eg. those without technology must not be left out.  A set of guidelines showing where carbon footprint can be reduced.</p>

	So long as ALL suggestions are incorporated to form a cohesive whole and produce a carbon neutral environment.
C343	<ul style="list-style-type: none"> <li>• inclusion of an energy hierarchy process</li> <li>• use of carbon opportunity mapping and money from the carbon offsetting fund to support energy efficiency improvements to existing buildings in the “red” or “amber” zones (based on carbon energy opportunity mapping)</li> <li>• placing carbon offsetting as a very last resort</li> <li>• introduction of “climate change intervention areas”</li> <li>• introduction of “transport emissions reduction areas”</li> <li>• requiring higher requirements than those in the current Building Regulations (subject to government policy)</li> <li>• addressing whole lifecycle carbon assessment</li> <li>• requiring proposals to consider the impact of overheating</li> <li>• promoting the use of Rainwater Gardens</li> <li>• increasing water efficiency standards</li> <li>• requiring developers to provide flexible open space where residents may grow their own food</li> <li>• reducing car use and encourage cycling and walking</li> <li>• a low-carbon and sustainable land use and management strategy</li> <li>• reducing the impact of food production and waste systems on climate and nature</li> <li>• ensuring easy access to essentials such as food</li> </ul>
C344	The comment has been removed as the respondent requested their response not to be published
C345	Everything that is done should be a step towards a net zero goal
C346	Carbon neutrality. Air pollution including particulate pollution - a Clean Air Charter. Transport - promotion of walking and cycling combined with reducing vehicle use via both incentives and disincentives.
C347	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.
C348	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.
C351	<ol style="list-style-type: none"> <li>a) Education about Climate Change &amp; what ordinary people can do about it.</li> <li>b) Reducing energy/water/plastic use.</li> <li>c) Relaxing any planning rules in Winchester which make installing external insulation on buildings expensive in</li> </ol>

	<p>residential areas. (i.e. where buildings have external walls which are not brick/cavity/brick but brick/cavity/wood so cavity wall insulation cannot be installed.)</p> <p>d) The importance of Green Belts to protect the countryside.</p>
C352	<p>It should not be too ambitious. To achieve Carbon Neutrality for the District by 2030 is unrealistic (as the majority of responders felt in the online Slido poll). It is 20 years earlier than nationally required. It doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan. It could create 'easy' but poor decision making, such as covering our countryside in wind and solar farms, to facilitate 'achievement'.</p> <p>Public transport links must be improved and made cheaper to use alongside increased e-capacity for charging privately owned vehicles.</p> <p>Increase e-charging capacity to encourage and facilitate the move away from petrol/diesel vehicles.</p> <p>More joined up cycle routes but without sacrificing necessary vehicular use of existing/planned roads.</p> <p>New homes should incorporate better building design and use of technology (solar/PV panels, Wifi, heat source pump etc), increased water efficiency.</p> <p>Rule out large scale development which is neither carbon friendly by using up greenfields, nor sustainable as it relies on the use of private cars – 'if you make people drive, you make them have a high carbon footprint'.</p> <p>Energy efficient building.</p> <p>Establishing more open spaces/ tree planting.</p>
C353	<p>Key points:</p> <ol style="list-style-type: none"> <li>1. The focus on better quality housing development is essential and very welcome - LOTS needs to happen if we are to move towards high-quality, landscape -led development (in Winchester, more like Winchester Village than Barton Farm, in a nutshell).</li> <li>2. Intensive agriculture on thin chalk soils across the district is a massive climate change problem, far bigger in truth than housing development. WCC should lobby / actively influence HCC to convert all its county estates in the district to environmental agriculture practices that sequester carbon (there are payments for this) and promote biodiversity.</li> </ol>
C356	<ol style="list-style-type: none"> <li>1. Identify where and how you can use local sequestration.</li> <li>2. Announce how you will reduce the carbon footprint of the Council and related organisations.</li> <li>3. Relate the local infrastructure and central development to a realistic timetable and targets.</li> <li>4. Do not just produce headline numbers and targets without understanding what they mean in reality. They might</li> </ol>

	boost your egos but they will undoubtedly make you look foolish - this is a very difficult topic for amateur politicians.
C357	<p>As a result of promoting a strategy to focus on climate change initiatives the South Wonston Parish Council is pleased to say that when considering the points raised in the survey it can record an an exemplary record which could be used in developing the wide Strategic policy</p> <p>Local communities need to have the ability to self-organise; a wide range of voices that focusses on problem-solving; listening to people; focus on walking and cycling.</p> <p>For example since 1989 the Parish Council has conducted three major surveys and a couple of single subject questionnaires, with an average response from over 70% of the households.</p> <p>As a result, the Parish Council has followed up many requests culminating in the building of an award-winning Pavilion that uses not only grey water for its toilets but ground source for its heating. In addition, a fair number of the houses in the village have installed solar panels. These actions exhibit an interest in, and support for, actions leading to Carbon Neutrality and a Low Carbon Infrastructure and it is the intention of the Parish Council to continue to consult with the residents over future actions in this field with preparations underway.</p> <p>Finally, part of the Worthy Down Camp is in our Parish and liaison is in place to examine where we might combine our efforts, knowing that the Camp itself is also exploring ways to reduce its own Carbon footprint.</p> <p>It is to be hoped, therefore, that before the year is out, subject to conditions allowing, that as many villagers who wish to participate will be involved in this aspect of concern, and that there will be something to report. It is not any unwillingness of the Parish Council to contribute to this aspect of the Survey but the lack of opportunity of which we are all aware.</p>
C360	While the aim of carbon neutrality by 2030 is commendable this chosen date should not be allowed to trump the need to retain the many historic buildings and dwellings which may be very difficult to provide carbon-neutrality while retaining their essential character
C361	<p>The objective of a carbon neutral district by 2030 is not achievable via the Local Plan, given that there are significant sources of carbon emissions within the district over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would adversely impact on delivery of open space, affordable housing and contribution to infrastructure.</p>

	Policy should include addressing the impact of climate change in a realistic and proportional way and in a realistic timescale and providing for sustainable transport solutions.
C363	Good local public transport. For example, Oliver's Battery used to have a bus service but that no longer exists so people use their cars instead. It would be so much better for the environment if this were not the case. More housing developments mean more cars. We need to re-wild some of the countryside, not build over it. Plant more trees, use fewer pesticides.
C364	Development of brownfield sites
C365	<p>It needs to state what current emissions are and what activities produce them (BEIS territorial figures should be sufficient, but CSE data at <a href="https://impact-tool.org.uk/">https://impact-tool.org.uk/</a> could complement those). It needs to say that by 2030 Winchester City Council is committed to reducing all emissions in the district to zero, and it needs to say unequivocally which linked emissions the local plan will be able to reduce. The reduction required could then be distributed across the policy headings (objectives?), identifying how much reduction will be required under each objective.</p> <p>Transport, and domestic energy use are the main categories of emission, so the local plan needs to emphasise the need for change in these. Industrial emissions are significant too.</p> <p>This implies a complete replacement of transport technologies and a major change in the share carried by each transport mode, fundamental improvement in the quality of buildings to achieve zero emissions, major increases in land allocated to the production of renewable energy, a transformation in the mix of natural habitats, and a revolution in farming techniques. Because new developments are only a minor element in the total of everything that happens in the district, the requirements in the local plan for the standards of new developments will need to be extremely stringent to compensate for inertia elsewhere. The local plan needs to seek both to maximise the contribution of new developments and transform the performance of existing infrastructure.</p> <p>Goods distribution will have to be completely rethought, consumer habits challenged, and systems of processing/reusing waste totally re-designed.</p>
C371	<p>Better recycling (weekly collections with more items able to be recycled).</p> <p>More safe cycle paths.</p> <p>More electric charging points throughout the city.</p> <p>More parks and planted green spaces for bees and wildlife in general, including flowers planted on top of bus shelters for bees.</p> <p>Ban diesel and petrol cars from the city centre.</p>

C372	<p>Policy should cover the following:  Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.  The value of the existing open spaces, countryside and natural environment surrounding our city on our health, well being and contribution to carbon neutrality.  Ensuring that protecting the natural environment is properly considered.  Increasing resilience to climate change impacts.  Providing for sustainable transport solutions.  Mandating low carbon design approaches to reduce energy consumption in buildings.  Engaging with appropriate partners to identify relevant local approaches.  Using local risk assessments to identify those climate risks the planning system can address.  Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.  Using sustainability appraisals to test different spatial options.  Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C376	<p>Reduction in car use by encouraging walking, cycling &amp; use of public transport.  Encouraging the widespread use of renewable energy.  Not allowing building on floodplains. These should be re-wilded as marshland to act as water soaks to prevent flooding and encourage wildlife.  Natural re-wilding green spaces as this is more efficient in reducing carbon than wholesale tree planting</p>
C378	<p>WCC declaring a 'so called' climate emergency is a pathetic, childish gesture which is typical of the parish council caliber party Councillors that is now in the majority.</p>
C379	<p>New build development - housing and commercial - to require solar panels on rooftops.  More encouragement for existing housing and commercial properties to invest in solar panels.  Electric vehicles will inevitably become the norm. Investment in charging facilities is essential and urgent with ideas such as kerbside charging points for on-road parking. Parking permits for individual residences with no off-road parking may be inevitable.</p>

C382	<p>Development of housing that is truly sustainable and seeks to use brownfield sites or land that has already been developed. I would also like to see former retail outlets in Winchester converted into housing. I would not support building on greenfield sites or the development of new towns. Apart from conflicting with the laudable aims of Conservation, Biodiversity and the Natural Environment it would generate a huge increase in car use with all the attendant downsides.</p>
C383	<p>A strategic policy on climate change should focus on a move away from reliance upon the private car through the creation of walkable neighbourhoods and improved public transport links, which allow easy access to jobs and local services. The policy should require homes to be energy efficient and designed to be able to adapt to the changing needs of home owners and tenants.</p>
C385	<p>How do you achieve carbon neutrality with an historic environment and many buildings in conservation zones or the South Downs national park ? Do we need more skilled contractors who can cover both areas, achieving energy efficiency whilst keeping buildings in keeping with the area, yet not at enormous cost? New builds, sure should be as carbon neutral as is possible, but will need massive buy in from developers whose main aim will be profit - how do we balance this? Will WCC/HCC/Sth Downs National park all only work with/ allow developments by those who commit to these terms, and what happens when corners are cut to cut costs? How do you enforce compliance?</p>
C386	<p>Consider lifetime and environmental costs of a building in terms of CO2 / use of local raw materials / costs to run, replace / recycle. Aspire to the latest BREEM codes as a minimum requirement.</p>
C387	<p>The comment has been removed as the respondent requested their response not to be published</p>
C388	<ol style="list-style-type: none"> <li>1. Make all public buildings carbon neutral (sustainable energy use, energy conservation measures, mandatory insulation etc)</li> <li>2. All new developments must be carbon-neutral to gain approval</li> <li>3. Transport - eg electric/hydrogen buses</li> <li>4. Massively invest in the best possible recycling facilities. The low level of plastic recycling in Hampshire is unacceptable; I understand most is incinerated, and even if this does produce some energy it is such a second best option to proper recycling which reduces the need to produce yet more plastic</li> </ol>
C392	<p>Key goal should be sustainable new development so this means brownfield and previously used sites before even thinking about using greenfield sites</p>

C394	<p>Policies to make existing housing stock carbon-neutral by through better insulation, replacement of fossil fuel heating systems and installation of grey water systems.</p> <p>Policies to improve local transport options to minimise car use.</p> <p>Policies to make key facilities accessible by walking and cycling.</p>
C397	<p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p> <p>Ensuring that protecting the local environment is properly considered.</p> <p>Increasing resilience to climate change impacts.</p> <p>Providing for sustainable transport solutions.</p> <p>Promoting low carbon design approaches to reduce energy consumption in buildings.</p> <p>Engaging with appropriate partners to identify relevant local approaches.</p> <p>Using local risk assessments to identify those climate risks the planning system can address.</p> <p>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</p> <p>Using sustainability appraisals to test different spatial options.</p> <p>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</p> <p>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C398	<p>maintaining access to open farm land / green fields - supporting delivery of locally grown food (reducing food miles),</p> <p>flood fields (reducing the risks of flooding without the need to develop enormous infrastructure developments),</p> <p>carbon absorption through the crops,</p> <p>access to local recreational ground - for walkers / cyclists / children,</p> <p>concentration of new housing developments on brown field sites - reducing the spread of the local town foot print,</p> <p>developing housing which is close to all existing amenities / reducing pressure on existing infrastructure (eg the development of the 5 new houses on the site of the previous single house on Oliver's Battery Road North does not put undue pressure on local roads, schools, hospitals etc - but makes much better use of an already developed areas)</p>
C399	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development.</p> <p>The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there</p>

	<p>are significant sources of carbon emissions within the District over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p> <p>Ensuring that protecting the local environment is properly considered.</p> <p>Increasing resilience to climate change impacts.</p> <p>Providing for sustainable transport solutions.</p> <p>Promoting low carbon design approaches to reduce energy consumption in buildings.</p> <p>Engaging with appropriate partners to identify relevant local approaches.</p> <p>Using local risk assessments to identify those climate risks the planning system can address.</p> <p>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</p> <p>Using sustainability appraisals to test different spatial options.</p> <p>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</p> <p>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C400	<p>An "Emergency" is not an "Ambition", By definition, it requires "Immediate Action" (Oxford Dictionary). I have submitted, separately, proposals to Councillors.</p>
C404	<p>The objective of carbon neutral district doesnt seem achievable by 2030. As there are existing factors for which you have no control over.</p>
C406	<p>Keeping the green spaces untouched Making sure that developers aren't providing low quality mass produced housing</p>
C407	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development.</p> <p>The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. To place</p>

	<p>achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p> <p>Ensuring that protecting the local environment is properly considered.</p> <p>Increasing resilience to climate change impacts.</p> <p>Providing for sustainable transport solutions.</p> <p>Promoting low carbon design approaches to reduce energy consumption in buildings.</p> <p>Engaging with appropriate partners to identify relevant local approaches.</p> <p>Using local risk assessments to identify those climate risks the planning system can address.</p> <p>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</p> <p>Using sustainability appraisals to test different spatial options.</p> <p>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</p> <p>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C408	<p>The Local Plan needs to address numerous issues if it to support WCC being carbon neutral by 2030. But becoming carbon neutral may in itself lead to actions which undermine other sustainable development objectives. So the policy should be multi faceted and take account of this.</p>
C409	<p>Respect for our green spaces, good &amp; affordable public transport, robust planning to prevent over development &amp; positive Council-supportive local initiatives. Future concerns such as the Royaldown proposal need to be recognised for their negative impact on flooding &amp; increased road traffic.</p>
C413	<p>Reducing CO2 emissions as much as possible. Encouraging electric vehicles and providing charging points.</p>
C416	<p>We have to reduce our use of plastic. But Covid has shown we can use and throw away as much as we like. Can't see that helps anyone. People need to be encouraged to work locally and avoid commuting.</p>
C419	<p>The comment has been removed as the respondent requested their response not to be published</p>

C425	One issue which attracts relatively little attention but which is very close to my own particular concerns is the difficulty of improving the energy efficiency of old listed buildings.
C428	Reduction of carbon emissions through sensitive development. Importance of environmental and biodiversity by avoiding developing on greenfield land where possible. Where possible rectifying previous environmental damage by prioritising brownfield and previously built on land.
C429	Carbon Neutrality 4 questions Q1. The biggest issue is the embodied carbon in new developments. 50tCO2 for each new house plus another 50tCO2 for associated roads and infrastructure, before anybody even moves in. So the more that new development can be accommodated on brownfield urban sites the better, as that minimises the need for new infrastructure at least. And of course, reduces car dependency, the other large source of carbon and other emissions. The biggest impact of local polices according to a study by Cool Climate Network, University of Berkeley in reducing greenhouse gas emissions is by urban infill, significantly above all other measures.
C436	We must generate more renewable energy in the district. We must stop demolishing buildings to rebuild - we need an end to building works except where they make existing buildings suitable for new uses or to reduce their carbon footprint. We must stop "balancing" climate against the economy. The economy will collapse unless we stop climate change. Tacking the climate emergency is the only way to save jobs and the economy. The Council must do everything it has the legal powers to do to ensure that all new hosing and other building meets zero carbon standards.
C437	This should cover more people being able to use solar panels and have more electric charging points to use. It should also look at places where people break the law and live in caravans. There are too many of these in the area and cause lots of problems with sewage and drainage. It has been known for them to just take electricity from illegal sources and also dig wells for water straight from the ground. There should be more emphasis on planting trees and providing better natural development when housing is planned so that trees and natural environments are not destroyed. Street lighting should fit with the dark skies and not pollute the natural environment.
C439	You should not be too ambitious. Why do we need to achieve District Carbon Neutrality by 2030 - who determined this date? This is unrealistic (as majority of responders felt in the online Slido poll). It is 20 years earlier than nationally required. It doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan. It will not allow sufficient time for considered thought and could create 'easy'

	but poor decision making, such as covering our countryside in wind and solar farms, to facilitate 'achievement'. More sustainable local and smaller development is the key. Rule out large scale development which is neither carbon friendly by using up greenfields, nor sustainable as it relies on the use of private cars – 'if you make people drive, you make them have a high carbon footprint'.
C441	Reducing traffic in the city centre and providing affordable, renewable energy for all.
C448	The comment has been removed as the respondent requested their response not to be published
C452	Getting cars out of Winchester Not just creating cycle friendly routes in Winchester but in to Winchester. No point having a lovely cycle friendly City if it's too dangerous to cycle your bike from outlying villages into Winchester.
C453	<ol style="list-style-type: none"> <li>1. Public transport, funded and frequent enough to reduce car traffic and close central car parks</li> <li>2. Domestic heating and insulation - installation of heat pumps, solar, local heat and power generation plus strict energy and insulation requirements for all developers/builders and house-owners' planning applications (which doubtless needs a national strategy with legislation, councils can't do it on their own)</li> <li>3. Congestion/emissions charging for non-electric vehicles to drive into key areas to bring down carbon and nitrous pollution</li> <li>4. Upgraded recycling contracts to deal with most plastics and metals</li> </ol>
C457	Reduce carbon emissions through more sustainable :- Transport Waste Energy Procurement Green spaces Planning Influence
C461	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use of greenfield sites.
C462	The chapter in the consultation document on this issue covers all the relevant aspects of a climate change policy except transport which needs to be included.
C464	The key goal of the Local Plan should be to promote sustainable new development, so a key strategic policy should be to use previously developed land or brownfield sites before any consideration of new towns or the use

	<p>of greenfield sites.                  Also developers should be required to make their sites fully sustainable/ as carbon neutral as possible - on site.                  The must also address other environmental issues like water run-off – require paving and drives to prevent water runoff etc.</p>
C470	<p>Maintaining County Farms Estate, Hampshire County Council land for farm land use and not development as farmers are custodians of our environment and in so doing helping to get the UK to net zero emissions.                  Supporting farming in our country helps to reduce food miles in reduction of importing food that we can produce ourselves with a reduction in food miles and therefore carbon footprint.</p>
C471	<p>A key strategic policy should be to use previously developed land or brown field sites before any consideration of new towns or the use of green field sites. Not all so called brown field sites however should be used without careful consideration. For example the development on Bushfield camp should be reconsidered as it provides biodiversity and space for local people to breathe and enjoy the outdoors.</p>
C472	<p>It needs to be explicit that major changes are needed to the way we live. We need to consume less as well as greener energy, reduce food waste and reduce journeys etc. We have had massive upheaval with COVID and people need to realise we need to accept big upheavals here too.                  All new development must be in areas where there is minimal need for people to travel and if they do, have public transport available.                  Reusing brown field sites as well as redeveloping unused buildings etc must be prioritised.                  Rules needed for all development in terms of energy efficiency and green energy generation.</p>
C477	<p>Not sure</p>
C478	<p>Green belt and preventing a loss of biodiversity through expansion of housing outside the city or on existing green spaces like farms, golf courses or fields                  Population growth / housing growth                  Water (keeping it in the chalk streams for biodiversity)                  Healthy soil                  Clean air                  Plant more trees                  Make local spaces more rich in biodiversity</p>
C480	<ul style="list-style-type: none"> <li>- Support local food producers and make it easier for the population to access locally grown food as well as growing their own.</li> <li>- Create more cycling paths in an intelligent and balanced way (favouring solutions that will make people want to</li> </ul>

	<p>cycle and feel safe doing it, rather than making it more difficult to drive for those who cannot avoid it); offer cycling lessons; ensure easy access to bicycle repair services; and create and publicise a code to foster good behaviour and mutual respect between cyclists, pedestrians and other road users.</p> <ul style="list-style-type: none"> <li>- Adopt state-of-the-art practices in upgrading our historic buildings to make them environmentally-friendly and resilient against the effects of climate change.</li> <li>- Set the bar higher than the minimum required by the building regulations for new homes and consider the long-term impact of every new construction project.</li> <li>- Consider the ratio between spaces that are built on and gardens, from the perspectives of flooding risk and the ability of individuals to grow their own food, support biodiversity, and enjoy and learn to care for their immediate environment.</li> <li>- Offer easily accessible opportunities to learn about simple actions individuals can take to mitigate and adapt to climate change.</li> <li>- Favour measures that would make regular working from home a more natural option for anyone whose job does not require full-time presence at the office and make sure the homeworking genuinely contributes to the mitigation of climate change and not the opposite.</li> </ul>
C482	<p>It should seamlessly link to the County and Government plan. This should not be a go it alone strategy.</p>
C483	<p>To accord with the vision for more walkable cities/neighbourhoods a strategic policy on climate change should focus on reducing the need to travel with development close to existing centres and services supported. Medium to large scale housing developments in sustainable locations assist in the creation of walkable neighbourhoods, increase the use of existing facilities and services retaining their viability and vitality, provide access to jobs and public transport links. Which, in combination, reduce reliance on the private car and address the impact of carbon emissions on the environment.</p> <p>Savills, on behalf of Buckland Development Ltd are in general support of the Council's approach to Carbon Neutrality and recognise the importance of policies aimed at addressing climate change. Land West of London Road, Purbrook is well placed to deliver a sustainable development that assists in meeting the ambitions of the Carbon Neutrality Action Plan.</p> <p>Winchester City Council is already aiming ahead of the Government target of 2050 and emerging policies are ambitious.</p> <p>It is considered that the proposals will need to be supported by further technical evidence to support the approach and demonstrate appropriate viability for new developments to achieve additional requirements and/or contribute</p>

	to a carbon offsetting fund. Buckland Development Ltd reserve the right to comment on Carbon Neutrality in further detail upon review of further evidence.
C485	ADEQUATE SUBSIDIES FOR HOUSING ENERGY EFFICIENCY CHANGES/ CAR UPGRADES
C487	Promoting sustainable new developments should be the key goal of the Local Plan using brownfield sites and previous developed land, before even considering the last resort options of using greenfield sites, open countryside and outside areas dedicated to exercise and sporting facilities etc.
C489	Flooding. Impact already seen in countless villages and in winchester city itself...
C493	Because a very high source of carbon emissions come from all buildings and households, a clear element should be a very high standard of insulation and on a very micro scale, an energy efficient way of drying clothes. Apart from highly inefficient electric tumble driers, no thought is given to this in modern house design.
C494	If there is a clear direction on sustainability then there will be a clear direction on climate change policy
C497	A key strategic policy should be to use previously developed land or brownfield sites avoiding new towns or the use of greenfield sites. Greening existing infrastructure and focussing on making the most of already dense areas, much of which is struggling or not maximising its current use, rather than promoting urban sprawl and increasing traffic/pollution and loss of green spaces.
C498	Ban on electric vehicles until an efficient power source is identified. Small Cars / Buses / Trucks Electric vehicles are significantly less efficient than other vehicles of this size and burn more energy both throughout their lifecycle and in use too. This is FACT but the information is not provided to the public nor understood by public sector. Equally suggesting Carbon Neutrality by using Carbon Banks is also a falsehood. However Carbon reduction schemes and approaches should be proposed and supported except through grants and subsidies as these suggest a economic benefit which does not exist.
C500	Don't know.
C501	emissions, active travel and.ensuring the infrastructure needed is.built when new communities are built
C502	Transport Out door bbqs chimeras fires
C509	- encouragement of less car usage - movement of car parks to park /ride or park/stride model - overarching road network plan that avoids closing or narrowing one road without adjusting road network elsewhere to avoid congestion/higher air pollution

	<ul style="list-style-type: none"> <li>- safer cycling network</li> <li>- partnership with local businesses to introduce climate friendly initiatives</li> <li>- home recycling opportunities</li> <li>- local taxing/charging for polluting activity</li> <li>- exemptions/support for lower income earners to help with climate change changes</li> </ul>
C511	New buildings should be built to Passivhaus standards and refurbishments should greatly exceed Building Regulations requirements. Focus on saving energy first before covering green fields with solar farms
C513	<p>The key issues as I see it are as follows-</p> <ol style="list-style-type: none"> <li>1. Ensuring that protecting the local environment is properly considered.</li> <li>2. Providing for sustainable transport solutions.</li> <li>3. Promoting low carbon design approaches to reduce energy consumption in buildings. Ensure that new buildings are built to a good standard using the best carbon neutral techniques.</li> </ol>
C514	Stop encouraging a rise in the local population.
C515	<p>Welbeck supports the Council's Carbon Neutrality Action Plan and commends the Council for setting ambitious targets for carbon neutrality by 2024 and 2030 respectively.</p> <p>Being contiguous with Denmead, Mount Edgecombe Farm has the capacity to deliver upon a large number of the Council's Local Plan Objectives, not least amongst them being the overarching ambition to become carbon neutral by 2030. As detailed in the Carbon Neutrality Action Plan, the largest contributor to the District's carbon emissions is from Transport (287,000 tonnes). The second largest contributor is domestic energy (193,000 tonnes). Suitably located developments in sustainable locations such as Mount Edgecombe allow for the creation of walkable neighborhoods, provide easy access to jobs and public transport links and engender a move away from the reliance upon the private car. In coordination with the emerging local Plan there is the opportunity tackle climate change at Mount Edgecombe by embedding improved housing efficiency standards into the emerging masterplan.</p>
C516	<p>Add "Access to Good Food for all, ensuring that everyone has access to healthy, nutritious, affordable and ethically sourced food."</p> <p>Change "larger "to "all" developments (housing and non-housing) having to consider where and how they incorporate food growing spaces</p>
C517	Limit the destruction of areas that are important to wildlife and concentrate on development of brownfield sites. Development of areas should limit the effect of increasing pollution.
C522	<p>New homes delivered where there is employment therefore reducing car usage.</p> <p>Deliver more park and ride schemes to keep cars out of the city centre.</p>

C523	This is madness. Any attempts by Winchester to combat climate change are futile. There should be no strategic Policy on climate other than adaptation to a naturally changing climate, if necessary. As we are entering a period of low solar activity it is likely we will be suffering from extremely cold temperatures, regardless of how much CO2 humans emit.
C528	The Policy should recognise that the viability of development should also be given very careful consideration as otherwise a well meaning policy could unintentionally create barriers to new investment and place unreasonable burdens on development making them unviable.
C530	Reduced dependence of private car use and encouragement of alternatives. Use of low/zero carbon heating systems and improved insulation.
C532	In the UK over 30% of greenhouse gas emissions come from the food system (Food climate research network) Food is one of the largest contributors of greenhouse gas emissions from human activities, second only to transportation so should be more explicitly included as a strategic policy.
C535	Winchester Food Partnership supports a Strategic Policy but believe that it is vital to include food - sustainable production (commercial and community), transport links, local retail and easy access:- 1. Add "Access to Good Food for all, ensuring that everyone has access to healthy, nutritious, affordable and ethically sourced food." 2. Change "larger "to "all" developments (housing and non-housing) having to consider where and how they incorporate food growing spaces Key to this policy should be:- 1. Reduction of the climate and nature impact of the local food system 2. Land use and management strategy 3. Incorporation of the food waste hierarchy, including redistribution of surplus food
C538	reducing emissions from transport and heating. support a better public transport system, and support electric charging from renewable energy sources. Also support replacement of inefficient oil and LPG boilers in the towns and villages not serviced by gas with renewable air source and ground source heating systems
C539	I believe that it is not sensible to make each individual district strive for carbon neutrality. That ambition is best satisfied that the national and international level and will distort development in the area towards unsuitable development options.
C540	Any Strategic Policy on climate change should be realistic and viable for the housing development industry in order to avoid consequential negative social and economic impacts. Page 16 of the Strategic Issues and

	<p>Priorities consultation document (SIP) makes reference to "achieving the highest possible standard" to achieve the key objective of achieving carbon neutrality. There is a significant risk that, in seeking to meet the aspiration to become a carbon neutral district by 2030 , overly ambitious targets are set, resulting in overly onerous policy requirements which could compromise the "deliverability" of residential development.</p> <p>As set out below, TWSL consider that five of the eight specific proposals are too ambitious for the reasons set out:</p> <p>3. Introduce a Local Plan policy that has higher requirements than the current Building Regulations: The proposed changes to the Building Regulations, which will come into effect from 2025, are already a step-change in themselves resulting in much more onerous requirements upon developers. As acknowledged in the SIP, the Government considers that, in the short term, the national changes to Building Regulations represent a considerable improvement in the energy efficiency standards for new homes. There is no evidence that going beyond the national 2025 Building Regulations standards is necessary to achieve an appropriate positive climate change impact. We are also concerned that if any alternative, non-standard approach is taken at a local level in advance of 2025, this will bring additional costs to the house building industry, making it more costly to develop in Winchester's district than in nearby authority areas, potentially negatively affecting the Council's ability to maintain a 5 year housing land supply. In addition there is also a greater risk that if a Local Plan uses a bespoke policy with different requirements this will become out of date.</p> <p>4. Require developers as part of the planning application process to consider the whole life carbon footprint of a building - It is not clear what "considering" the whole life carbon footprint of a development will involve. Requirements must be specific and quantifiable so that their cost can be measured.</p> <p>5. Require developers to consider the impact of overheating - Again, it is not clear what "considering" the impact of overheating of a development will involve. Requirements must be specific and quantifiable so that their cost can be measured.</p> <p>Whilst this may be appropriate for some commercial developments such as offices, where measures such as green roofs could be incorporated and more easily managed in the long term, such measures are not appropriate for most residential developments.</p> <p>6. Sustainable Drainage Systems (SuDS) / Rain water gardens - We have concerns regarding the adoption and maintenance of such features, particularly rain water gardens. As rain water gardens are likely to be located within/next to adopted highways does Hampshire County Council support such proposals?</p> <p>7. Increased water efficiency standards by using less water, storing rainwater and using it for grey water recycling - Whilst we support the principle of this we question whether the 100 litres per person per day requirement is achievable, unless it incorporates grey water recycling. We suggest that a more effective method of reducing</p>
--	---

	<p>water consumption would be to retrofit existing properties where water efficiency measures are often of a much reduced standard, if they exist at all.</p>
C542	<p>As noted earlier, the council needs to define specifically what is and is not included in its carbon neutrality objective. The council should also specify what it means by "climate emergence" and specifically how this impacts the area. Too many councils use these terms for meaningless virtue-signalling - local residents and voters are not interested in soundbites, they are interested in genuine sustainability which is unlikely to be achieved in the 2024/30 timescale (ie including embodied and supply chain emissions).</p> <p>Climate goals need to be realistic and should not create hardships for local residents or make businesses uncompetitive: de-carbonisation by 2050 will cost the UK £ trillions (according to HM Treasury estimates), so the costs of any acceleration of these aims need to be properly taken into account.</p> <p>The key aspects of the policy should be</p> <ol style="list-style-type: none"> <li>1. Minimise physical waste and energy waste across all council-owned properties and activities;</li> <li>2. Encourage homes and businesses in the area to also minimise physical waste and energy waste;</li> <li>3. Ensure the fleet of council vehicles use low carbon technologies such as biofuels and EVs - build suitable infrastructure such as solar-powered charging facilities at council-owned car parks;</li> <li>4. Ensure new buildings meet new local building construction criteria which include energy efficiency standards (not EPC-based) that require specific, MEASURED, heat loss standards to be met, and including standards on embodied and life-cycle emissions;</li> <li>5. Promote the use of sensitive renewable generation that sits appropriately within the environment, avoiding the development of greenfield sites, and protecting biodiversity;</li> <li>6. Develop low-carbon local infrastructure, including EV charging, public transport and digital infrastructure (that reduces the need for physical travel);</li> <li>7. Ensure that the needs of vulnerable consumers are met at every stage of the Strategic Policy.</li> </ol>
C543	<p>That the actual issues be addressed locally not not be allowed to resort to some form of "off-setting".</p>
C548	<p>Strong policies are required to achieve carbon neutrality by 2030.</p>
C549	<p>Focus upon local, not whole district or wider geographical, community needs.          Localised self-sufficiency - building by building. Choice, education and support for consumers.          A wide range of technologies - not just solar and wind.          Embracing new technological developments.</p>

	<p>Avoiding destruction of local green and heritage assets.                  Natural carbon capture.                  Energy efficiency.                  Sustainable agriculture.                  Protecting our watercourses.</p>
C550	<p>Zero Carbon by 2030                  Roadmap gradual improvements over life of Plan                  Making key urban design moves now - efficient form / orientation / green infrastructure and ecology meaning to a wider strategy not just site-by-site?                  Promote benefits of re-use / Permitted Development rights for deep retrofit                  Delivery - ensuring that policies can be delivered and that developers are incentivised</p>
C554	<p>There is no opportunity here to question the Strategic Policy you seem to have already decided on with the 2024 or 2030 dates. So I question all options below in that you are being overly-ambitious. The Key issue is to comply with the Government requirement for 2050 date.</p>
C555	<p>Water, Public Transport, Preserving green and wild spaces.</p>
C556	<p>Traffic pollution. The city Centre is too full of pollution. Park and ride is a good option but just isolated pollution to other pockets of the city</p>
C557	<p>Providing local access to jobs, shops and services;                  minimising car travel and the need to travel.                  improving energy efficiency</p>
C559	<p>Carbon neutrality is an important objective, but the current planning system, as described by the NPPF, does not provide for this to be an overarching objective. There is a risk that the plan will not deliver the necessary development, or it may make development non-viable. Hence carbon neutrality as a single overarching objective is a high risk strategy for the local plan, somewhat out of step with Government policy, and therefore at risk of being found to be unsound. It may be possible to achieve the same objective, but in a different or more balanced way alongside the growth requirements for the plan.</p>
C560	<p>Consider district power and heating</p>
C561	<p>Existing dwellings - Insulation, double glazing, gas heating etc.                  People's need to travel to work - don't assume that everyone can or wants to work from home                  Provision of carbon neutral electricity generation</p>
C563	<p>Carbon neutrality and taxation.</p>

C566	Cycling needs to be separated from motorised transport so that long queues of vehicles are not crawling up hills behind one bike with all the emissions and extra fuel consumption that entails.
C567	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development.</p> <p>The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <ul style="list-style-type: none"> <li>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</li> <li>Ensuring that protecting the local environment is properly considered.</li> <li>Increasing resilience to climate change impacts.</li> <li>Providing for sustainable transport solutions.</li> <li>Promoting low carbon design approaches to reduce energy consumption in buildings.</li> <li>Engaging with appropriate partners to identify relevant local approaches.</li> <li>Using local risk assessments to identify those climate risks the planning system can address.</li> <li>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</li> <li>Using sustainability appraisals to test different spatial options.</li> <li>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</li> <li>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</li> </ul>
C568	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development.</p> <p>The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. 	<p>delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p> <p>Ensuring that protecting the local environment is properly considered.</p> <p>Increasing resilience to climate change impacts.</p> <p>Providing for sustainable transport solutions.</p> <p>Promoting low carbon design approaches to reduce energy consumption in buildings.</p> <p>Engaging with appropriate partners to identify relevant local approaches.</p> <p>Using local risk assessments to identify those climate risks the planning system can address.</p> <p>Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.</p> <p>Using sustainability appraisals to test different spatial options.</p> <p>Basing any local requirements for a building's sustainability on robust and credible evidence and viability.</p> <p>Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C569	<p>The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development.</p> <p>The objective of a carbon neutral District by 2030 is unlikely to be achievable via the Local Plan, given that there are significant sources of carbon emissions within the District over which the local plan has no control. To place achieving carbon neutrality by 2030 as the overarching objective may lead to decisions which undermine the delivery of the other elements of sustainable development, for example supporting rural communities by allowing some development to meet local housing, social and community needs.</p> <p>The cost of achieving a carbon neutral development is not insignificant and would need to be factored into the overall cost of delivering a scheme and the higher costs would impact on delivery of open space, affordable housing and contribution to infrastructure.</p> <p>Policy should include:</p> <p>Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale.</p>

	<p>Ensuring that protecting the local environment is properly considered.          Increasing resilience to climate change impacts.          Providing for sustainable transport solutions.          Promoting low carbon design approaches to reduce energy consumption in buildings.          Engaging with appropriate partners to identify relevant local approaches.          Using local risk assessments to identify those climate risks the planning system can address.          Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.          Using sustainability appraisals to test different spatial options.          Basing any local requirements for a building's sustainability on robust and credible evidence and viability.          Imposing reasonable requirements for a proportion of energy used in development in their area to be energy from renewable sources and/or to be low carbon energy from sources in the locality of the development.</p>
C570	<p>Every aspect of life in the city needs to be revisited in pursuit of carbon-neutrality, but most especially:          Transport: Facilitate active travel, by investing in high-quality infrastructure for cycling and walking; limiting private motor vehicle access to the city centre, e.g. by bus gates.          Waste Management: Promote reuse and avoidance of waste at the householder and business level. Interventions where possible to increase recycling.          Sustainable Development: Setting the highest standards to ensure that new build and renovation results in properties that are inherently low-carbon to heat and occupy. Ensure that housing developments support low-carbon living, e.g. by permeability to facilitate walking/cycling to local amenities, making car-free living feasible.          It goes without saying that the city's own operations should be conducted with low-carbon as a major driver.</p>
C574	<p>All new buildings should have:-          - Solar panels on the roofs and if possible on the south facing walls - prime agricultural land should not be used for solar since that simply exports the CO2 emissions of food production.          - Rain water collection should be built in to all new buildings for use in WCs          - Water power should be harnessed along the Itchen and in the Solent (tidal)          - Public transport should be improved and small buses go more frequently, dial-a-ride should be available for all. Soon it will be possible to have an App so book transport shared with others.          - Supermarket deliveries should be rationalised, e.g different villages get deliveries on different days          - Car park charges should be raised so that going into Winchester by bus is much cheaper than driving</p>
C576	<p>not have pie in the sky - be strictly practical</p>

C578	<p>Reduce car use and encourage cycling and walking.</p> <p>We agree with the carbon neutral targets for 2024 and 2030 for the city and district respectively but think that the specific measures in the Plan below aren't sufficiently ambitious to meet those goals.</p>
C580	<p>Issue 1 carbon neutrality</p> <p>We support this objective, and the summary of the energy hierarchy is useful as is the summary of Possible measures. We would make two points.</p> <p>Firstly we would have concerns about admitting the possibility that failure to achieve targets towards carbon neutrality in new development should be condoned by allowing contributions to a carbon offsetting fund in lieu of adequate performance. Carbon offsetting will not of itself be a way to achieve carbon neutrality. Equally, it will be essential to tackle the efficiency of our existing housing stock which will remain much the significant users of energy. However it will be dangerous to allow for the funding of a climate change intervention scheme to become dependent on the waste product of the failure of new development to measure up to the highest achievable standards, which is what a carbon offsetting fund will be.</p> <p>To achieve the goal of carbon neutrality, we suggest that all new development will have to be designed to the highest standards AND there will have to be an adequate fund to provide upgrading measures for existing stock.</p> <p>Secondly there are deliverability issues regarding the suggestion that WCC adopt a higher performance standard than the future Homes standard to be established in the revised Building regs.</p> <p>The desire to apply a higher standard is understandable and will be necessary, but will require additional resources within the planning department to monitor and ensure that proposed new development measure up to the challenge, particularly given the performance gap between predictions of energy efficiency and the actuality as assessed at completion of the development, and in use. The RIBA whole life carbon assessment scheme is designed for active client engagement rather than third party monitoring. In this case the 'client' is the community and not the developer whose interests may lie elsewhere.</p>
C582	<p>The policy should identify key interventions to achieve climate targets and design policies to support and deliver these, ideally those that deliver maximum co-benefits, addressing issues such as nature recovery and human wellbeing alongside climate resilience and carbon sequestration. Increasing tree canopy cover is one such intervention, as are use of sustainable drainage systems and natural flood management.</p> <p>A rapid increase in the rate of woodland creation has been proposed by the UK's Committee on Climate Change (CCC), to provide a key mechanism to lock up carbon in trees and soils, provide an alternative to fossil fuel energy and resource-hungry building material, and importantly to stem the declines in biodiversity. The Woodland Trust supports the CCC's recommended an increase in UK woodland cover from its current 13% of land area to</p>

	19% by 2050 to tackle this country's biodiversity and climate crises. More information can be found in the Trust's 2020 publication The Emergency Tree Plan.
C583	Development at Mill Mead in the curtilage of the Mill House, Winchester Road, Bishops Waltham has been shown to be carbon neutral with appropriate carbon offset available
C584	Obvious; total carbon neutrality as quickly as possible. Maximum generation of carbon free energy without destroying the environment.
C586	Aiming for carbon neutrality on homes travel water use local employment 15 minute principle for most services accepting online purchases and accommodating into homes (lock boxes, drone parks etc)
C587	The comment has been removed as the respondent requested their response not to be published
C595	The comment has been removed as the respondent requested their response not to be published
C598	Local transport Local building regulations (wrt climate friendly building processes) Tight restrictions on change of use of all greenfield sites to ensure that proposed activities are climate friendly Prominent focus on waste (whether domestic or commercial) Requiring relevant targets to be met through reducing emissions, not by offsetting (which doesn't address the issue in the first place).
C602	Public transport. Investing in buses using less harmful fuels.
C603	The new Local Plan needs to address climate change in a way that supports and complements the delivery of sustainable development. Addressing the impact of climate change in a realistic and proportional way and in a realistic timescale. Ensuring that protecting the local environment is properly considered. Increasing resilience to climate change impacts. Push to reduce use of cement and steel. Promoting low carbon design approaches to reduce energy consumption in buildings. Engaging with appropriate partners to identify relevant local approaches.

	Using local studies to provide a more detailed assessment of local vulnerability to climate impacts and the effects of extreme weather events.

**If you agree with the establishment of a carbon offsetting fund, how should this money be used?**

There were 141 responses to this part of the question.

<b>Respondent Number</b>	<b>Respondent Comment</b>
C20	To change the road layout of Winchester City Centre
C21	To improve the carbon footprint of the area
C23	I disagree with the statement. IF the Council introduces specific policy requirements that have to be met, then there may be circumstances in which an offsetting fund is necessary in order to make a scheme deliverable. Any offset fund must not be priced at such a level as to make development unviable, however.
C36	Disagree because not proposed to restrict its use in the district
C37	To the greatest net benefit
C40	Clearly should be applied to areas of greatest energy waste.
C46	Must be used towards carbon reduction (ie related to why it was charged)
C54	I strongly disagree with the establishment of a carbon offsetting fund but another fund should be set up, not referring to offsetting, for the collection of fines from 1) the poor energy (heating) performance of all new buildings 2) road vehicle emissions offences including idling engines and any other relevant sources e.g. parking offences.
C58	Improving energy efficiency in publicly owned buildings. Investing in public transport. Incentivising passivhaus standards in new builds
C70	An offsetting fund is code for "Not In My Back Yard" - hoping that other areas will lead and make the tough choices. We should be building more local energy projects which combine onshore wind, solar, battery storage (and yes) flexible natural gas generation to provide power during prolonged periods when it's not windy or sunny. The

	electrification of heat and transport are going to be the key drivers of change in the next 15 years and the District needs to be able to respond to the increased demand for electricity from flexible low carbon generation
C78	To plant local forests. Not for carbon tax trading
C116	The comment has been removed as the respondent requested their response not to be published
C119	Carbon offset funds avoid the need to ensure new development is made in the most carbon sensitive way it can A Carbon offsetting fund could be expensive to operate and used as a “back door” tax.
C123	To facilitate carbon reduction programmes
C127	As a priority to reduce the carbon footprint of government owned infrastructure and buildings. As a secondary measure to support local community schemes to reduce carbon footprints. As tertiary measure to support individual applications for carbon footprint improvement schemes. Improvements could be made from better and more efficient water use and recycling; better public transport links that are part funded by the council to encourage their use; increasing biodiversity across the district; supporting schemes that encourage organic food production; segregated cycle lanes between communities; investment in innovative ideas to improve any or all of the above.
C136	No off setting should be allowed. It will create a system were anything will be built.
C147	I believe it should be used as a last resort. If we were to use it though I think we should re-wild and introduce further green belts protecting from additional development.
C148	build communities
C160	The Local Plan should require developers to include in applications an energy hierarchy evaluation: reduce energy demand, improve energy efficiency, source energy from low-carbon renewables, as a very last resort fund carbon offset. Since carbon offset sites should guarantee open green spaces in perpetuity, many Parish Councils like Shedfield will surely back any SHELAA site owners offering suitable sites for carbon or nitrogen offsetting, biodiversity or green infrastructure. Offset income should be used to upgrade buildings in red and amber zones and climate change intervention areas. Installing car charging points and secure cycle storage in communal car parks would also be a good use, since transport remains the key obstacle to achieving the zero carbon target.
C164	Supporting EV vehicle take up (charger installs, home charging point, subsidies on vehicles) Subsidy's to install green tech in homes (solar panels, heat pump, etc) Improve recycling rates and reduce the costs

C168	The Local Plan should require developers to include in applications an energy hierarchy evaluation: reduce energy demand, improve energy efficiency, source energy from low-carbon renewables, as a very last resort fund carbon offset. Since carbon offset sites should guarantee open green spaces in perpetuity, Shedfield Parish Council would publicly back any SHELAA site owners offering suitable sites for carbon or nitrogen offsetting, biodiversity or green infrastructure. Offset income should be used to upgrade buildings in red and amber zones and climate change intervention areas. Installing car charging points and secure cycle storage in communal car parks would also be a good use, since transport remains the key obstacle to achieving the zero carbon target.
C170	To minimise the effects of climate change. Flood mitigation schemes. To promote the use of renewables on all property. Be that solar, wind, air source or other.
C186	Not sure how this relates to anything in the local plan is it simply a means of allowing some (who) to avoid certain policies by buying palliative care from elsewhere?
C187	Carbon offsetting should be used to the extent that carbon can be offset within the district. Planting trees in the district should be strongly encouraged (e.g. on council land and farms) as 0 carbon is impossible given current technology. Any carbon imported to the district should be offset where it can't be prevented.
C189	More loaded questions
C190	For the council's priorities.
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.
C192	I don't agree with the establishment of a carbon offsetting fund it therefore should be used as a last resort.
C198	Reinstating woodland in the county - this might include covenants with private landowners and require Hampshire County Council to consider how best use the farms and land that they own. It appears that some HCC farms are included in some of the development proposals? If so is that to raise money? Should they not use this land stock to respond positively to the climate question and to lead in the area of suitable climate oriented land management?
C200	The comment has been removed as the respondent requested their response not to be published
C207	For whatever the most are the most pressing needs
C208	I quite like the idea, but fear its implementation would be unsuccessful.
C215	To subsidise the adoption of carbon neutral capability - e.g. house cladding/insulation, airsource heat pumps
C229	efficiently!!

C231	A Carbon offsetting fund could be expensive to operate and used as a “back door” tax. It would need very careful thought and consultation with those affected and should not be attempted at a local level.
C236	I am more minded to disagree with the statement. It is imperative that in the first instance all other avenues should be genuinely considered and attempted. Providing the option of contributing to a carbon offsetting fund, even as a last resort, then makes it likely that it will be used rather than achieving genuine carbon neutrality. It encourage 'greenwashing' rather than real, meaningful change. It should not have sufficient money in it for anything meaningful if the policy is being imposed adequately such that it is a genuine last resort. Any money should be used for schemes which achieve a net carbon improvement i.e. better than carbon neutral, in the Winchester district, and which without that funding would not otherwise be taking place.
C239	Public transport
C243	Muddling question, I do not agree with carbon offsetting.
C244	I need to clarify this question as it is confusing - as everyone and every development should be responsible to reduce their/its own carbon footprint
C248	A carbon fund merely allows inappropriate development to take place BUT AT A COST . The development would happen and the land owner of the site or sites would absorb that cost as part of the sales process . Profit might be affected but as the margins are high the cost benefits of a fund contribution would be sustainable .
C253	A carbon offset fund should not be used at all. It is not appropriate under any circumstances at local level.
C260	If the Council is to truly recognise that we are in a climate emergency then it must consider the most effective ways of reducing carbon associated with the built environment. Changes to Part L of the Building Regulations will make all new build housing exceptionally efficient and a model of sustainability. The big wins from a carbon reduction perspective will be the ability to retrofit existing properties which are more often than not inherently inefficient. There is a huge opportunity to use monies from new developments to retrofit existing housing rather than pushing new developments even further, beyond the new Part L. If the Council is serious, it must look at the carbon saving opportunities of retrofitting rather than solely focusing on new development. This may be more challenging to achieve, but if the Council believes in tackling the climate emergency, then retrofitting of existing stock will be key as the most efficient way to ensure the built environment, both new and existing, is as sustainable as possible.
C262	Could be expensive to operate and used as a 'backdoor' tax. It would need very careful thought and consultation with those affected and should not be attempted at a local level.
C264	Ambiguous question. We don't agree with the establishment of the fund.

C277	If it is necessary to establish such a fund it should be used to purchase land to be used for rewilding in perpetuity
C278	All new developments should reflect the future. Concentrate on new builds being more carbon and environment friendly. What's the point in more building that isn't going to meet future regulations.
C282	The fund should be part of the planning application/approval. It should be visible in the local area to which it applies and the benefits should be publicised in the local area .
C291	A carbon offsetting fund should not be established
C292	A carbon offsetting fund should not be used as there is limited evidence for its benefit and is greenwash rather than actual change. If there is extra money to be spent, it should be used to provide homes for nature such as bat, bird and small mammal boxes to support native wildlife. Rewilding paved-over areas should also be considered.
C293	Some use of carbon offsetting will be necessary to achieve carbon neutrality by 2030. Any fund should be used primarily to support local carbon mitigation projects and enhance the environment (e.g. tree planting)
C304	realistically we are not going to reach carbon neutrality by 2030 but reducing our greenfield areas will certainly not help more thought is required as the aims of carbon neutrality and new building hardly fit together
C305	I quite like the idea, but fear its implementation would be unsuccessful. Let it remain a last resort that we hope never to use.
C306	I don't think a carbon offsetting fund is a good idea at all. Sustainable means just that. The question is very poorly expressed.
C308	Carbon offsetting is having you cake and eating it. Just reduce carbon don't just pay for somebody else to to cover your inadequacy.
C315	Whilst we recognize that such an offsetting fund may be required in certain circumstances, it will be important that such funding requirements are not set at a level that impacts upon the viability of residential developments, especially when combined with the costs of all the other measures set out above as well as affordable housing provision and other infrastructure contributions.  Local requirements in excess of national standards will make the district relatively less attractive to developers and this could affect the Council's ability to maintain its five year housing land supply.
C316	To assist with rewilding and ecology, in particular to assist farmers in this objective. They need the money to make up for the fact that new approaches to farming may not produce the income that they need to survive and should be given money to make up for this.

C321	To create natural carbon sinks and focus on helping low income housing to become more energy efficient.
C323	Thakeham believes the fund should be used to provide verified offset within the district where there is high confidence in long-term carbon reduction. For example, fabric energy efficiency or the installation of renewables to council buildings and social housing. Projects should also be selected where there are multiple environmental, economic and social benefits. For example, improved energy efficiency for social housing also brings tenants out of fuel poverty and boosts wellbeing through improved thermal comfort.
C324	As landowner, Hampshire County Council agrees in principle with the idea of carbon offsetting for new development which is in line with national policy (sound). In the event that on-site carbon reduction targets cannot be achieved, the County Council in its capacity as landowner supports a future policy which allows for off-site projects to be identified for developers to contribute towards in order to ensure the delivery of new development that is otherwise acceptable through the Plan period (be effective). The County Council also considers that any introduction of a carbon offsetting fund policy, together with capital values applied, needs to be carefully considered as part of the overall commercial economics of development and avoid duplication with other environmental developer contributions, such as nitrate neutrality (be positively prepared). This approach is recommended to avoid creating viability issues which in turn negatively impact on housing supply (be effective).
C326	I feel a carbon offset fund may well be impractical... I also feel disinclined to, prioritise your list... Yes protecting our water streams and aquifers, are important, But equally, preserving green belt, enhancing our public spaces are of importance as well... I am not qualified to work out how this relates to carbon offsets in terms of new builds. ,
C327	Not in favour of a carbon offsetting fund but if established it should be only be used as a last resort.
C331	Should not be used
C342	It would be preferable for the application to be redesigned unless the type of development has no other form, in which case an offset should be put in place.
C343	Yes, if 'as a last resort', as we agree that carbon offsetting can often be an excuse for not trying hard enough to limit emissions to zero. Offset programmes need to reduce emissions sufficiently to counterbalance the emissions caused and they need to be scaled up beyond the scale we have accepted so far. It would be good, for example, to establish an active transport and public transport fund that would enable modal transfer carbon savings equal to transport emissions introduced by a new development, to fund renewable energy facilities capable of supplying energy consumed in a development, to fund a natural carbon sink equal to the natural carbon sink (trees, grass) displaced by a development, and the carbon embedded in the construction, and a fund for meat-replacement food production could offset the habits of meat-eating occupants.

C344	The comment has been removed as the respondent requested their response not to be published
C345	to work towards a target where carbon offsetting is not required
C346	I disagree with a carbon offsetting fund. Greenwash. And this question is worded to assume that all respondents agree with the concept of carbon offsetting.
C347	A Carbon offsetting fund should only be a last resort - it could be expensive to operate and used as a "back door" tax. It would need very careful thought and consultation with those affected and should NOT be attempted at a local level.
C348	A Carbon offsetting fund should only be a last resort - it could be expensive to operate and used as a "back door" tax. It would need very careful thought and consultation with those affected and should NOT be attempted at a local level.
C351	I don't agree with a carbon offsetting fund. It deludes people into thinking they can carry on polluting because some trees have been planted in a poor country abroad. Unfortunately this may be on land which has been taken away from its original inhabitants/owners by their government or possibly a commercial company without compensation or their agreement.
C352	Funds should be used to support energy efficient improvements to existing homes, providing cycle lanes, tree planting.
C353	It all depends how much money carbon offsetting charges generate, but I would target as a priority landscape-based improvements such as tree planting, improved open green spaces and for Winchester in particular, a campaign to protect and preserve its precious ring of chalk down-land. The money need to go towards visible improvement campaigns that engage and motivate local people, not small gains,
C356	<ol style="list-style-type: none"> <li>1. On Council buildings that can not reduce their footprints</li> <li>2. On necessary infrastructure that needs carbon offsetting.</li> <li>3. On supporting important public buildings such as hospitals, the prison and old people's homes who will find it difficult to make changes.</li> </ol>
C357	<p>The Carbon Offset Fund scheme should benefit householders offering a service to visit properties from a qualified energy expert who will offer advice on how to put in place energy saving possibilities, older properties should be selected or organisations involved like Age Uk.</p> <p>The City Council should invite households to fill in a survey should they wish to do so to assess their own properties against a criteria set out by the fund.</p> <p>Each case should be reviewed and financial assistance should be offered to make savings in their energy bills.</p>
C361	A carbon offsetting fund should not be established

C363	I need to do more research before I answer this question in depth
C364	I would expect there would need to a lot of consultation over pros, cons and how this can be transparently operated
C365	I worry that carbon offsetting is a way of failing to confront the scale of emissions caused by a particular activity. Worse, the arithmetic and science used to justify carbon offsetting is rarely convincing. However, there will be cases where bad emissions practice will persist or be unavoidable and carbon offsetting will retrieve a little of a fundamentally unsatisfactory situation. A district offsetting fund could be pitched realistically and be used to fund: active transport infrastructure public transport home retrofit rewilding renewable energy initiatives.
C378	House prices in Winchester are already far too expensive particularly for younger people and all/any of this will only exacerbate to problems. The planning system is already too long, too bureaucratic, adds unnecessary expense to developments and these proposal will make it worse.
C382	Could be very expensive and would be passed onto inhabitants ( such as the garden recycle bins) Need to be discussed thoroughly with Parish Councils
C385	This does sound like a sensible way to try and improve energy efficiency of existing older building of which there are of course very many
C386	Strongly agree If a development can not demonstrate carbon neutrality it should not be considered.
C387	The comment has been removed as the respondent requested their response not to be published
C388	To insulate public buildings and homes
C392	Is this a "back door tax" and could it be expensive to operate. Not right at a local level.
C397	A carbon offsetting fund should not be established.
C398	my concern with this statement is that it assumes that any developments will have a negative impact on the area's carbon footprint... the priority should surely be to progress developments with the minimum negative carbon impact.... and prioritise redevelopment of existing sites - perhaps looking to develop existing derelict or under utilised sites - such as the industrial estate behind Halfords / Pets at Home in Winnal / the industrial area near the

	postal sorting office / converting some of the shopping area / River Park buildings in to new housing developments (within walking access of local amenities / public transport links / leisure facilities) before extending the city limits to encompass the beautiful, unspoilt farm land which makes the city such a wonderful place to live.
C399	A carbon offsetting fund should not be established.
C400	It is difficult to monitor and enforce; and it leave open many opportunities for bugs avoidance schemes.
C407	A carbon offsetting fund should not be established
C408	A carbon offset fund should not be set up
C424	Carbon Offsetting Fund Funding should come from large industries and transport companies to encourage the development of Carbon Sequestration Areas in woodlands and amenity areas
C428	All options to truly reduce carbon footprint should be explored and used, offsetting is too often used to mitigate when other options could have been used.
C436	Provided it is a last resort. The biggest problem with WCC is the lack of action, which results from lack of staffing with ambition and ability. So use it to employ a member of staff who is accountable only to the Council leader whose role is to make things happen - and equally, to stop things from happening if they hinder action on the climate.
C439	To fund energy efficient improvements to existing homes, providing cycle lanes, tree planting.
C452	Provision for cyclists and electric vehicles
C453	It should be used to a) establish a certification scheme for reliable companies to be available for residents and companies to trust for assessing and converting their heating to renewable sources, (as HCC recently did in a different form with the solar panels) b) and to provide an investment incentive to encourage residents to make such investments eg a 20% subsidy could leverage greater switchover to renewable energy .
C457	Upgrade social housing, eg. better insulation
C461	A Carbon offsetting fund could be expensive to operate and used as a “back door” tax. It would need very careful thought and consultation with those affected and should not be attempted at a local level.
C462	A fund to finance public transport and active travel improvements A fund to encourage renewable energy facilities
C464	A Carbon offsetting fund could be expensive to operate and used as a “back door” tax. It would need very careful thought and consultation with those affected and should not be attempted at a local level.

C471	I don't think this is a realistic option as far too complicated and possibly prohibitively expensive for those affected. It would require an expertise that is unlikely to be available locally.
C480	I would agree with the statement, if it were clear that the greater emphasis is placed on "last resort" and not on "should be used". It would be dangerous to place too low a bar for escaping the requirement that new developments be carbon neutral. If a fund were to be established, the money should be used to support initiatives such as those listed in response to Question 1 in this section.
C482	Offsetting is a limp excuse and should be avoided.
C487	A carbon offset fund should not be used at all. It is not appropriate under any circumstances at local level.
C493	Good building insulation.
C494	A carbon offsetting fund should NOT be established, this is a soft option for none compliance
C497	A carbon offsetting fund could be expensive to operate and used as a "back door" tax. It could also be a way of buying unsustainable infrastructure. It would need very careful thought and consultation with those affected and should not be attempted at a local level. Developers are notorious for using contractual loopholes to avoid meeting environmental or affordable housing commitments (due to 'cost') long after being awarded the contract.
C500	To help fund projects that will improve red/amber areas to become more environmentally sustainable and more pleasant areas to live & work
C511	Offsetting funds are an easy way out for developers and burden future owners/occupiers of buildings with inefficient environments.
C513	A carbon off setting fund should not be established
C514	The developers should not be permitted to buy theirs at out of their responsibilities to build carbon friendly homes. Planning permissions should be stronger in this area.
C516	Don't really agree but if it is allowed:- 1. Money to buy some large areas of land and some smaller around the whole district. The land itself should be managed sustainably and for maximum biodiversity to include public access and diverse areas for carbon storage - trees, bushes etc and small areas for food production. An ideal opportunity for education.
C523	This should not be established. My reasons have been articulated already but I believe to be able to charge for energy use is the ultimate goal of the UN's sustainability Agendas 21 and 2030 with the intent ultimately to introduce global taxation on energy and hence control every human activity.

C528	To invest in low/zero carbon technologies throughout the district including ECVP.
C529	to equip all "public" buildings with energy from renewable sources eg solar panels on roofing, ground heating systems.
C530	Support energy efficiency initiatives that will directly reduce carbon emissions
C532	A carbon offset scheme should only be a temporary solution and only as a very last resort- it does not absolve the District in reducing its carbon footprint.
C535	Winchester Food Partnership has not responded to Qs 2 & 3 as the statements themselves mainly relate to buildings not the whole development area which we think is a missed opportunity. Any land allocated as off-site mitigation must include sustainable management for maximum carbon capture and maximum biodiversity and production, accessibility for the public and managed for mixed recreation including: Edible landscapes for foraging Green infrastructure such as ponds and bogs Work to clear pollution from rivers and ponds Community growing using 'no dig' growing and fruiting trees Community farms Wildlife corridors with sustainability built in
C539	Well established data shows that improving house insulation to reduce energy consumption and permitting roof-based solar applications is the easiest way to quickly and simply encourage better practice.
C540	Agree. Whilst we recognise that such an offsetting fund may be required in certain circumstances, it will be important that such funding requirements are not set at a level that impacts upon the viability of residential developments, especially when combined with the costs of all the other measures set out above as well as affordable housing provision and other infrastructure contributions.
C542	Carbon offsetting should not be used. It is widely discredited and open to abuse (both false accounting and the exploitation of communities in developing nations). Local offsetting through the planting of trees can be used in moderation, but this is unlikely to deliver at the required scale.
C543	Carbon offsetting should be an absolute last resort after all efforts have been made to achieve carbon neutrality with all local development. Carbon offsetting can be seen as an easy and cheap option which can lead to poor practices being accepted - the problem has been relocated but not solved!
C548	To reduce carbon emissions and help meet the cost of renewable energy facilities.

C550	Offsetting is inevitable and needs to be facilitated, but should be a last resort. The fund should be used to upgrade existing stock, from historic buildings to existing council / affordable housing. Grants could also be provided to private home owners.
C553	I don't think carbon offsetting should be used.
C561	Any developments should meet the best environmental standards. Offsetting just passes the problem to someone else. get it right and design properly.
C567	A carbon offsetting fund should not be established
C568	A carbon offsetting fund should not be established
C569	A carbon offsetting fund should not be established
C570	The question is very confusing. I think a carbon offsetting should be one of the tools used to mitigate high-carbon activities and facilitate low-carbon activities. It should be used, not only as a last resort.
C574	Installing solar panels on all suitable existing buildings e.g. Cathedral south roof, if the installation is paid for there would be no need for a huge feed-in tariff . Solar panels are no longer hideous. Changing the doubledecker buses which travel empty to minibuses which are frequent enough to be useful. Making Winchester a tourist destination to encourage people to holiday in the UK instead of flying abroad. Maybe in the sort term offering vouchers for local attractions to UK tourists.
C576	you should not be having this fund
C578	A carbon offsetting fund can be a part of a multi-tool approach to solving the problem, not simply considered a 'last resort' option.
C582	Planting more trees, protecting and extending woodland deliver multiple benefits, in addition to carbon storage, including flood protection, biodiversity, habitat provision, and wider ecosystem services. A offsetting fund should prioritise nature-based solutions for any unavoidable emissions.
C584	No carbon offsetting should be allowed.
C586	The offset should be in the district and aiming first as locally as possible.
C595	The comment has been removed as the respondent requested their response not to be published
C596	This sort of fund should not be established.

C598	Offsetting does not address the issue of climate change- it is not requiring a real reduction in ghg emissions. Any funds raised through this scheme should be directed to reducing emissions elsewhere, including through research & development of new technologies.

## 2 Letter responses for Carbon Neutrality

Letter Respondent ID	Comment
L29	<p>We need many, many more solar panels on roof; of which we have a pretty well unlimited supply. Congratulations to whoever decided to use them on the new leisure centre. I admit that I have no ideas what powers, if any, a District Council has in this matter.</p> <p>Do you agree or disagree with the following statement?                      'a carbon offsetting fund should be used as a last resort'                      Not sure what this means. In general I think offsetting is just a racket.</p>
L50	<p><b>If the local plan includes a strategic policy on climate change what are the key issues that this policy should cover?</b></p> <p>The key to the local plan should be seek remote sustainable new development.                      Policy should be used to ensure previously developed land or brownfield sites are put forward for development before any consideration of new towns or the use of greenfield sites.                      Require developers to build sustainably in terms of materials, carbon footprint and energy efficiency – not simply ask developers to 'consider' these elements of development – and enforce requirements.                      Are the possible Local Plan approaches ambitious enough and how would you rank them in order of priority.                      Not ambitious enough. Agree with ambitions to reduce carbon emissions – improve energy efficiency and use of renewables. BUT could be more ambitious e.g. in terms of preserving the countryside and rural areas – agricultural land, common land and greenbelt. Challenge the government housing allocation again. Go ahead with Central Winchester Regeneration projects. Green up Winchester town – more trees in streets, encourage roof gardening in new apartment developments (like they have done in New York) where possible. Make space for more allotments near where people live (there is a large waiting list) in the District.</p> <p>Do you agree or disagree with the following statement</p>

	<p>A carbon offsetting fund should be used as a last resort.</p> <p>Strongly agree. A carbon offsetting fund may be costly to run and used as a 'back door' tax. It would need very careful thought and consultation with those affected and should not be attempted at a local level.</p> <p>Carbon offsetting allows development/building now and sacrifices the local environment for benefit elsewhere. Offsets are not usually local. E.g. how does tree planting elsewhere in the UK offset damage caused to WCC district local environment and biodiversity. This would not be in-keeping with what WCC is asking parish councils to promote in terms of increasing biodiversity and supporting positive climate change initiatives.</p>

### 9 Have Your Say Poll responses relating to Carbon Neutrality

Have Your Say Respondent ID	Comment
H9	<p>Carbon neutrality is vital to combating climate change but it is not the only environmental issue that will affect the future of the planet - the alarming decrease in biodiversity (in terms of species and ecosystems) is not only driven by climate change but also by human activity (e.g. building). A report by the WWF shows that global animal populations have declined by 68% since 1970. If keystone species start disappearing (due to human activity unrelated to climate change) this will have a devastating impact on human life (e.g. decline in bees). Carbon neutrality is not enough on its own to save the planet as we know it today. We must do more to conserve the environment.</p>
H49	<p>Very difficult to select from categories available, given they are clearly all important. This has also so far been very much a standout year, where individuals' priorities have changed substantially, but we of course need to focus on our way out of the pandemic, and therefore seek a hybrid plan that satisfies our priorities pre lockdown 1, and into a slightly different future to the one we previously planned for. Certainly, I would like to see a greater number of sustainability approaches to the local plan (1) analysis on water and waste (2) affordable green energy sources for homes, street &amp; Christmas lighting, schools, shops, restaurants, and construction (3) reduction in traffic by encouraging as many people living in Alresford to leave their cars behind and walk to the Alresford shops and restaurants, as well as to purchase locally-sourced produce - ensuring that local business rates are suitable and that local businesses are sustainable and can grow (4) greater focus on promoting health in the community - outdoor</p>

	exercise, diet and promotion of preventative health. We have a number of locally-sourced ingredients, fabulous outdoor park and countryside spaces. Three of the key known risks to becoming ill from Covid 19 have been Age, Obesity and Diabetes, so focussing on the 'Living Well' aspects are enormously important - ensuring outdoor recreation spaces including the vast network of countryside trails, outdoor gyms, healthcare infrastructure, additional cycle rack spaces, affordable access to local technology and facilities.
<b>C75</b>	It is important that we preserve the reasons why many of us choose to live in the Winchester area. Green spaces, clean air, a historic, vibrant and interesting city centre, not just an overdeveloped soulless conurbation. E.g. Basingstoke. However times are changing and the City centre needs to be redeveloped to reflect the future not the past. More homes in the centre area, better green transport links to the outlying area and housing developments in the Winchester area need to be cohesive communities, not just bolted on to existing places or just Winchester expansion
<b>H61</b>	The Plan needs to be focussed on climate change and its implications and risks for life (water and clean air). Everything else, the environmental damage and pollution we cause, the case for higher density, but better, housing, sustainable, shock mitigated power sources, green transport, and well being needs to fit under this overall issue and is one that the nation as a whole must address. What we have seen in the last year regarding CoViD and the lives lost will likely be low compared to the damage human induced climate change will cause (and is already causing).
<b>H80</b>	I support the Carbon Zero priority. The mindset needed to achieve this should mean most of the other strategic goals will be achieved such as bio-diversity, living well, sustainable transport and low carbon infrastructure. Affordable housing, a vibrant economy and attracting young people to live in Winchester go hand in hand. We need to learn from European cities that are ahead of us in achieving these goals.
<b>H99</b>	The loss of biodiversity and climate change are the most pressing issues of our time. The imperative of addressing these must be central to the new Plan, and given paramount importance. Other considerations (including housing and the economy) are also important, but should not compromise progress to reverse the disastrous trajectory of loss of biodiversity and climate change.
<b>H100</b>	The local plan needs to support all generations respectfully. With no Planet B, the older generations need to focus on repairing the damage we have done.
<b>H133</b>	I am very pleased to see the council working towards carbon neutrality and increasing biodiversity. The needs of future generations should be a priority in all plans i.e. ensuring we leave the environment in a better state <a href="https://www.futuregenerations.wales/about-us/future-generations-act/">https://www.futuregenerations.wales/about-us/future-generations-act/</a>
<b>H137</b>	Addressing the Climate Emergency has to be the top priority

## 0 Social Media responses relating to Carbon Neutrality

### 51 Email responses for Carbon Neutrality

Respondent ID	Email comments
E193	<p>I am writing to say that, I am a Winchester District resident.                      I do not support new towns in the countryside and I greatly oppose option 3.                      By allowing building in the countryside I feel we will lose so much of our wildlife habitat.                      The increased car use would cause more air pollution and I feel that the traffic would increase through Micheldever itself.                      Trusting you will make the right choice.</p>
E195	<p>I am a resident of Micheldever Station and am therefore a resident of Winchester District. I am writing in response to the strategic issues and priorities consultation and in particular the proposed plans for a New Town at Micheldever Station. I write to provide my view that I oppose Option 3 and do not support new towns in the Countryside and in particular a new town in Micheldever Station.</p> <p>Having lived in Micheldever Station for a number of years there is already significant pressure on local resources and amenities which are insufficient for the number of developments that have already been built in the village to-date. New towns need new infrastructure including roads, schools, electricity/gas, water, sewage and other carbon heavy services. There is also a need for health care facilities, bus and transport links and additional amenities at the train station. Building these has major adverse implications for the environment and the Council's carbon neutrality commitment. Additional housing should be built where these amenities already exist in and around the city of Winchester (or Basingstoke) where new building has already been established. New towns encourage car use and their layouts often work against walking and cycling. Even those near public transport invariably end up as car-dependent developments. It is highly unlikely that those living in the new town will commute by train. The majority will continue to drive as indeed is the case currently with those living in the new developments within Micheldever Station driving to work/schools instead of taking the train.</p>

	<p>2. Building on brownfield and previously developed land has a much lower impact on the environment. Building on countryside degrades biodiversity by destroying and fragmenting habitats and causing noise, air and light pollution. How is it suitable to surround a national forest (Blackwood) with a new town? The current lockdown has taught us about the importance of being able to escape from towns into green spaces for our mental wellbeing. For most of us gardens and green spaces have been our saviour. If green spaces are now being turned into towns this goes against this important community need.</p> <p>3. Green fields provide critical benefits such as water, food, flood control, leisure and carbon capture and storage. The disturbance caused by construction releases huge amounts of stored carbon into the atmosphere. Green fields are hugely important to people’s health and mental wellbeing, another Council priority.</p> <p>4. With massive and growing development on our doorstep at Basingstoke, it is crucial that the area around Micheldever Station remains as a green buffer if we are to avoid urban sprawl between Basingstoke and Winchester.</p> <p>I hope you will take into account the views of local residents when considering next steps. Micheldever Station has already lived through the environmental impact of a number of new build developments within the village.</p>
E246	<p>I really cannot believe you are still seriously considering a new town around Micheldever. This has to be a joke right?</p> <p>You people are prepared to destroy our countryside, our environment of what little we have left, plus take away agricultural land, land that is used to feed people. You can call it what you like, eco town, market town but the results will be the same. Carbon neutral? You're having a laugh. More cars, more rubbish, more impact on the already inadequate infrastructure.</p> <p>I trust common sense will prevail and this ludacris proposal is put to sleep once and for all.</p>

E335	<p>I've chosen to respond to the local plan consultation via letter, as at the outset I must say that the consultation questionnaire is overly complicated and detailed. Almost incomprehensible to anybody outside the circles of the local authority.</p> <p>Homes for All</p> <p>I believe that the most important function of our Local Plan is to agree how and where to provide homes for our current and future needs. The consultation document presents four options for housing growth and of these, Options 1 and 4 are acceptable, Options 2 and 3 are wholly unacceptable. I strongly support the proposal made by the Save South Winchester Group that using previously developed land (their Option 5) would be by far the best option in order to deliver homes required.</p> <p>Rash decision making to build large scale developments, such as 'Royaldown', on greenfield sites would leave a disastrous legacy and permanent degradation of Winchester and the surrounding areas. It would destroy open countryside and agricultural land and effectively merge a number of communities that distinctly give Winchester its character. Not long the day on this tract that Winchester would merge with Chandlers Ford, Eastleigh and Southampton. How can it be consistent with the climate change emergency to concrete over large swathes of agricultural land, blighting panoramic views that for hundreds of years have helped make Winchester what it is? It is the responsibility of the Winchester local authority to protect the historical essence of Winchester and surrounding areas.</p> <p>Hampshire Green Belt</p> <p>I strongly support a new Green Belt for land to the south west of Winchester in order to protect both the rural Parishes and the shape and setting of the city. Incorporating a new Green Belt into the Local Plan would stop large developments, such as 'Royaldown', and the merging of settlements; it would force development onto brownfield and previously developed land and enable limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure, services and community life.</p> <p>Living Well</p> <p>One thing that COVID has highlighted is the need to access open space for recreation, walking, running, cycling etc. The number of people that use the lanes and footpaths between Oliver's Battery, Compton and Hursley for these activities is testament to the need to protect these areas. Winchester's recreational areas are even now inadequate to meet the needs of the population. I have lived in a number of beautiful cities worldwide and their large accessible open spaces differentiates the best from just another urban sprawl. Insufficient and</p>
------	--

	<p>not enough bold thought is given to this priority. Just think how London would be viewed today if it didn't have its magnificent parkland and commons or Winchester, without St Catherine's Hill and the Water meadows (by courtesy of Winchester College). What else has been planned for as big open space accessible by Winchester residents since then? Is a concrete sprawl the legacy you wish to leave for future generations?</p> <p>Carbon Neutrality I strongly disagree that we need to achieve Carbon Neutrality by 2030. This is unrealistic (as 70%+ of responders felt in your Slido poll). It is 20 years earlier than nationally required. It doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan. It will not allow sufficient time for considered thought and could create 'easy' solutions, but poor decision making, such as covering our countryside in wind and solar farms, to facilitate 'achievement'. Biodiversity is not served well by solar farms. If these are required to meet Carbon Neutrality, they should not be counted as green space or planned for within areas where they are highly visible i.e. destroying long views or set alongside public footpaths where they would impact on the enjoyment and 'health giving' aspect of the countryside.</p>
E343	<p>Regarding the Local Plan, our comments are as follows:</p> <p>4. PAGE 17. Just a "wish list" – nothing specific.</p>
C283	<p>As a Winchester district resident (Micheldever) I would like to offer the following comments on the proposed local plan.</p> <p>Firstly I am pleased to read of the prioritisation of environmental issues, surely the most pressing issue in the short to medium term.</p> <p>I would be keen to see significant improvements in public transport, particularly services to rural communities where car transport is really the only viable option for many at the moment.</p> <p>Improved cycle ways would also be highly welcome.</p> <p>The current experience of the COVID pandemic has emphasised the importance to our health and well-being of green spaces and I would argue that every attempt to maintain current green areas is essential.</p> <p>To this ends, new housing developments should I feel be focussed on brown field and in-fill, rather than large scale new green site development which, because of the need for new infrastructure construction (assuming,</p>

	<p>that is, that appropriate facilities are factored into their design- something that often is sadly lacking in the finished product), are unlikely to be environmentally sound and likely to be an overall encouragement to personal car use rather than public transport and generally reduce the quality of life for those in the area. I feel that, arguably, once the effects of COVID become clearer there is going to need to be a revitalisation of existing urban areas, re-engineering city centres and high streets rather than constructing increased urban sprawl.</p>
<p>C523</p>	<p>Document attached to email</p> <p>This statement is not supported by any empirical data within the IPCC report and is a purely political summary to drive government action (the 'I' in IPCC, after all, stands for Intergovernmental, hence the whole organisation is necessarily a political construct). It is based on flawed, failed and unvalidated Computer models, built by those whose income depends upon the existence of Global warming/climate change/climate emergency and who are more climate activists than 'scientists'. These computer models are unable to establish accurate and meaningful global or regional climate outcomes. As the saying goes, garbage in, garbage out.</p> <p>The computer simulations project future warming (thus being the rationale for global warming climate policies) and show significantly higher temperatures than that being observed. Only the Russian climate model and satellite/weather balloon data closely match present temperatures in the lower troposphere. This suggests that most climate models ascribe too great an effect of warming (climate sensitivity) to carbon dioxide. This means the climate models should not be used to set public policy.</p> <p>The range of climate change discussed in the IPCC report falls well within natural variation since 1850. Likewise, global temperature records are incomplete, inconsistent, methods/placement of monitoring stations have changed, and temperatures are not monitored at equidistant places at the same time.</p> <p>Mankind has already survived far more severe temperature fluctuations than 1.5°, and the cold periods were always the worst periods. Besides, modern civilizations have far more technical means of adapting to climate change than earlier societies had. In fact, there were much warmer periods than today, through history, e.g., the Medieval warm period, the Roman warm period and the Minoan warm period. These warm periods were marked by major advances by humanity.</p> <p>Regardless of any true or perceived impact on climate made by anthropogenic CO2 emissions, any</p>

	<p>efforts by Winchester district to reverse global climate emissions is futility in the extreme. Developing nations have no emissions reduction commitments whatsoever under the incompetently contrived Paris Agreement and yet are dominating all global energy use and growth as well as all global CO2 emissions increases since year 2008. China alone is planning construction of 121 Gigawatts of coal plants (more than is being built in the rest of the world combined). This is equivalent to the entire EU's existing capacity which started in its five year energy planning and building cycle that continues through year 2025.</p> <p>EIA data shows that the developing nations accounted for about 60% of all global energy use in year 2018 and about two thirds of all global CO2 emissions. By 2050 EIA forecasts that the developing nations will be accountable for about 70% of all global energy use and about three quarters of all global CO2 emissions.</p>
--	--

<p>E604</p>	<p>I find it extraordinary that, after nearly 30 years of rejection by the Government, Hampshire County Council, Winchester City Council and Micheldever Parish Council that opportunistic landowners are still seeking permission to build a town the size of Petersfield on prime farming land at Micheldever Station. Surely No means No? We do not need it.</p> <p>What has changed? Perhaps one of the most significant changes over the years is the reduction in the amount of land available for farming in England largely through building and infrastructure projects. The most recent figures published by DEFRA on 22 December 2020 show that between 2019 and 2020 the utilised agricultural area (UAA) in England decreased with the total croppable area decreasing by 1.5%. Detailed figures for the main arable crops and livestock are shown in this report and show an alarming decrease. As an island nation it would be sheer folly to consistently build on good agricultural land.</p> <p>Saving the planet is a high priority for all of us. Following the national lead, Winchester City Council has placed great emphasis on reducing the local carbon footprint. Effectively creating an urban sprawl from Winchester to Basingstoke, with all the infra structure and habitat pressures that would create, is hardly following this priority or the principles of good governance. We simply cannot continue to build vast numbers of houses on greenfield sites thereby significantly increasing our carbon footprint, when, in the case of Micheldever, it is not necessary to do so. All the independent figures indicate that the number of houses allocated to Hampshire County Council, and in turn by Winchester City Council, to build in the coming years can be met, in the main, through utilising already used or built on sites. Equally we should not be offering up land for unnecessary large scale development to help other Councils fill their housing quotas should we be asked to do so.</p> <p>Winchester is regularly sited as one of the best places to live in the country, most recently in the 2021 Sunday Times Annual List. One of the reasons for the City being described in this manner is because it remains very much a country town in the middle of glorious countryside which residents can enjoy. The city will quickly lose its attractiveness if huge swathes of housing are built on its present boundaries thereby significantly damaging the environment.</p> <p>I can see absolutely no logical justification for agreeing to any size of development at Micheldever Station. I do not support New Towns in the countryside and I therefore strongly oppose Option 3.</p>
<p>C323</p>	<p>Document attached to email</p>

C342	Questionnaire attached to email
E739	Document attached to email
E835	<p>I would like to emphasise the need to consider protection of the incredible ecosystems and ecology of our rivers and the habitats that are an integral part of the catchment.</p> <p>There is great focus on planning and net zero but I can't see much weight being placed on our natural systems. Protection of these are vital to achieve net zero. These areas are hugely vulnerable and under great pressure from a multitude of factors including commercial and residential discharge and the volume of people accessing the rural areas. This latter point it to be encouraged, but needs to be managed in a way that supports rather than degrades the natural world people want see.</p>
E937	<p>This is the response from Wickham Society, a civic society within the community.</p> <p>We have reviewed the consultation documents and questionnaire and do not feel it is appropriate for the Society as an organisation to respond directly to most questions as many of them are relatively subjective. We have therefore forwarded the details and web links to our members and have encouraged them to respond individually with their views.</p> <p>However, Wickham Society believes that the following points should be included as part of the next stage of discussion on the future of the district:</p> <ul style="list-style-type: none"> <li>* We agree with the overarching vision and aspirations of this revised local plan. The impact of climate change, long forewarned, is now with us and the Society believes that we all have a responsibility to learn from past mistakes and so the Council should include climate change implications in every strategic decision to achieve the aim of carbon neutrality by 2030.</li> <li>* The pandemic has confirmed that access to outside space is a vital part of supporting people's well-being. Every opportunity to protect existing countryside and green spaces and to retain existing settlement boundaries must be a priority.</li> <li>* Communities such as Wickham value their distinct identities. With a huge (6000 homes) development</li> </ul>

<p>immediately adjacent to the southern boundary of Wickham, it is crucial that the small separation provided by the existing farmland is maintained – thus creating a vital green belt between Wickham and Welborne. Housing development in this settlement gap should be expressly forbidden as it is in the 2014 Winchester District Plan.</p> <ul style="list-style-type: none"><li>* Any additional housing should be developed first on brownfield sites or within existing buildings, be respectful of the local character and ideally be where there are established public transport hubs and employment. We believe the opportunities for the development of such locations for homes has increased with the rapid decline of high streets and should be taken to retain life in the centres of Winchester and surrounding market towns.</li><li>* Wickham is located on the southern boundary of the district. It suffers the environmental impact of its position at the crossroads of two A roads and a number of B roads. Levels of traffic and congestion have increased substantially due to housing developments to the east in Denmead, Havant and Waterlooville, to the south from Whitely, Fareham and Gosport and to the west from Waltham Chase, Bishops Waltham and Hedge End and beyond. This will be greatly exacerbated by the creation of 6000 homes in Welborne, less than a mile south of Wickham, which is due to start in the next two years. Wickham urgently needs a review of traffic bottlenecks and pedestrian danger spots with action to mitigate these problems before any kind of further development is even considered to take place in this locality.</li><li>* Following the pandemic, there also needs to be further review of the minimum size and facilities within an individual dwelling, for example, sufficient living rooms for families to work from home or support home schooling. Assuming a continued reluctance to use public transport, adequate parking with secure access to a recharging electricity supply will need to be reconsidered in new developments in areas outside the city as bus routes in rural areas become increasingly unviable. An example of how existing parking allowances are inadequate is well known in this parish in Knowle Village – designed and built as a purpose-built community in the early 2000's. Residents have to rely on cars to access every service and employment; the streets are clogged overnight and at weekends, compromising the ability of emergency services to access some parts of the village.</li><li>* The Society believes that the planning system must work for people and the environment and that developers' needs are secondary. The countryside is part of the solution to carbon neutrality and for any new</li></ul>
--

	<p>development there must be clear evidence of housing need in that location, with the necessary infrastructure to support it. The apportionment of a specified number of houses as a fraction of a government-dictated requirement for the district is not an appropriate way of determining the housing needs for a village like Wickham.</p> <p>* There must be an audit trail to show the way in which each new development is going to offset its carbon footprint – both for embedded carbon incurred during build and the ongoing usage.</p> <p>The countryside is part of the solution to the climate emergency and every effort must be made to protect it.</p> <p>You have asked for ideas of indicators to help monitor the district plan objectives. We put forward the following suggestions:</p> <ul style="list-style-type: none"> <li>* Snapshots of the percentage of children who walk to school</li> <li>* Pollution levels</li> <li>* Levels of fly tipping and recycling</li> </ul>
E1051	Document attached to email
E1055	<p>I am writing on behalf of my client, Hallam Land Management Limited, who are promoting the future development of land at Denmead for new housing and associated uses. Enclosed to this email is the consultation response, and accompanying plans, to the Strategic Issues and Priorities consultation for Winchester District Council. The land concerned is shown on the Plans and has been subject to submissions previously in response to the Strategic Housing Land Availability Assessment.</p> <p>Document attached to email - I am writing on behalf of my client, Hallam Land Management Limited, who are promoting the future development of land at Denmead for new housing and associated uses. The land concerned is shown on the Plan attached and has been subject to submissions previously in response to the Strategic Housing Land Availability Assessment.</p>

	<p>We welcome the opportunity to comment on the Council's current consultation concerning Strategic Issues and Priorities. We have set out our response on the basis of a number of themes corresponding to the Issues identified in the consultation document.</p> <p>Issue 1: Carbon Neutrality.</p> <p>The Sustainable Development Objectives listed on page 12 of the consultation document are unobjectionable and provide a sound basis to contribute towards the NPPF aims in this regard and the United Nations Sustainable Development Goals.</p> <p>These objectives will be relevant to a number of the land use considerations in the new Local Plan. It is especially important to recognise the three dimensions of sustainable development; too often new development is simply characterised as unsustainable, whereas, in fact, growth and development for social and economic purposes is fundamental to ensure thriving and successful communities. Ensuring that an appropriate and adequate supply of new homes to meet the needs of the current and future generations is a fundamental requirement. If the Plan fails to ensure this, there will be adverse social and economic outcomes.</p> <p>Whilst we recognise that the District has set an ambition to be carbon neutral by 2030, this must be seen in the context of the Government's Nationally Declared Contributions arising from the Paris Agreement, set out in the Climate Change Act (as amended in 2019) and its statutory obligation to achieve zero net carbon emissions by 2050. This will require both reduction in carbon emissions from human activity, and increased carbon sequestration in order to off set residual emissions.</p> <p>As such, the location of new development, and the ability to reduce the amount of travel, is a key land use consideration in these terms; this is likely to lead to a strategy that has particular regard to the proximity of new development to a range of facilities and services and main settlements both within and adjoining the District. Also relevant is the environmental performance of new development. Central to this are proposed amendments to the Building Regulations (Part L) which concern energy conservation. In its Response to the Future Homes Standard consultation published earlier this year the Government indicated its intention to amend the Building Regulations in 2022 and 2025, in order to require reductions in carbon emissions from new homes of 31% and 75% respectively.</p> <p>Achieving these reductions over this time period will require particular changes to the environmental performance of new dwellings with associated new technologies. These are considerations that extend beyond planning policy to construction supply chains.</p> <p>Issue 2: Biodiversity and the Natural Environment</p> <p>Protecting and enhancing the District's Biodiversity and Natural Environment are important principles. Such</p>
--	---

	<p>objectives do not preclude new development but rather require consideration of appropriate locations and sites and design responses that respond positively to accommodating new development alongside green infrastructure enhancements. The Government’s long-awaited Environment Bill will mandate particular requirements of new development in this regard.</p> <p>Elsewhere we have seen suggestions that planning policies should exceed the net-gain requirements to be set out in the Environment Act when this is enacted. This raises a particular issue that the Local Plan would have the statutory weight of Section 38(6) which could conflict with the statutory weight of another Act of Parliament. This requires careful consideration.</p> <p>Issue 3: Homes for All</p> <p>We note that, by reference to the Standard Method in the NPPF, the housing requirement for the District would be 14,000 new homes over a 20-year period (700dpa). This compares to the requirement of 12,500 in the current Local Plan and the average annual number of completions between 2011 and 2019 of 470dpa. It is clear that there will need to be a step change in housing completions over the period of the new Local Plan and this will require sufficient housing land to be identified for this purpose. This is an important consideration for the spatial strategy to ensure that this increase in housing can be provided in a timely fashion.</p> <p>The consultation document considers various spatial options; whilst each performs somewhat differently, it is particularly noticeable how Option 4 which directs additional development to the market towns/rural areas is beneficial in terms of widening housing choice and strengthening local centres.</p> <p>When this Option considers the proximity of those settlements relative to the main urban areas within and adjoining the District it also affords significant accessibility advantages. A location such as Denmead which is close to Waterlooville is particularly well placed in these terms. A hybrid option which affords a priority to Winchester Town and then weighs distribution of the market towns and rural areas focused to those settlements close to the established urban areas within and adjoining the District, will be advantageous.</p> <p>Given the nature and characteristics of the District and the need to improve housing supply, in considering new allocations a balance needs to be struck in favour of small and medium sites rather than a single focus on a strategic allocation (option 3).</p> <p>We do not support the designation of a new Green Belt at the present time. This would require exceptional circumstances to justify this and an assessment of its relative merits and dis-benefits would need to be undertaken at a sub-regional level in the context of future and long term development needs that exist at that wider spatial geography.</p>

E1099	<p>Hampshire Hospitals NHS Foundation Trust (the Trust) welcomes the opportunity to comment on the consultation documents. It congratulates the City Council on the clarity and quality of the consultation web pages.</p> <p>The Trust has reviewed all the consultation material and offers these comments as a coordinated response. The Trust is supportive of the ambitions and objectives outlined in the strategic issues and priorities and looks forward to being engaged during the next stages of plan making.</p> <p>The Trust is fully supportive of the objective to achieve carbon neutrality by 2030 and to encourage others to do the same. The Trust would welcome direct engagement with the City Council, the University and other public sector bodies on collaborative projects. The Trust supports the concept of biodiversity net gain being considered off site and would be willing to participate in such initiatives.</p> <p>On environmental and sustainability, the Trust supports the promotion of sustainable transport and active travel and the aim of ensuring that new development is well connected with appropriate infrastructure. It is keen to encourage modal shift away from the car, which has both direct and indirect health benefits including the improvement of air quality. The Trust would like to discuss ways of improving cycle access to the Royal Hampshire County Hospital (RHCH) and supports the provision of additional park and ride facilities to serve the city.</p> <p>The Trust supports the '15-minute model' and enabling local communities to live well, whilst ensuring that all members are able to access critical infrastructure. In considering its options for new healthcare provision, the Trust is keen to ensure that any movement of emergency and unplanned activity from the city centre is supported by well-developed and sustainable transport links.</p> <p>It is very encouraging to see a strong focus on 'living well' and the recognition of the importance of open space, sport etc to physical and mental health. The recognition of delivering health support in, or close to, people's homes is supported including because of the need to plan for an aging population. The Trust supports out of hospital community care within GP surgeries, community pharmacies and within the home, some of which is enabled through digital innovation in healthcare.</p>

	<p>The Trust supports the intention to diversify the economy through the promotion of the knowledge, tourism, creative and education sectors. Re the latter, the Trust continues to work closely with the University of Winchester to identify opportunities for joint working, sharing of facilities, and efficient use of resources. We are working closely on the development of new healthcare courses and supporting facilities. The Trust recognises the need to diversify the city centre, including through the re-use of redundant retail space for flexible office space. The Trust would be keen to explore the opportunities afforded by such space and it has previously discussed with the City Council some Trust services being provided within city centre locations to improve accessibility and support diversification. In the case of historic buildings there will need to be a balanced approach to ensure that conservation interests do not prevent the requisite technical and infrastructure upgrades to make the buildings fit for purpose.</p> <p>The Trust supports the suggested use of developer funding to support the provision of community infrastructure and welcomes the use of the Community Infrastructure Levy (CIL) to contribute to the provision of healthcare provision as has been done creatively in other parts of the country. CIL funding should be available to support the reprovision of health services being considered through the Hampshire Together Modernising Our Health and Hospitals Services Programme, including investment in the RHCH and developments in the city centre, such as local maternity hubs.</p> <p>Through the MOHHS Programme, there will be investment in, together with a reconfiguration of, the RHCH. This could result in surplus land and buildings during the Local Plan period. This land and buildings could be suited to residential, education or commercial use.</p> <p>The Trust hopes that these comments are a helpful</p>

E1217	<ul style="list-style-type: none"> <li>• Carbon Neutrality</li> </ul> <p>St John’s support these objectives. The only question is what initiatives are currently being supported by WCC and the BID to introduce energy and water saving initiatives collectively or by sector as per the stated “Climate Intervention Areas”?</p> <ul style="list-style-type: none"> <li>• Biodiversity and the Natural Environment</li> </ul> <p>St. Johns supports these objectives but see later comments on affordable housing for the elderly.</p> <ul style="list-style-type: none"> <li>• Conserving and Enhancing the Historic Environment</li> </ul> <p>St. John’s supports these objectives but would welcome further guidance on Conservation Character Area Appraisals? We are particularly interested in the likely impact on our housing and property portfolio of important listed buildings?</p> <ul style="list-style-type: none"> <li>• Homes for All</li> </ul> <p>The key issue for St. Johns is the need to provide specific guidance and ideally preference for supported housing for the elderly in housing allocations especially in or adjoining the City and City Centre. This is one of the housing needs assessment options and would of course be our first preference. We have much evidence of demand but are finding it difficult to secure sites. This could be accommodated in any major new releases as expressed as a preference in the consultation document and in City Centre releases especially on WCC owned sites.</p> <ul style="list-style-type: none"> <li>• Creating a Vibrant Economy</li> </ul>

	<p>St. Johns has 2 issues here: the need to provide viable and clear guidance (not just “flexibility”) on changes of use in the city centre where we have a significant proportion of properties the income for which supports our charitable activities; we have a special interest in the practicalities of change of use of vacant or underused upper stories; as per our vision contribution; we feel there is a need for a clearly defined and resourced plan for the enhancement of the City Centre to sustain its attractiveness for investment. We also have an interest in sites outside the city centre that might contribute to a viable economy.</p> <ul style="list-style-type: none"><li>• Promoting Sustainable Transport and Active Travel</li></ul> <p>St. Johns supports these objectives but feels that the issue of car parking for visitors, residents and workers needs careful consideration within the City Centre. Whilst supporting alternatives to City Centre parking, with the substantial projected increase in electric vehicles it believes that the issues regarding traffic pollution will change in the next 5 years, the local Plan period.</p> <ul style="list-style-type: none"><li>• Living Well</li></ul> <p>St. Johns directly espouses the issue of wellbeing. Our Hand in Hand Initiative as currently and proposed demonstrates our commitment to the health and wellbeing of the elderly but the support processes we intend will expand this in the area of dementia support at home. Our proposals for new housing for the elderly demonstrate why we believe we are particularly well qualified to contribute to this in the next stage of the Local Plan.</p> <ul style="list-style-type: none"><li>• Low Carbon Infrastructure and Local Plan Viability</li></ul> <p>St Johns has committed to low carbon in its existing properties – listed status permitting and – in our latest new proposal for alms-houses. The viability issue remains how to secure sites at a price that will allow our special needs to be accommodated in an affordable manner.</p> <p>The points above about sustain and enhancing the attractiveness of the City Centre for investment in an attractive environment, for example with wide plans for enhancement, pertain here too.</p> <ul style="list-style-type: none"><li>• Delivery and Success of the Local Plan</li></ul> <p>St Johns welcomes the opportunity to contribute to this consultation and looks forward to responding to future drafts</p>

E1236	<p>Network Rail welcomes the opportunity to comment on this important consultation and would like to be kept informed on any future updated on the Local Plan.</p> <p>Network Rail are in support of the Councils priorities, particularly the need for sustainable transport promotion. We welcome the focus on the need to promote active travel and integration of transport modes, as this aligns with Network Rails views.</p> <p>Network Rail acknowledge the push to have new developments close to railway stations and other transport options to ensure the modal shift and decarbonisation aspirations are met and, of course, Network Rail will continue to work with councils and developers as and when development applications come in to understand how they will impact stations and services in and around the area.</p> <p>Network Rail have several stations within the Local Plan area, one of such is Winchester, which is operated by South Western Rail (SWR). Network Rail would like to see SWR consulted as well.</p> <p>Below we have reflected on some of the Priorities.</p> <p><b>1. CARBON NEUTRALITY</b></p> <p>Consideration needs to be given for a cycle hub or improved cycle parking close to the stations. Provision for better walking routes to / from the station to residential and business areas should also be considered as part of the plans. There is a lot that can be done at stations if funding is available such as use of solar powered lighting in waiting shelters, and rainwater harvesting systems (e.g. collecting rainwater from the drainage in our canopies for flushing toilets) – perhaps introduce water fountains at the station to reduce single use plastics.</p> <p><b>2. BIODIVERSITY AND THE NATURAL ENVIRONMENT</b></p>

	<p>Calm, green spaces in and around the stations – these should not affect the operational needs of the station but greener areas for passengers to wait, or herb / wildflower gardens to attract bees and butterflies are a lovely addition.</p> <p><b>3. CONSERVING AND ENHANCING THE HISTORIC ENVIRONMENT</b> Some of the heritage features could be improved externally and internally at the stations within the district if the funding is available for an improved passenger experience.</p> <p><b>OFFICIAL</b></p> <p><b>4. CREATING A VIBRANT ECONOMY</b> Improved sustainable transport links are essential to economic growth – accessible cycling and walking routes to bus and rail services again are very important.</p> <p><b>5. PROMOTING SUSTAINABLE TRANSPORT</b> As above – good, accessible walking and cycling links, and a cycle hub / parking at the station. The first and last mile of people’s journeys are important in encouraging sustainable transport and linking developments to stations.</p> <p><b>6. LIVING WELL</b> Calm spaces, accessible walking and cycling routes can improve wellbeing of passengers.</p> <p><b>Level Crossings</b> As part of Network Rail’s license to operate and manage Britain’s railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable. We believe that any future developments and plans should take into consideration the impact on use of these crossings and any resulting increase in risk. This clearly will require early consultation between the planning authority, developers and NR to identify ways that any increase in risk can be mitigated. Network Rails level crossings teams’ welcome further discussions as the plan progresses.</p>

E1245	<p>Cheriton Parish Council: Comments on proposals contained in Winchester Local Plan</p> <p>Carbon Neutrality:</p> <ul style="list-style-type: none"><li>• Support the principle.</li><li>• Need for substantial investment programme to incentivise householders to move from hydrocarbon based energy systems to renewable systems. Just focusing on new builds is unlikely to be enough.</li><li>• Need to be very mindful of impact of carbon offsetting sites on rural communities. Thorough and meaningful consultation regarding plans for initiatives such as solar farms, wind farms, hydrogen production, etc., will be required. Such plans should be complimentary to rural environments.</li></ul> <p>Biodiversity and Natural Environment</p> <ul style="list-style-type: none"><li>• Understanding biodiversity in an area like the parish of Cheriton will be essential; decisions (eg roads, new housing developments, increased traffic, large events like Boomtown, etc., should fully determine the impact on species and the natural environment before irrevocable actions are taken).</li><li>• Important to reconcile policy and all biodiversity considerations with licensing decisions when considering large events such as Boomtown.</li><li>• Important that policies align with neighbouring authorities particularly the National Park.</li><li>• For Cheriton the Chalk Stream Conservation (all aspects of flora and fauna) and flooding are particularly important issues. Decisions and actions taken in Winchester impacting on neighbouring communities should be made with full consultation with those communities.</li></ul> <p>Conserving Historic Environment</p> <ul style="list-style-type: none"><li>• We fully support conserving the historic environment; our village is the home to many listed buildings and buildings of historical interest. We observe that retrofitting historic buildings to be more energy efficient can be quite difficult and should, we feel, be less of a priority than more modern buildings that may be easier and cost less and cover a larger majority of houses and families.</li></ul> <p>Homes for all</p> <ul style="list-style-type: none"><li>• Winchester needs to be a good neighbour when making planning decisions, reference impact of the decision</li></ul>
-------	---

	<p>to allow the development at Sun Lane, Alresford on increased traffic through Cheriton; leading to Cheriton becoming a “rat run”, especially at peak times.</p> <ul style="list-style-type: none"><li>• Housing need in rural communities is for young people starting out and older people wanting to downsize into smaller properties. Neither is well catered for in Cheriton.</li><li>• We support new housing to be dispersed through the community rather than focused in Winchester or creation of new settlements.</li><li>• BUT we need to protect sites of environmental importance, especially in the SDNP. Areas such as the River Itchen SSSI and its environs, ancient woodland (eg Cheriton Wood), Cheesefoot Head should be given special status to preserve them for future generations.</li></ul> <p>Vibrant Economy</p> <ul style="list-style-type: none"><li>• Need to improve broadband infrastructure in rural communities to enable working from home.</li><li>• Need to protect rural businesses and organisations e.g. village shops, pubs and churches.</li><li>• Promoting buying local and supporting local entrepreneurs is important. Seasonal eating is also a good way to curb the carbon footprint but one would need support from shops/suppliers/farmers and development planners.</li></ul> <p>Sustainable Transport</p> <ul style="list-style-type: none"><li>• Ensure that rural communities are also supported to improve walking and cycling opportunities- Cheriton has fast through roads, including fast cyclists, making walking dangerous.</li><li>• Consider focused rural bus services (eg Cheriton to Alresford and return at sensible times).</li><li>• Need to incentivise moving to electric vehicles.</li></ul> <p>Living Well</p> <ul style="list-style-type: none"><li>• Local councils should find ways to change the high streets to allow for pedestrians only. Planting avenues of trees, have more seating and make it a more friendly with more open space (of course unsociable behaviour would also need to be tackled). This is an opportunity to reduce emissions, improve air quality, noise reduction and safety. Bishops Waltham is a really good example of this as well as Jewry Street in Winchester; Alresford could possibly do something similar. Winchester could improve on their Park &amp; ride system to encourage more</li></ul>
--	---

	<p>people to park outside of the centre. The traffic plans being progressed between Cheriton and the SDNP provide some useful ideas for Cheriton and other villages blighted by traffic. Keeping speed down (less than 20mph) and making village centres less friendly for vehicles is a must as the population in the South East continues to grow.</p> <ul style="list-style-type: none"> <li>• Support in principle the concept of 15 minute city.</li> <li>• Support for allotments to enable people to grow their own</li> </ul> <p>Infrastructure</p> <ul style="list-style-type: none"> <li>• Important to consider infrastructure across boundaries particularly where infrastructure is shared with the National Park.</li> </ul>

## Sustainable Development Objectives

**1: Do you agree with the sustainable environmental development objectives? Please tick all that apply.**

**Do you agree with the sustainable environmental development objectives? - Positively contribute to achieving a carbon neutral district by 2030 through appropriately located development, good connectivity and sustainable design**

Option	Citizenspace
Agree with the objective?	261
Agree that the objective reflects the key issues that are facing the district?	150
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	149
Not Answered	291

**Do you agree with the sustainable environmental development objectives? - Reduce the number of places that experience poor air and water quality. Reduce waste and exceed current recycling targets**

Option	Citizenspace
Agree with the objective?	291
Agree that the objective reflects the key issues that are facing the district?	151
Agree that the objective supports the fundamental aim of the	135

Local Plan to achieve carbon neutrality?	
Not Answered	270

**Do you agree with the sustainable environmental development objectives? - Enable communities to respond and adapt to the effects of climate change ensuing that development is appropriately designed and located and can be adapted**

Option	Citizenspace
Agree with the objective?	275
Agree that the objective reflects the key issues that are facing the district?	142
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	132
Not Answered	283

**Do you agree with the sustainable environmental development objectives? - Ensure that development provides biodiversity net gain, and does not increase the loss of habitats or the risk of flooding and overheating**

Option	Citizenspace
Agree with the objective?	296
Agree that the objective reflects the key issues that are facing the district?	151
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	129

Not Answered	268
--------------	-----

**Do you agree with the sustainable environmental development objectives? - Require development to be resilient to climate change challenges, innovative, energy efficient, sustainably constructed and designed and meet health and well-being needs**

Option	Citizenspace
Agree with the objective?	290
Agree that the objective reflects the key issues that are facing the district?	138
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	141
Not Answered	282

**Do you agree with the sustainable environmental development objectives? - Promote and encourage use of renewable energy sources to power new developments**

Option	Citizenspace
Agree with the objective?	281
Agree that the objective reflects the key issues that are facing the district?	142

Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	147
Not Answered	279

**Do you agree with the sustainable environmental development objectives? - Strengthen and create healthy communities that are connected, with easily accessible open spaces and green / blue infrastructure, and support sustainable travel choices including walking and cycling**

Option	Citizenspace
Agree with the objective?	285
Agree that the objective reflects the key issues that are facing the district?	139
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	141
Not Answered	282

**Do you agree with the sustainable environmental development objectives? - Promote development that is innovative, energy efficient and appropriate to the local surroundings**

Option	Citizenspace
Agree with the objective?	286
Agree that the objective reflects the key issues that are facing the district?	140
Agree that the objective supports the fundamental aim of the Local Plan to	129

achieve carbon neutrality?	
Not Answered	275

**If you disagree with the sustainable environmental development objectives, please explain why:**

<b>Respondent Number</b>	<b>Respondent Comments</b>
C2	I think that there is an over-emphasis on the sustainable environmental development objectives. The district covers both urban and rural settlements, whose needs are distinctly different. Great care needs to be taken with these objectives to ensure that they are real, and not simply the current fashion.
C5	I agree that new development should be energy efficient. Achieving Carbon Neutrality in the whole district by 2030 is pie in the sky. WCC will struggle to get all of its properties carbon neutral by that time, without the rest of the building it doesn't own.
C7	I agree with all of the above, but just by shoehorning in reference to carbon neutrality in all statements feels a poor way to do it. Equally it also carries the risk that carbon neutrality will override focus on other important areas (such as air & water quality and biodiversity) .
C8	As stated earlier, there is no climate emergency. Get real and stick to traditional local authority functions such as emptying the bins and sweeping pavements etc.
C10	Make sure drivers are not disadvantaged. Many people rely on cars so don't make it difficult for them to travel
C17	I very much doubt that acheiving carbon neutraqlity throughout the distict within nine years is possible.
C23	The objectives are very generally worded, and most of them fail to include any specific measurable target of what the Plan is seeking to achieve - they work as general statements of intent, but need more detail. There is no mention in the objectives of delivering solutions to the Solent SPA Nitrates issue, necessary to unlock new development across the District. I don't agree that seeking carbon neutrality has been justified as the single over-riding objective that all other objectives must align with.
C31	There has been too much building in the area already. The healthiest proposal would be NO MORE BUILDING, especially on Greenfield sites like Hursley.
C36	I agree with all of the objectives . 1. Fundamental to soundness is sharing of own & overspill development from National park, Gosport, Havant,

	<p>Portsmouth &amp; Eastleigh with WCC. No evidence is provided.</p> <p>2. There is huge backlog of housing provision. No evidence is provided on its size &amp; no objective to eliminate it. The backlog has resulted in gross overcrowding by 2 households living in dwellings with insufficient bedrooms making it the top plan issue because of its impact on mental health particularly of the poorest in the smallest dwellings</p> <p>3. The most sustainable development is top quality high rise catering for the poorest &amp; those trading down thus releasing under utilised dwellings to accommodate growing families. Manage by a residents' committee to make it an economically mixed community. Include gym, hairdresser &amp; nail bar for residents also open to the public, Set in landscaped open space large enough to include facilities for all ages also open to the public . If located at the settlement edge the size of the community would be enough to attract rural &amp; inter urban buses.</p>
C40	<p>I disagree because in many of the points you include weasel words to permit you to do what you want in preference to the first stated aim.</p> <p>I far prefer what Oliver's Battery PC has put forward as "option 5"; which is essentially give priority to brown field and infill; and enforce preservation of countryside around Winchester. One gone, lost for good.</p>
C54	<p>1. Developments should not only include 'sustainable design' (whatever that means) but should include buildings which are zero-carbon in construction and in operation. Such buildings may (should) last for up to 100 years.</p> <p>2. What waste has the most climate impact? It would be better include a hierarchy of waste, e.g. food over garden waste, and of re-cycling targets e.g. steel over aggregate over glass.</p> <p>3. Typo! Ensuring and NOT ensuing. See comment 1. above.</p> <p>4,. '.. not increase loss of habitat'. Does this mean adds to habitats?</p> <p>5. Sustainable construction and design does NOT ensure zero-carbon operation (see comment 1). More clarity of language required.</p> <p>6. Why not 'Require' instead of 'Promote and encourage'?</p> <p>7. What does 'sustainable' mean and in which context e.g. over what distances? Again, lack of clarity in language.</p> <p>8. Repetition. 'Innovative' and 'energy efficient' already mentioned in part 5.</p>
C57	<p>Candidly, I believe that piecemeal objectives formulated on a city-by-city basis such as this result in limited local initiatives such as more cycle lanes. Far, far more effective - but probably beyond the scope or ambition of local authorities - would be, for example a single, consistent national policy towards the collection and disposal of household waste.</p>
C58	<p>There is nothing to disagree with here.</p>
C59	<p>Development should only be on brownfield sites. Other wise you will be robbing Peter to pay Paul when you look at balancing biodiversity and climate change .</p>

	Loss of habitat of green field rural land should be avoided at all costs . The world is changing and we need to act now. To protect the future We don't need Micheldever new town or Royaldown development now or ever.
C60	I lot of the impacts are way outside of WCC's influence
C95	agree with objectives but these are not met when development still occurs on flood plains
C101	Grand aspirations. Unlikely to be realised.
C103	The Council does not disagree with the objectives, but find that the questions that you pose lead us inevitably to the answer that you seek.
<b>C116</b>	The comment has been removed as the respondent requested their response not to be published
C117	I agree with the objectives, especially where recycling is concerned. Not enough of our waste can go into our recycling bin and the skips are not freely accessible, without booking, which they should be.
C125	A key objective of the current plan to build thousands of houses in Micheldever station and in the middle of the countryside is not an acceptable option for accommodating Winchester's housing needs. Here are some of the reasons why: The Council should look to build on brownfield and previously developed land has a much lower impact on the environment. With massive and growing development on our doorstep at Basingstoke, it is crucial that Micheldever station remains as a green buffer if we are to avoid an urban sprawl between Basingstoke and Winchester.
<b>C132</b>	The comment has been removed as the respondent requested their response not to be published
C136	Energy much be also placed on making pre- existing buildings and houses to update them to modern standards
C144	too many objectives.
C146	Re promoting and encouraging use of renewable energy, I would only agree with methods that were in keeping with the surroundings. wind power and solar power can be visually intrusive.
C149	Agree but do not see this happening in current local developments.
C163	I don't disagree but would like to add that established green corridors for instance in gardens should be maintained and this should be considered when considering in-fill developments. Just one house in a back garden can effectively break the corridor and undo the objective of maintaining and encouraging biodiversity.
C170	I agree totally with the objectives. I am however very disappointed by the response from the local Environmental Agency and Environmental Health officials who have been gullible and inept when responding to reports of sewage pollution in Heath Road,. They have insisted that the pollution is as a result of surface water, even when it hasn't rained for weeks.

C185	The comment has been removed as the respondent requested their response not to be published
C186	It is impossible not to agree with such general objectives. Proper comment needs an understanding of the performance measures that will be used to determine if a development proposal meets or undermines the objectives. These measures also important when considering proposals which meet some but not all of the objectives.
C187	Reducing localised pollution and climate change adaptation is a worthy and important objective but does not necessarily mean a reduction in carbon emissions.
C189	There should be a box to tick to disagree with the above questions. a'loaded' presentation
C190	My only real concern is with the prevalence of sites handed to the Hampshire & Isle of Wight Wildlife Trust. Whilst their priority is, of course, wildlife, in my experience this has been achieved at the detriment to public accessibility. For example in Barton Meadows, the community was excited at the thought of more open space. But actually we don't have any more open space, just poorly-maintained tightly fenced footpaths which are difficult to navigate for 6 months of the year. The same is true of Nuns Walk. Both of these could be places where wildlife and people share the space, where there are benefits to both. However in dealing with HIWWT they are incredibly resistant to making these spaces more pleasant for people who want to engage in active travel or exercise - two key pillars to loving where you live. A better balance can be found.
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.
C198	It is not clear what carbon neutrality for the district in 2030 means. Is this just the activities of the council? The activities of the population as a whole? The former could be achieved but at a risk that the latter increases. Is there a holistic view? Similarly how is sustainable design defined. Does this term mean anything? It is often used to mean different things. Any green field development is unlikely to meet these objectives as by definition the development will mean more people, more need to travel (especially if more than 2 miles from the centre of town), more use of resources, etc. I would like to think about what size city should Winchester be: an increase in 25% population may be acceptable and even good but we should set out the overarching aims so people accept that some "development" will be needed.
C201	The comment has been removed as the respondent requested their response not to be published
C207	While I understand the environmental challenges, I am concerned that a narrow focus on pursuing zero carbon will have a negative impact on other more pressing social needs (affordable housing, job retraining, supporting vulnerable families).

C216	Sustainable travel choices should be just that - CHOICES. For many people the car is something which cannot be ignored. I speak as a keen walker and cyclist - but growing older and not able to walk or cycle always. The car cannot and should not be banned from the City.
C224	THIS SECTION IS A DISGRACE IT MAKES NO PROVISION IN ANY SECTION TO STATE THAT THE OBJECTIVE DOES NOT MEET ANY OF THE ABOVE.
C228	2030 date is unrealistic
C234	Difficult to disagree with principles it is how they are implemented that is important
C236	Carbon neutrality is very important, however, should not be the only environmental criteria to test against. The local plan provides an opportunity to rectify previous environmental damage through, for example, encouraging use of brownfield and previously built on sites in the first instance and should be used to encourage such initiatives.
C238	WE SHOULD BE CONCENTRATING ON MATTERS THAT DIRECTLY AFFECT PEOPLE, NOT VIRTUE SIGNALLING WHEN WINCHESTER IS A TINY PART OF A TINY COUNTRY AND WILL HAVE NO EFFECT GLOBALLY
C241	I do not believe that the Council can achieve a carbon neutral district by 2030. IT is wrong to claim carbon neutrality when carbon offsetting is used to balance the books.
C246	Not to promote development per se
C248	To endeavour to meet the ideal aims of Carbon neutral by 2030 is unrealistic and a too shorter time period to allow such a fundamental change to take place . We now live and operate in a different world- post and Existing Covid Lockdown and restrictions . Planning development for neutrality requires longer term approach to change and to rush the change in this time scale is not achievable . Greater influence should be made to existing structures including housing stock It is necessary to protect the Countryside environment 1. This has be any bodies view !-a negative impact on the carbon impact - Countryside / Green belt / important gaps dividing settlements open areas once build over it will be lost forever and that impact will be substantial 2 . There is the need to develop on land which is already developed and which development density for example could be improved upon . - ie Brown field Sites whose impact on existing environmental is already negative and requires improvement
C255	I find it difficult to answer the above with any precision because there are no quantifiable targets for each area and I do not feel that I have been sufficiently informed and engaged to know HOW you intend to achieve carbon neutrality and BY WHEN and HOW I could play a part in this as a citizen. More work on target setting and engagement would seem to be important.

C259	I agree that we need to strengthen and create healthy communities that are connected, with easily accessible open spaces, but promoting walking and cycling on the relatively narrow streets of Winchester, at the expense of public and private transport, discriminates against those people who are reliant on such transport, particularly the elderly, disabled or infirm. So I do not agree with policies which make it harder for people for whom cycling and walking is not a viable option. As electric vehicles become more mainline, this is a preferred way forward, but policy should be one of enabling, not 'forcing'.
C260	Agree with the fundamental principles but as the Local Plan proceeds, greater consideration needs to be given to the applicability to different developments. As an example, King's Barton is now an historic planning permission where viability, and the range of planning obligations to be included, was assessed at the time. Careful consideration needs to be given to such climate emergency adaptation measures to ensure the ongoing viability of the development, especially where there is already a considerable committed burden as at King's Barton.
C273	A sustainable environment is primarily an issue of World resources and their conservation. A (ot the) primary issue is human population. A local plan for increasing population is contradictory to a sustainable environment. On climate change and air quality, WCC is already of set mind, as evidenced in the framing bias of of the questions above.
C274	Where is Mother Nature and Apple Pie in your list? These are all, of course, worthy objectives . IF new housing is put on Green field sites and Brown field sites are left undeveloped or with unsuitable /needless use by commercial warehouses then the OBJECTIVES will not have guided the plan.
C290	The number of houses is excessive . Fly tipping has increased significantly during Covid which I believe is due to the recycling centres having appointment only visits. Also surely it would make sense for either HCC or WCC to have responsibility for both the recycling centres and removal of fly tipping rather than divide these services between the two. I believe that HCC and WCC could combine and help reduce or poll tax . Our bin collection is not as frequent as in Portsmouth and yet our rates are higher!
C293	While we would support the majority of these objectives, the environmental objectives do not sufficiently take account of the need to protect our valued natural environment and landscapes with the district. The commitment to carbon neutrality, whilst welcome, should not overshadow the need to enhance the wider environment and protect biodiversity, which goes much wider than biodiversity net gain. There is the potential for mutual benefits e.g through

	tree planting. Equally, the maintenance of highly valued rural landscapes across Hampshire should continue to be a priority.
C299	No mention of water resources, relative to chalk stream system safeguards.  All the thoughts about transport ignore the relatively mobile. Age 84, drives a car, but not too far. Does not qualify for blue badge. Certainly not going to restart cycling now. Must have car for getting around. Not willing or able to be locked up at home by the idealistic ideas of much of the present range of proposals.
C306	What plans are in place to monitor all of these? Too many, too ambitious, too vague.
C308	The term "appropriate to the local surrounding" should not be an excuse to prevent all new development from the inclusion of renewable energy. All new builds should have solar or another renewable as part of the planning approval.
C313	Travel choices are not easily reconciled. If cyclists get priority businesses will suffer as purchases will be limited and trade dependent on good weather. Walking is similarly only desirable for part of the year, leaving large pedestrian areas empty when it rains. Covid has shown how problematic shared public transport can be and future health concerns may require it to be totally phased out.
C315	Bargate Homes consider that achieving a carbon neutral district by 2030 is unrealistic and is likely to lead to setting requirements for the residential development industry at onerous and unviable levels. This is explained further in the following section of this questionnaire.
C316	These are great words - I wonder whether they will be actioned.
C321	Objectives need hard targets otherwise I believe they are just words. We shouldn't be going for carbon-neutral, we should be going for carbon negative. There is already too much carbon in the atmosphere. If we stopped fully emitting carbon today, climate change would continue to accelerate for another 20 years. We need plans in place that suck more carbon out of the atmosphere than put it in. Waste and recycling targets are not enough, we need to build a business model that encourages circular economy so there is no waste at all. I would love to learn more about biodiversity net gain. Biodiversity is the second biggest issue humanity faces behind climate change and the UK is the worst country in the whole of Europe for it has lost 70% of its biodiversity in the last 70 years. Around 65% of business depends solely on what biodiversity has to offer including being a carbon sink. How are you planning 4500 new houses to be built on land whilst ensuring you have a net gain in biodiversity?

C326	Aspiration is a wonderful thing, but credibility is something else. For example Ground source energy may be too costly, and not viable at household level, but maybe a good option for larger buildings which should have 'green roof structures' whenever possible.
C329	Agree with all the statements - BUT UK policy has been saying much the same for years - what is going to make this Local Plan any different to the many failed existing policies.
C336	Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.
C342	There needs to be more emphasis on retaining and increasing green space to provide a greater biodiversity and access to surroundings conducive to a healthy lifestyle
C343	We would like to amend the sixth objective to: 'promote and encourage all renewable energy sources, not only to power new developments, but also to provide zero-carbon energy for both local communities and to decarbonise the district's fuel supply.' We would like to add to the 'biodiversity' objective by adding to 'net gain' ... e.g. through soil improvement measures and rewilding. We would like to add to the 'healthy communities' objective words 'with easily accessible open spaces and green / blue infrastructure' and places for local communities growing their own food.
C344	The comment has been removed as the respondent requested their response not to be published
C347	See answer to Q4 in this section • The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock. • Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence. • There are too many objectives, many unmeasurable, which are repetitive and could be much simplified
C348	See answer to Q4 in this section • The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock. • Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence. • There are too many objectives, many unmeasurable, which are repetitive and could be much simplified

C352	<p>Disagree with the objective that we need to achieve Carbon Neutrality by 2030. This is unrealistic (as 70%+ responded in your online Slido poll). It is 20 years ahead of national requirements, doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan is made, does not allow time for a considered implementation plan and could create easy but poor decision making, such as using inappropriate countryside for wind and solar farms to offset carbon emissions in order to facilitate 'achievement'. Development should not, at its most basic level, involve the avoidable loss of countryside to achieve carbon neutrality.</p> <p>Our rivers are not mentioned and are at increasing risk of being depleted and contaminated with nitrates, such that even local, small scale building was recently halted. What is proposed to cope with this?</p>
C353	<p>I don't disagree, but this is a huge agenda and some of it may not be under council control. For example, to be effective in realising this agenda the council will need to influence key stakeholders such as developers, farmers and landowners.</p>
C355	<p>I have concerns that those who with disabilities through aging and illness will be excluded from and furtger be restricted by inaccessible transport in the name of environmental sustainability</p>
C356	<p>They cannot stand in isolation. They are important parts of the joined-up thinking that represents planning. If you insist on ignoring the other issues then you will reduce the ability of the district to grow.</p>
C362	<p>I agree with the objectives but not sure current development plans support the objectives</p>
C365	<p>I would like to strengthen the sixth objective to make it easier for people to get planning permission for facilities such as battery farms, solar panels, turbines both large and small to help replace fossil fuels in heating systems with locally produced clean energy. Perhaps add "and building upgrades."</p>
C375	<p>While these objectives are obviously sensible, I am concerned that support for them might be used to justify a large new green field development. Major redevelopments on green field sites are irreversible. They should not be viewed as 'sustainable' any more than other destruction of natural habitat. Furthermore a development such as Royaldown, despite being sold on its environmental credentials is most unlikely to deliver the promised benefits. Reliance on private motor vehicles to cover the significant distances to essential transport links and other amenities is an obvious example.</p>
C378	<p>Carbon neutral district by 2030 is a self indulgent, expensive white elephant.</p> <p>The pen-ultimate above should include viable transport choices to and from the place of work. Walking is very limited and cycling is unrealistic for those doing a 'proper' job.</p>

C382	<p>While I support the objective to be carbon neutral as early as practically possible, and I support the Government's target of 2050, the plan to be carbon neutral for the District by 2030 is admirable but is not practical and potentially will have negative consequences.</p> <p>Given that the country voted for a Conservative government that has set a National target date of 2050 to become carbon neutral what mandate is there for this radically different target date for this District ?</p>
C388	<p>I agree with all the above. - but these laudable objectives need to be more than just words. The decision to approve the truly awful development at Barton Farm in terms of the housing design, sterile environment, biodiversity loss, lack of renewable energy-producing technologies etc is beyond understanding. All future developments, including the remaining phases of Barton Farm, MUST be of a much higher environmental standard and be far more sustainable places to live.</p>
C392	<p>not renewable energy if it means ruining countryside with vast solar farms</p>
C394	<p>There is too much emphasis on development. We need to make sure we get the most we can from existing development before we plan for more, especially as the national population forecasts a downward trend in the coming decades.</p>
C398	<p>the objectives are sound... just not sure how building on green fields / farm land achieve these unless the aim is to invest in off setting initiatives elsewhere leaving the direct negative impact of further development to be borne by locals.</p>
C416	<p>We can all have dreams but plans need to be affordable and understandable. Lots of grand ideas here but are they realistic? If this is such a wonderful plan why has it been left till 2021 to put in place?</p>
C428	<p>Carbon neutrality is important but is not the only environmental criteria to test against.</p>
C429	<p>There are several missing:</p> <ul style="list-style-type: none"> <li>• Making the best use of land, utilising previously developed land first.</li> <li>• Minimising land take by maximising density.</li> <li>• Minimising embodied carbon by maximising existing buildings and infrastructure.</li> <li>• Recognising that countryside has a significant role to play in achieving carbon neutrality, flood prevention, air and water quality and using a natural capital approach to valuing this contribution.</li> <li>• Recognising valued landscapes.</li> <li>• Maintaining and enhancing networks for nature connectivity.</li> </ul> <p>I believe objective number 1 should be strengthened. The single largest contributor to carbon emissions will be any car-dependent greenfield development, and this spatial element to the objectives must be made clearer.</p> <p>The objective on renewable sources of power is unclear on its range and remit. I agree that all new development</p>

	<p>should have solar roofs, wastewater harvesting, energy efficient design, but I do not agree with large industrial scale windfarms or solar farms in the countryside. All new warehouses and business premises should have renewables integral to their design, especially solar roofs.</p>
C437	<p>I find that the objectives are acceptable but Winchester is failing to develop these in the smaller villages. These have no public transport, no amenities to use and when these issues are raised by the smaller villages; are dismissed because they are not what Winchester wants to hear . This is particularly relevant to environment where so may sewage issues are ignored. Local people do not comply with sewage and drainage regulations and flout the law and yet nothing is done to prosecute or plan to overcome these issues. They are major pollution of the local environment and water courses. A serious consideration should be to either uphold the law or put in proper drainage systems such as main sewers to prevent this contamination. What is the point of having these objectives which comply with all your targets if elsewhere pollution and contamination is rife.</p>
C439	<p>Strongly disagree with the objective that we need to achieve Carbon Neutrality by 2030. This is unrealistic (as most participants responded in your online Slido poll). It is 20 years ahead of national requirements. It doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan is made. It does not allow time for a considered implementation plan and could create easy but poor decision making, such as using inappropriate countryside for wind and solar farms to offset carbon emissions in order to facilitate 'achievement'.</p>
C445	<p>Need to be realistic about carbon neutral by 2030.          What is not clear is what does Carbon Neutral look like. There will be many areas that cannot physically achieve this unless addressed. Winchester will also heavily rely on outside organizations to also be carbon neutral such as energy supply. How does the plan timeline align to these.          Once it is clear what Carbon Neutral for Winchester means, then it becomes clearer to prepare a roadmap to achieve this.          One important area is addressing the inefficiencies of existing aging infrastructure and buildings. These are massive energy users.          Another area is education - teach or persuade people to be more energy aware and efficient in their use of that energy.          It is missing several important factor</p>
C461	<p>I agree with the objectives but do not have sufficient understanding to comment on if they reflect the key issues that are facing the district or if they support the fundamental aim of the Local Plan to achieve carbon neutrality.</p>
C463	<p>I do not see how the development of housing estates such as Barton farm and Royaldown can help achieve any of these objectives.</p>

C464	<p>Carbon neutral by 2030 is not a realistic objective and would be a disaster if reached by damaging other vital aspects of the environment - eg carpeting agricultural land with solar panels which a]cover far too much land in relation to energy produced in this climate b] damage land that is visually, recreationally and environmentally important c]require too much energy resources to build relative to output.</p> <p>Objectives must be balanced.</p>
C469	<p>Why then on the very simple matter of cycling are cycle lanes not part of new developments? The council may idealise (may dream), but current developments are not achieving these ends. Developers must pay more for infrastructure and must improve the quality of developments which are poor. The council has a responsibility to ensure that new private homes are of good quality and presently they are wholly inadequate based on outdated provisions eg. they are not innovatively energy efficient.</p> <p>The Local Plan is not sufficiently robust so there is no evidence that it could possibly meet carbon neutrality. The plan must define precisely how carbon neutrality is to be achieved every step of the way, every means of assessment at defined points in time.</p>
C471	<p>I am not sure that these aims are at all realistic and might result in a box ticking exercise rather than useful and practical solutions</p>
C475	<p>There is imply too much housing eating up our countryside</p>
C479	<p>The plan for Swanmore and Waltham Chase reduces the chance of green spaces by substantial built up areas on what is now green fields, with a space between Swanmore and Bishops waltham.</p> <p>As an industrial chemist I am not sure there is such a thing as sustainable environmental development however well the intentions may be.</p> <p>I suggest nuclear power would be more sustainable. (As an ex atomic energy employee from the 70s)</p> <p>The field I have known and walked around for nearly 70 years has marsh land at the bottom end and I suggest not suitable for housing without major works. This would change the character of the old green belt area, making deer, badgers and other wildlife homeless.</p> <p>The deer come into our garden, the badgers seem to be at the bottom, last time I saw one close was across the road, dead.</p> <p>Sustainable travel such as cycling and walking is not possible for disabled and elderly people.</p>
C480	<p>I am uncertain about the 2030 deadline. It is very ambitious, exceeding the national deadline by 20 years. It would be wonderful, if it proved achievable. However, it is important not to narrow the scope of the objective or pursue actions that would be unsustainable in the longer run, just to meet the deadline. For example, the pursuit of carbon neutrality should not unduly impact on the essential character of Winchester or overshadow the other important objectives,</p>

	such as preservation/increase of biodiversity (which can - but does not necessarily - go hand-in-hand with the pursuit of alternative energy sources, energy efficiency, etc.). In addition, insofar as the climate change challenge might require some dramatic changes to the way we live, it will be important to be mindful of specific concerns or general reticence of some inhabitants of the district and to make sure they come on board, which could take time.
C482	The questions are posed in a way to deliver a particular result. Very poor crafting from a Market Research pov and an outrageous abuse of the consultation process. Were these reviewed by a market research society accredited person? Where is the opportunity to say maybe or partly.
C491	I am suspicious that there is no appreciation of the impact of some measures upon those of us such as pensioners who are on restricted incomes. The University is being allowed to develop without restraint. Its expansion is leading to felling of trees and destruction of wild spaces. More housing is having to be built as result of student accomodation taking units out of the current stock, more land is therefore being lost. I would like to see sustainable objectives followed but this has not been my experience of council policy so far.
C494	I would comment that 2030 is less than 9 years away and these are ambitious and probably unrealistic objectives to achieve in this time framework. Fundamentally unless you are an environmental consultant or the like, with all the information available, you cannot answer the second and third options of this question with authority
C498	Any policy document that supports the building of 1000's of extra dwellings that are not needed and destroy green belt land cannot be related to sustainable objectives.
C514	The detrimental impact on the existing residents of the area.
C516	Generally agree with objectives BUT 2nd point needs Add to improving poor air and water quality, improving the quality of the land and soil, in order to grow high quality food, and address issues, such as climate change and biodiversity.  There needs to be specific objectives based around food. Under healthy communities these should refer to communities being enabled to access good food, and development that requires sustainable food infrastructure, protecting natural ecosystems and resources, promoting high animal welfare standards, reducing food miles, packaging and waste, and increasing composting and recycling. Also communities should be enabled to grow their own food.  The specific inclusion of access to good food and sustainable food infrastructure will help to achieve the other objectives of addressing issues of waste and recycling, enabling communities to respond and adapt to climate

	<p>change, achieving biodiversity net gain, and creating and strengthening the resilience of communities to climate change.</p> <p>In order to strengthen and create healthy communities, people will need easily accessible places to grow their own food.</p>
C523	<p>Although I believe saving energy is a good thing, and improving the local ecology and natural environment is also a good thing, as I believe the 'Climate Emergency' is an invalid concept, I disagree with most of the above objectives. My 'belief' is based on informed opinion and I have submitted a paper to the Council's Planning Policy mailbox which shows, using readily available empirical data (as opposed to flawed computer generated data), that this so called 'emergency', which has been coming for 40 years and does not represent any immediate threat, is largely the result of flawed computer models.</p>
C528	<p>It is difficult to disagree with these positive and laudable objectives. However, quite often these issues also need to be balanced with other important social and economic objectives of supporting new homes and employment opportunities in and adjoining existing settlements that are both viable and deliverable.</p>
C532	<p>Healthy communities also need access to "good food"; both in terms of retail and the ability to grow locally. All new developments should have community growing spaces.</p> <p>There also needs to be promotion of activities to tackle issues of waste and recycling which will also enable communities to respond and adapt to climate change, achieving biodiversity net gain, and creating and strengthening the resilience of communities to climate change.</p> <p>Sustainable food (production &amp; retail) needs to be included alongside water, energy and transport in resilience and climate change adaptation planning</p>
C535	<p>Whilst not disagreeing with the objectives as set out the Winchester Food Partnership think the following points should apply:-</p> <ol style="list-style-type: none"> <li>1. There needs to be specific objectives based around food. These should refer to communities being enabled to access good food, and development that requires sustainable food infrastructure, protecting natural ecosystems and resources, promoting high animal welfare standards, reducing food miles, packaging and waste, and increasing composting and recycling. Also communities should be enabled to grow their own food.</li> <li>2. The specific inclusion of access to good food and sustainable food infrastructure will help to achieve the other objectives of addressing issues of waste and recycling, enabling communities to respond and adapt to climate change, achieving biodiversity net gain, and creating and strengthening the resilience of communities to climate change.</li> <li>3. In order to strengthen and create healthy communities, people will need easily accessible places to grow their own</li> </ol>

	<p>food.</p> <p>4. Please add to 'improving poor air and water quality', improving the quality of the land and soil, in order to grow high quality food, and address issues, such as climate change and biodiversity.</p>
C539	<p>Your primary and central objective is climate change focused. I believe the country and the world needs to address the issue but I believe strongly that is not WCC's primary role.</p>
C540	<p>TWSL consider that achieving a carbon neutral district by 2030 is unrealistic and is likely to lead to setting requirements for the housing development industry at onerous and unviable levels. This is explained further in the following section of this questionnaire.</p>
C542	<p>1. What do you mean by "carbon nutral by 2030"?</p> <p>(i) The council has no control over the energy mix delivered to the area through the national grid, and some limited control over what is added to the local distribution network, so it would be difficult to show real carbon neutrality in primary energy consumption;</p> <p>(ii) Do you include embodied emissions - almost certainly not as it would be impossible to reach carbon neutrality over the next decade if you did;</p> <p>(iii) What about supply chains? Will you measure the carbon in goods imported into the region from elsewhere including goods made overseas in countries with "dirty" energy mixes (eg China whose use of coal generation is still increasing at a rapid rate);</p> <p>(iv) Offsetting schemes are largely discredited and should not be used to demonstrate carbon neutrality. Taking these factors into accout it seems highly unlikely that carbon neutrality can be achieved in any meaningful way over the next decade, and so the target should be modified to avoid misleading local residents;</p> <p>2. Plans to expand the use of sustainable travel focusing on walking and cycling too often ignore the needs of disabled residents. These needs include</p> <p>(i) Accessibility: the set of people requiring vehicular access to town centres is greater than just blue badge holders. There is a wide range of disabilities and medical conditions that reduce people's mobility and many of these do not meet the stndard for a blue badge while still being very debilitating.</p> <p>(ii) The promotion of cycling and walking often creates risks for pedestrians. There is no legal requirement for cyclists to pass any proficiency test or demonstrate any knowledge of the Highway Code. This leads to anti-social and dangerous behaviour by cyclists, in particular riding on pavements, jumping red lights and ignoring the priority pedestrians have when crossing side roads. In some shared paths along the Thames in London, barriers have been installed to force cyclists to slow down in order to keep pedestrians safe. The likely introduction of electric scooters</p>

	<p>will exacerbate these issues, with many scooters already being ridden illegally on roads and pavements.</p> <p>(iii) Access for emergency services needs to be maintained. There are many reported instances where changes enacted under emergency powers over the past year have increased response times, with emergency services reporting lack of consultation on the part of councils.</p> <p>(iv) Care needs to be taken to ensure that pavements remain free from obstacles that present risks to the visually impaired.</p> <p>(v) There needs to be adequate provision of toilet facilities to meet the needs of the disabled.</p> <p>3. The de-carbonisation of buildings is a significant challenge.</p> <p>(i) Embodied emissions and lifecycle emissions must be considered for all new developments.</p> <p>(ii) Reliance SHOULD NOT be placed on the out-dated EPC scheme. This is important, since the EPC methodology contains features that will make it impossible for some properties to achieve an EPC of C or above</p> <p>(a) The EPC assume buildings are in perfect condition: broken double glazed windows score more points than perfect single glazed windows despite having higher heat losses;</p> <p>(b) The EPC penalises electric heating heavily unless certain expensive models of air-source heat pumps are used (ASHP have a number of disadvantages including noise, low efficiency at low temperatures, the need for larger radiators to maintain comfort levels and often the need for supplementary heating)</p> <p>(c) The EPC ignores features of buildings the assessor cannot see, so if under-floor insulation is present but not exposed for inspection, it receives no credit</p> <p>(d) EPC reports often contain recommendations that are impossible to meet eg installation of external cladding on listed buildings</p> <p>(e) Some recommendations create adverse effects: cavity wall insulation creates moisture bridges leading to condensation and mold;</p> <p>(f) The EPC is a passive exercise which does not measure actual heat losses from buildings. Thermal imaging testing is not included, but should be.</p> <p>(iii) New buildings should be designed to have low heat losses without compromising ventilation, and should include flexible energy assets where possible. In new developments, collaboration with energy suppliers should be considered to deliver energy as a service, using these flexible assets, together with time-of-use pricing to optimise costs for consumers as well as environmental benefits.</p> <p>(iv) Minimisation of waste should be at the heart of the policy both in terms of heat losses and materials.</p>
--	--

	<p>4. The objectives described are repetitive and contain many statements that sound good but mean little in practice. What do you mean by "resilient to climate change" or "allowing communities to respond to climate change"? Do you expect the Winchester area to be particularly vulnerable in some way, or are you simply attributing any "unusual" weather events to climate change (which is a false premise since, statistically, many of the weather events which are attributed in the press to climate change are not in fact that unusual). In any case, goals such as these are ill-defined and will therefore be difficult to meet in any meaningful way. The goals should be clear, precise and measurable in order to have any real benefit. The objectives should be streamlined to make them more coherent and clearer.</p>
C543	<p>We believe that workplaces should be promoted in areas of high unemployment or those having good travel links to reduce the need to use private vehicles for work. We also believe that commerce requiring HGV traffic movements should only be located at or very near to major road intersections to reduce the impact of traffic on rural communities.</p>
C549	<p>It is important that it is understood that agreeing with objectives does not of itself imply agreement with all means of achieving those objectives.</p> <p>In particular industrial-sized renewable energy projects might meet the objective of renewable energy generation for a large area, but may not meet the needs of a more local community, may compromise other equally important objectives, and may be dependent upon ageing technologies, which may soon be superseded.</p>
C554	<p>Strongly disagree with the 2024 Winchester and 2030 District requirement for Carbon Neutrality. This is overly ambitious and does not allow for for the 2036+ Local Plan initiatives or new technology coming forward. Where did this date and proposal come from - was there a public consultation? It appears in this consultation that these dates are a 'given' which makes it seriously skewed if not flawed.</p>
C555	<p>The scale of Royal down is completely out of proportion to the existing settlement. It will disrupt and completely destroy the quality of life and the way of life of this semi-rural community. Building land designated as Strategic Gap will also create appalling urban sprawl that will effectively join Winchester in a continuous settlement from Kings Worthy to Southampton water.</p> <p>It will put terrible strain on existing services such as water , transport, health and education. It will build over ALL the existing green spaces used by this community , destroy a nature reserve and turn a suburb into an inner-city district. The urban sprawl created by this new development and lack of local public transport will create more pollution not less.</p> <p>It is clear from other developments in Winchester that these houses will not be affordable for the majority of workers such as teachers, nurses and other health staff, middle income IT workers and other technical workers that currently</p>

	<p>struggle to find accommodation in the area and who employers struggle to recruit. Most of the accommodation will be purchased for buy-to let. The plan takes NO consideration of the needs of the existing community, for example: the lack of accommodation for older people who want to remain living in their community, but in smaller units with gardens.</p>
C559	<p>Whilst we support the principle of carbon neutrality in general, we do not believe this should be the fundamental aim of the local plan. Government policy focusses on the broader concept of sustainable development and uses the planning process to strike the right 'planning balance' in decision making around planning applications for housing, employment and infrastructure development. We do not believe the 9 key areas of focus on page 6 of the plan should have climate change at its centre - this would work for the Council's overarching Business Plan, or the Carbon Neutrality Action Plan 2020-30, but not for a statutory local plan. Paragraph 7 of the NPPF 2019 states: "the purpose of the planning system is to contribute to the achievement of sustainable development. The plan making framework, in other words what a plan needs to do, is set out from paragraph 17 et seq of the NPPF 2019. Even the Government's White Paper (August 2020) is surprisingly, many would rightly say sadly, light on climate change objectives. As Boris Johnson states in the Foreword:</p> <p>"Thanks to our planning system, we have nowhere near enough homes in the right places. People cannot afford to move to where their talents can be matched with opportunity. Businesses cannot afford to grow and create jobs. The whole thing is beginning to crumble and the time has come to do what too many have for too long lacked the courage to do - tear it down and start again."</p> <p>This is unquestionably harsh. But the point is that, in this context, a local plan with climate change at its heart risks not being found sound as it is not (currently) consistent with national planning policy. Therefore, whilst we support the overall objective and approach, we feel that the structure set out at pages 6 and 12, with carbon neutrality as an overarching objective, is inherently a very high risk approach for the local planning authority to take to setting a planning policy framework for the Winchester Local Plan.</p>
C561	<p>It should not be just the role of the Local plan to deliver against the climate challenge. Such a small proportion will be down to new dwellings - industry and existing dwellings have a much more significant role to play. Award grants for double glazing and upgrades of older properties.</p>
C566	<p>We find the emphasis on walking and cycling without consideration for elderly people and disabled peoples' needs disconcerting.</p>

C574	<p>These are all meaningless phrases - motherhood and apple pie - everyone can agree they are good things, the difficult bit is achieving them and that is where the plan is inadequate in details of how they can be achieved. You ask me to Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality. more to the point would be to ask if I think that the plan supports the objective. I don't think the plan does actually support any of them to any extent, the plan is all just empty words and the objectives are just empty hopes.</p>
C578	<p>We would add that all new residential developments must provide accessibility/permeability by cyclists and walkers, to avoid dependence on motor vehicles for local journey; and that workplace developments should provide good quality facilities for bike storage/parking, and should be designed with the needs of active travel in mind (eg workplace shower/changing facilities).</p>
C579	<p>How could you not agree with all the above?</p>
C580	<p>In our view to have 23 objectives is simply too many, and to expect 69 answers to this section is, to say the least, ambitious. Many of these objectives duplicate others and fail the SMART test (Specific, Measurable, Achievable, Realistic, Timely). Indeed few of them could be said to be specific to Winchester as distinct from any of the other 350 plus local plans in preparation or in place across the country.</p> <p>The spirit behind the objectives is generally welcomed. However, having said there are too many, there are some important areas which are not covered.</p> <p>There is not an environmental objective that recognises and promotes the quality of the existing landscape, and particularly that nurtures and encourages the connectivity of areas of biodiversity. Should there not also be an objective to protect and increase natural capital? It is surprising that both Green infrastructure and Natural capital are both noted but, uniquely, not addressed in your appendix 3 list of new policies.</p> <p>There is no mention of the absolute need to prioritise brownfield land development over greenfield</p> <p>Within the social objective of meeting housing needs we suggest there needs to be an much clearer emphasis on affordability and the need for a rebalancing of tenures to enable key workers and younger members of the community to find homes and continue to live within the district,. 'Identified need' as quoted in the objective is a slippery concept that could encompass studies that justify market aspirations, for instances for executive homes or housing for rents that are unaffordable.</p>
C584	<p>Do not entirely disagree with these objectives but they lack diversity and imagination. eg. Only source of power is large solar farms in the countryside. No mention of use of roofs of either existing or new buildings. No mention of other alternative sources of green energy.</p>
C586	<p>The second column doesn't always get a tick because I don't see that everyone understands that it is an issue for them.</p>

C590	I don't know what you mean by enabling communities to adapt to the effects of climate change. I also think you need to be flexible when it come to building new developments which create a net biodiversity gain. This is a tall order. Of course we need to be respectful of the environment and do our best to reduce the impact of new developments on the local bio diversity, but we should not limit new developments to net gains in biodiverse terms. Rather a best efforts.
C595	The comment has been removed as the respondent requested their response not to be published
C597	Please see representations made to Planning Policy, submitted in PDF form.
C600	sustainable environmental development objectives are important, but so is creativity and individual thinking. Each development produces homes for people to live in, stimulate ideas and expression and connect with the environment and surroundings. As a nation we are increasingly responding to minority groups that feel they are disadvantaged, by example Gypsies and Travellers who seem to have the benefit of an advantage not afforded to the general populous. One sustainable environment objective is to make provision for enterprise, which Gypsies and Travellers are in accordance with the Maslow Hierachy of needs, in allowing their needs we discriminate against those with other interests that are neither Gypsies or Travellers. Sustainable objectives would be more readily met with more pragmatic approaches edg to s.,tn , thsi cannptr ism
C603	Agree with all 8 objectives

**2: Do you agree with the sustainable economic development objectives? Please tick all that apply.**

**Do you agree with the sustainable economic development objectives? - Grow opportunities for a range of high-quality, well-paid employment across the district including opportunities for graduates and younger workers.**

Option	Citizenspace
Agree with the objective?	271
Agree that the objective reflects the key issues that are facing the district?	129
Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?	75
Not Answered	299

**Do you agree with the sustainable economic development objectives? - Aim to provide for new offices and workspace in easily accessible locations and to protect existing offices and workspaces which are located in areas with sustainable transport links or where they reduce the need to travel to work and which reflect the on-going changes in the way people work.**

Option	Citizenspace
Agree with the objective?	237
Agree that the objective reflects the key issues that are facing the district?	118

**If you disagree with the sustainable economic development objectives, please explain why:**

Respondent Number	Respondent Comment
C1 Manchester City Council	The Local Plan for new offices and workspaces needs refining. Public transport is not within our control, and although to some extent significant employment space will make limited public transport more sustainable we cannot impose blanket conditions if we are to promote employment opportunities throughout the district for the full range of paid work and businesses. Some, by their very nature, need a site remote from homes and/or with good road access.
C2	I generally agree with these objectives, though remain sceptical about "carbon neutrality" as a concept. Infrastructure should recognise the imperative for the use of cars by residents in rural locations, who are discriminated against by ever increasing parking charges. The "high street" in all settlements is evolving. Serious thought needs to be given to how development is encouraged, to include a mix with greater residential opportunity, co-working space, high quality and imaginative retail allowed and prioritised over a proliferation of coffee shops, affordable car parking and easy access for visitors (not park and ride). High Street landlords need to be consulted and encouraged to support the local plan (financially if necessary).
C4	New inward investment linked to growth whether visitors or others must be accompanied by infrastructure investment to ensure any growth is carbon neutral.
C5	"Aim to ... protect existing offices and workspaces " Directly due to WCC NOT doing the above my area has lost a lot of office space, causing the workforce to commute.
C8	No more tourists please. Only a few shop keepers benefit, not local people who have to put up with the crowds.
C10	You're in danger of focusing too much on the environment and not enough on growth. The environment is important but there needs to be more of a balance. It's a pipe dream to assume people will live and work in the same place. I work in a city but live in a semi rural area and have no choice but to use my car to get to work.
C15	Not everyone can be a graduate, or want to be. We need people with practical and manual skills, they should also be well paid and they are often also highly skilled. We need people to grow food, retrofit homes, develop green industries with a circular economy eg converting waste water into a fish pond and /or algae growing medium. Both produce food, recycle materials, suck carbon out of the atmosphere, and provide employment. More land may be needed for these types of food and material production We need fresh thinking, to cater for regenerative sustainable new industries, which may not yet be invented! Land to create innovative industries and jobs needs to be available, and they need more than office space.

C17	it remains to be seen how work patterns will change post-pandemic with more people opting to work from home which could impact the type of suitable infrastructure required.
C20	I don't disagree but if we are looking at reducing out of town outlets then traffic management really needs to be considered in Winchester City Centre.
C22	Out of town retail developments are necessary as they serve a purpose and have easy (and free) parking.
C23	<p>The objectives are very generally worded, and most of them fail to include any specific measurable target of what the Plan is seeking to achieve - they work as general statements of intent, but need more detail.</p> <p>The local economy needs to provide for a range of job types and skills, not just the higher paid and for graduates and entrepreneurs. This seems to be missing in the current objectives.</p> <p>The premises, transport and infrastructure needs of existing businesses doesn't seem to be given a high enough priority.</p> <p>I support sustainable locations for employment, but the Council needs to recognise that not all businesses can operate without relying on the use of private cars. In consulting, there is a need for travel to sites and Clients offices on a regular basis, and the current actions being taken to reduce car parking and road space in the city centre make it an unattractive location to do business.</p> <p>I don't agree that seeking carbon neutrality has been justified as the single over-riding objective that all other objectives must align with.</p>
C27	The one piece badly missing from the whole plan is that it is constructed without any regard to current and future traffic infrastructure needs and projected volumes (regardless of whether they are electric vehicles or fossil fuel.
C31	<p>There has been too much development in our area already.</p> <p>Working from home will mean less need for new buildings for employment.</p> <p>Use only brownfield sites for development, NOT green fields like Hursley.</p>
C36	I agree but providing for a range of workers should be "a range of businesses that provide employment for a wide range of skills & disabilities" Without these the inexperienced starters can only grow by changing employer. The available public transport may not meet the disability requirement
C37	Office space should be reconsidered in the era of home working, creating dynamic community social working hubs instead of office space solely for a singular company. COVID-19 has forced us to reconsider the working model of travelling to a designated office space, we know we can work from anywhere but do we all want to work from our homes? Having a place local to home, with pay as you go amenities (coffee, internet, meeting rooms, etc) would help put money back into the local economy and encourage working in social spaces

C40	Again, you are gearing all this to what you want to do. E.g. Presumed need for new office space. Where are the neutral questions that allow reasoned alternatives.
C43	Any development must be looked at in relation to its location and to the availability of the existing infrastructure to cater for any new additions. This is not what is currently being done
C46	The businesses to be encouraged is too limited/restricted and somewhat niche focusing on creative, IT etc. Both these particular industries are required to support other businesses - it is those businesses that need to be encouraged and then there will be demand for the industries listed,
C57	Please remove cycling from the above. Cycling ceased to be a mode of transport in the 1950s. It is now a sporting activity for the young and middle-aged. By all means construct a velodrome with VR facilities such as Peloton - but let's not fool ourselves that cycling is or ever will be a form of mass transportation.
C58	I think there may need to be less emphasis on new office accommodation. The pandemic has change the way we work. There should be incentives for new businesses that regenerate our city centre and high street.
C60	I question whether more tourism is beneficial to residents I have no idea what promoting active shop front means, but surely this is not out of date - it is managing the decline that matters
C61	"Aim to provide for new offices and workspace in easily accessible" I don't think we need new offices, there are so many unlet ones now. We need more affordable housing, and less traffic.
C63	I do not disagree with the earlier questions here but I have reservations about the risk of expanding the size of the city and of intruding into countryside. Although commercial viability id important commercial expansion should not be allowed to detract from the unique quality of the city or tge opportunities of building on those.Also the provision of asffotrdrable housing for those actually working locally, especially at relatively lowly paid jobs, should be prioritised over attracting new residents .
C75	Out of town retail developments still have a key role to play. To think otherwise is extremely naive. Just witness how busy Sainsbury and Tesco are. Plus DIY shops, Cycle shops, furniture shops, garages etc are unsuitable for a town centre. The car is not going to vanish, just the propulsion unit is changing.
C77	High Street: I think the traditional future for this has changed due to Covid changes to society. New uses need to be investigated for high streets. superfast broadband and good mobile phone connectivity. This should not be just focused on new developments. More important that it is improved by rural areas being left behind.

C81	I do not agree with the idea that just because a new development ticks all the green and sustainability boxes it should be allowed without considering the adverse impact on the rural ecology of the area. We should continue to protect our green belt to ensure that we do not end up with a metropolis where Basingstoke, Winchester and Andover are all merged by infilling development, even if this ticks all the 'green' boxes. We must protect our dwindling green spaces at all costs.
C84	disagree with discouraging out of town retail developments if residents are unable to easily access town centre shops by car; can't have both as shopping will be on-line or in centres such as Basingstoke which are more welcoming to shoppers
C95	don't agree with a plan that would see the development of a high street in a small rural village.
C100	I believe it is very important that brown field sites are developed first and there is no significant increase in the size of Winchester itself or the towns and villages around. For example the proposed development at Royaldown would be detrimental in many ways to the local area and should be opposed.
C101	There are already enough office spaces and buildings that could be converted. Working from home is increasing, even after Covid. No more development should be approved.
C103	Re: question regarding production - the Council feels that generally, the country should be supporting locally produced items. Development should be appropriate to local needs and not designed to compete with other centres in the immediate vicinity, e.g Basingstoke, Salisbury, Eastleigh
C116	The comment has been removed as the respondent requested their response not to be published
C117	I agree with the objectives. I think rents in the city centre should be lowered to encourage more shops and business rates too.
C123	The following economic objective needs amending: “Actively encourage development which supports the needs of new businesses and entrepreneurs of the future, particularly within the creative sectors including IT, Digital, Architecture, and emerging green growth sectors. “ It should instead read: “Actively encourage development which sustains current strengths in areas such as health, education and local government while also supporting the needs of new businesses and entrepreneurs of the future, particularly within the creative sectors including IT, Digital, Architecture, and emerging green growth sectors. “ We must not forget the existing strengths in the local economy while looking to the future.
C124	I think this is the area of the plan that needs to be revisited. I think that based on what we have learnt in the last year, there will be less office working ( so don't build more), less shopping in person ( so don't focus high street

	renovation on shops) and less industrial work. The plan should be interested in supporting people working from home, ensuring great IT connectivity and personal networking opportunities. The high street should be more for connecting socially.
C136	Not only do we need Well Paid jobs, we need jobs for the lower paid. Some of the questions have a bias against the low paid. Some of the questions have multiple facets such as cycling ,walking and then mention to fast broadband.It just lumps many things in one question
C144	To many objectives
C150	I disagree with points 1, 2 and 4 for the following reasons: 1- remote working is here to stay. it does not require a business to be located within the Winchester region and is highly unlikely to be the case that an employer would move to the area or set up in the area since location of offices or staff is null and void for business success 2-no office space is required for any business that is going to be successful now or in the long term. The only space required is for more facilities for health and education purposes 5- geography is irrlevant with remote working. Larger enterprises are hiring from market and rural towns without demanding the need to be in another location
C156	Covid-19 demonstrated how easy it is to now work from home. I agree, 'existing offices and workspaces which are located in areas with sustainable transport links or where they reduce the need to travel to work and which reflect the on-going changes in the way people work' need to be protected. I disagree 'new offices and workspace in easily accessible locations' need to be provided because there is already a surplus of office/workspace within the city.
C163	What do you mean by inward investment? It is difficult to answer the question without an explanation of this.
C164	Not sure why more office space is needed in the current climate and expected ways of working in the future.
C165	This is a big list of motherhood and apple pie. It would make more sense if it was presenting meaningful *choices*
C166	Not Answered
C167	Post COVID it is unlikely that we need more workspaces but rather more central situated domestic accomodation.
C177	Sustainable economic developments need to be targeted where the developments themselves are fully acceptable

C186	Again the performance indicators are missing so how will proposals be judged? Moreover, while accepting that the plan should be a spatial plan more than simply a land use plan recognition must be given to hat WCC can actually achieve . What does actively encourage mean?
C189	Please see previous response
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.
C198	I am not sure that the Council can actively encourage development for "creative sectors". I am not sure what that means. It is clear that there is a dearth of good office space which is why many commute out of Winchester. Not sure why we need to ensure that we are attractive to visitors or what that means exactly. Tourism has a downside as well as an upside especially if considering carbon neutrality. But of course we should certainly retain and look after the heritage we have (built as well as ecological).
C208	I disagree with discouraging out of town retail developments. These do not suffer the congestion of the traditional high street, and reduce traffic entering the city centre. They provide employment that is convenient for employees to reach. Good design is essential to ensure that EV charging points are available, that sites are accessible by public transport, and have good access for cars, commercial vehicles and emergency services.
C214	There is a need to support more than cycling and walking, golf and other outdoor sports should be support and PROTECTED.
C215	We need to be careful not assume that there is a need for lots of new office accommodation in Winchester in order to encourage local working. Lessons from the lock-down need considered.
C220	There is too much emphasis in these questions on 'growth' and 'development'. We need to find an economic model based less on growth.
C224	DISAGREE WITH ALL SECTIONS
C239	I don't disagree but some of these statements are vague.
C243	Out of town retail developments are good for certain sectors, while high streets should cater for urban residents and tourists.
C244	Out of town retail developments are important for the rural areas to reduce travel
C245	I do not support discouraging out of town retail developments, such as supermarkets and large goods shops. If one wants to reduce pollution in the city centre then surely we should encourage out of town retail for items that need cars to get purchases home.

C246	Enough empty shops & offices so should not be promoting new development
C248	Existing retail and other associated uses need to be geared to the changing world of retail demand - on line shopping is here to stay and to unreasonable and uneconomically remain with existing uses will not benefit the city . The city area ( and other urban centres ) with their closeness to higher density development will be the place where young and old ages groups, their life and employment styles and activities should be encouraged . With employment allocations comes the need to provide housing/ transport links etc which all have a negative affect.
C259	Out of town retail developments have a place in the greater scheme of things. Placing Ikea in Southampton increases traffic into the city centre, whereas the Hedge End shopping development allows for larger stores that many urban centres can accommodate.
C264	More people lead to more development, lead to reduced green space, more traffic and more pollution, especially when a large part of the local area has been swallowed up by the National park, and a large part by Welborne.
C273	None of these questions addresses the quantum of employment. Additional employment equals additional population and infrastructure equals further drain on World resources. The questions do not separate the quantum of employment from its type. Improving the mix is separate from increasing the quantum. Why does WCC want to increase the population? And where does that pyramid scheme end?
C274	This are does not need to encourage economic growth. enough happens with very small amounts of encouragement. The UK needs to develop areas which LACK economic growth. Not the likes of Winchester.
C276	In my opinion the aim of office and retail space needs to fit into the changing transport technology and potentially to drive forward the separation of different transport vehicles. Given the experience of the past year or so the speed of commercial and life style changes bring forward the need to speed up the plans around town and village centres.
C278	I do not agree that new offices should be built in open fields, completely against the character of the area. A farm should be farmed with animals or crops not converted to residential living and offices. We have many footpaths and cycling tracks that people travel to come to, however they are not maintained by the council. It is left to local land owners to either keep available or to shut off as the owner deems fit. Again this topic is completely different for inner city and rural areas and can not be included under the same heading or question.

C290	I don't agree with any of the objectives apart from the last one which will only serve to bring even more people into this already crowded area which will require yet more housing . The rates currently charged to ou local businesses are excessive causing them to close or move.
<b>C298</b>	The comment has been removed as the respondent requested their response not to be published
C299	This is the wrong part of the country for uninhibited growth of population. It must be part of a NATIONAL strategy, bringing employment and consequent development where needed most. Winchester and, indeed, Hampshire cannot be planned in isolation..
C305	I disagree with discouraging out of town retail developments. These do not suffer the congestion of the traditional high street, and reduce traffic entering the city centre. They provide employment that is convenient for employees to reach. Good design is essential to ensure that EV charging points are available, that sites are accessible by public transport, and have good access for cars, commercial vehicles and emergency services.
C306	Far too many, too generalised, how are these to be monitored. Waste of time.
C313	The questions are weighted in favour of only agreeing with the propositions. There is no opportunity to register stronger disapproval of the propositions, making the survey unfairly biased in favour of the plan.
C317	Further large housing developments will be devastating to local environment and levels of traffic.
C321	I would love to see somewhere like Marylebone, Falmouth or Lewes used as an example of how to retain an active, local, independent filled high street. In the 7 years since I have lived here, the high street has gone from the most attractive high street filled with lovely independents to a high street half filled with empty shops or chains that you can find anywhere. Or what about doing an airbnb for shops so short term leases are always on offer for pop up shops so the high street always feels fresh and new.
C323	Thakeham would question the link between high value employment in specific sectors and carbon neutrality. If anything, high value employment may result in unsustainable commuting patterns as employees are drawn from a wider area than for lower value jobs, unless housing growth is supported at a similar level.
C326	Economic development at local levels, whether it be village or city, must reflective the economic principle of permanence... Only then will our communities be able to withstand the impact of recession even at the social level.. Any development that does not seek to protect that local environment should be dismissed...I would also argue that it is far from proven, that new large scale development is needed in our area

	For communities to be sustainable both economic and social needs need to be addressed. Large scale developments generally destroy local character in the quest to satisfy developer greed.
C329	The first objective is too generic and too focussed on high-paid etc. Might be suitable for a future Local Plan when we have sufficient opportunities for everyone to access high-paid, quality jobs through growing our own young people without drawing in new people from outside the district in general terms. Therefore suggest including opportunities around 'living wage'.
C334	We should look beyond Winchester district to develop the economic strength of the region. In Southampton, there is a leading research-intensive university which excels in knowledge exchange (see the recently published Knowledge Exchange Framework) and in producing graduates with high-level skills. High quality employment is usually associated with the presence of institutions producing people with such skills. The plan should recognise this and provide an overt reference so that plans are built on it.
C336	<p>Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.</p> <p>The objectives should be drafted such that they provide a robust framework for assessing the local plan and the detailed policies and proposals. In particular they should enable the Council to undertake its assessment of how the local plan will deliver the overarching objective ie: carbon neutrality as currently set out or delivering sustainable development.</p> <p>CPREH considers that the over-arching objective for the local plan should be the delivery of sustainable development which could encompass the reduction in carbon emissions, but also the other key components of sustainable development and land-use planning i.e.; strong and competitive economy, meeting housing needs, supporting the community's health, social and cultural well-being, protecting and enhancing the natural environment.</p> <p>At present the options provided later in the consultation in Issue 4 <i>Homes for All</i> do not appear to have been judged against either these 22 objectives or those set out in the Integrated Impact Assessment Scoping Report. Notwithstanding our comments above, we feel it important to point out some issues on the objectives as follows.</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Critically there is no objective which requires making more effective use of land, specifically brownfield land as set out in the NPPF 2019 Chapter 11</li> <li><input type="checkbox"/> There is no objective which mentions landscape, or ecosystem services that are provided by the countryside.</li> <li><input type="checkbox"/> Habitat connectivity has been omitted from the point on biodiversity.</li> </ul>

	<ul style="list-style-type: none"> <li><input type="checkbox"/> Settlement gaps should be protected, and coalescence prevented</li> <li><input type="checkbox"/> Living over the shop and the new role of the high street should be incorporated into the objective on high streets.</li> <li><input type="checkbox"/> There is no mention of affordable housing, or social housing.</li> <li><input type="checkbox"/> The transport objective fails to highlight the importance of mass public transit hubs, particularly the rail network, as being a significant way of minimising car travel.</li> <li><input type="checkbox"/> An objective on reducing the embodied carbon costs of new buildings and roads could usefully be incorporated.</li> </ul> <p>CPREH is campaigning for a South Hampshire Green Belt. PfSH has supported the principle of a Green Belt and the case for such a designation is included within its work stream on its Joint Strategy. The protection of the integrity of the settlement pattern in South Hampshire, including that part within Winchester District should be a key objective. The new local plan should include policies which retain the character and setting of the towns and villages in the District and to designate a Green Belt. CPREH believes this should be incorporated either in the Vision or the Objectives.</p>
C342	There needs to be more emphasis on carbon neutrality and low impact development in any planning for the future
C343	<p>We would like you to include the words 'low-carbon' early in every objective, otherwise this will be an endorsement of some bad global heating practice.</p> <p>We would like to add to the 'encourage development' list local food production and distribution initiatives</p> <p>We would like to add to the 'high street' objective after 'uses': "ensuring retail facilities designed to help consumers reduce their carbon footprint eg repair shops, shops selling goods from low carbon production and with low-carbon operation characteristics, and selling low-carbon locally-produced food."</p>
C344	The comment has been removed as the respondent requested their response not to be published
C346	"Support development which is designed in a manner that actively encourages people to live, work and spend locally and supports a sustainable tourism economy. " These are 2 separate objectives, not one. Encouraging people to live, work and spend locally is in line with all 3 objectives. Supports a sustainable tourism economy may not be aligned with residents' interests.
C347	See answer to Q4 in this section

	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C348	<p>See answer to Q4 in this section</p> <ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C353	<p>Not a disagreement but a supplementary point to factor into achieving a sustainable economy - the pandemic has shown how important essential but often low paid, frontline work is everywhere in the district, but it's typically done by people who can't afford to live in high-price housing. So affordable housing needs to be part of the mix to reduce inward commuting to wealthier areas</p>
C355	<p>Accessible high streets are fundamental to economy and society providing an inclusive place for all</p>
C356	<p>It is wrong to limit the sectors that you want to attract to Winchester. It will put other businesses off coming here, they are not good long-term employers or payers, they limit the employment opportunities who might be unsuited to such work or who want to earn broader and more marketable qualifications.</p>
C360	<p>While I agree with the aim to attract visitors and new inward investment this aim must not be allowed to cause excessive visitor traffic or overload the need to retain attractive areas by over-development with excessive inward development</p>
C362	<p>The comment has been removed as the respondent requested their response not to be published</p>
C365	<p>I worry that these objectives could be quoted out of context. They need to be clearer about the relationship between economic development and what is good for the environment. We need to revive the economy, but only if we 'build back greener.'</p> <p>It would to reword all the objectives accordingly. For example the high streets objective should read: " Reduce carbon emissions in our high streets and develop them in a zero-carbon way by ... " I would like "in a zero-carbon way" to be included in each objective.</p>

	I would like at least one carbon reduction technique in each objective: eg in the employment objective in growing green engineering companies, in the offices objective "eg adjacent to railway stations" in the tourism objective, 'sustainable' should be replaced with 'carbon-reducing' etc. Some people will mistake 'sustainable' to mean 'that will survive' whether or not by consuming fossil fuels.
C379	Office development needs to take account of likely increase of home, online working which has been engendered during the COVID pandemic. Before increasing office space provision, wait and see how much is actually required after the pandemic. Many businesses and local authorities are questioning whether they need existing office space.
C385	Difficult to say re out of town developments, in some cases the space is needed for large stores/supermarkets etc that would be out of keeping with the high street - there needs to be a balance Provided there are good public transport links this is not totally against the sustainability aim
C388	These objectives need to take into account changing patterns of work, and in particular more home-working. The objectives assume new development is required, however this may not be necessary, if existing spaces are redesigned eg to provide shared spaces as small businesses in particular find they no longer need their own space, or as large a space as when people worked full time in the office. Empty high street shops could be repurposed into small workshops. Therefore an audit of current office and workshop space to ascertain real demand for any new developments should be key. Any new developments should use brownfield sites.
C394	We shouldn't need an objective to attract visitors. If we aim to make Winchester an enjoyable and sustainable place to live and work, with a wide range of cultural facilities and local independent shops, the visitors will come anyway. And then we need to make sure they don't travel by car by not providing massive car parks.
C413	If you don't want people driving into towns why are out of town developments so bad? I'd prefer not to have to do a big weekly shop in a town centre and then have to carry all my shopping as I walk home,
C416	This idea of a new heaven is great. But is it realistic. For example we buy everything from China. We manufacture very little here like we did in Victorian times. When is that going to change. If anything has been learnt during this pandemic we need to do more ourselves but how?
C425	Encouraging economic growth in the area will divert resources from more deprived areas. I am concerned that Winchester city is not large enough or laid out in a way which will accommodate further substantial increases in population . The plan should be to manage organic growth of the existing enterprises and population rather than encouraging substantial inward investment and population growth. The proposals which are set out to encourage inward investment are not consistent with zero carbon emissions.

C429	<p>The 6th objective on transport makes no mention of mass public transit hubs (particularly rail), which are the most sustainable mode of transport and so any new development should be centred around these hubs. There is an overlap with Social objective 1, but neither makes the sustainability point.</p> <p>The 8th objective does not really deal with the potential change in our habits, post-Covid and with the proof that much of our previous daily lives can now be carried out remotely over the internet.</p> <p>There needs to be an evaluation and associated objective that looks at the impact of the recent changes to permitted development rights and how that will affect Winchester, its towns, villages and countryside.</p>
C437	<p>I think that the out of town developments are a lot easier to use as it stops cars from polluting the towns with engines idling in streets that are too small to cope with traffic and queues are formed. These do need to be regulated in order to contain them though. This also cuts the cost of parking. This is why I don't use main cities to shop as the cost of the parking adds to the day, particularly Winchester as it is a nightmare to get into and out of. I don't like using the Park and Ride as it means I have to carry the shopping which is too difficult. I also am not a fan of online shopping as I find I am usually returning items and this is a waste of more energy for van drivers using the roads and the petrol/diesel required.</p>
C441	<p>Employment needs to be looked at county-wide, not just within the City council area. Winchester is well connected to urban centres and local jobs do not necessarily need to be within the city and surrounding market towns</p>
C445	<p>Development or redevelopment of the high street is admirable. One key factor is bring the people back to live closer to the high street, design around more localised village-type communities. The difference is do we want an American style large out of town retail or more European Urban developments seen in many countries in Europe.</p>
C452	<p>You are suggesting all the right things and I can't imagine why anyone would disagree with you. This is all fine and dandy but how will you implement these changes effectively?</p>
C453	<p>These are very laudable but very broad brush wishes! I'm not sure how much we need to attract additional 'middle class' jobs in architecture, digital and graduates etc. Although the Winchester district is very prosperous generally, it also has quite a lot of older people because they're the only ones who can afford housing and many of them commute into London to finance it. Over time we need less commuting (which is carbon heavy), and more working and living based here, and in village communities which aren't so sustainable with low wages. I do think we have many poor areas too, and as the older and richer die off (!) we may well need better employment and housing opportunities for younger lower-skill or essential workers too. High house prices mean attracting graduates can be very difficult without a good rented sector and it's good to see the council building more council houses, not just houses to buy at a slight discount or rent at 80% of the market average which is still very high.</p>

C461	I agree with the objectives but do not have sufficient understanding to comment on if they reflect the key issues that are facing the district or if they support the fundamental aim of the Local Plan to achieve carbon neutrality.
C469	I mostly agree with these. New business must include manufacturing and agriculture, I'm not sure why you largely mention the service sector alone. Our reliance on this is a weakness of the UK economy.
C471	Again the issues have changed re office space and type of businesses to be encouraged. I believe a longer hard look should be taken in the future when the retail/ office work/ business needs can be more accurately assessed.
C475	The excessively high business rates being charged are causing our local shops to close or move out to rent farm buildings.
C479	Again, well meaning but what sort of employment will really help this area. Well paid is not an option when many jobs, eg care work, factory work, many civil service jobs, all poorly paid. These objectives sound like cottage industry scale which caters for niche jobs and those which can be done remotely. Many jobs cannot. These need good travel facilities, car parking, buses, trains.
C482	Again another abuse of the consultation process with the inability to comment beyond the three predetermined answers Questions mix objectives therefore not gaining clarity on the salient issues.
C491	How can employment opportunities be provided close to residences when property prices are astronomically high, or is the intention to continue turning the town into a ghetto for very wealthy.
C494	Again with the advent of COVID and the convenience of click and collect and the rise of Amazon and others, the local shops and high street will be very different and will not return to the same 'as was' pre COVID. Your objectives need to be updated to reflect this and how to address this. The objectives as they stand have over taken by events (COVID) and are no longer viable. You cannot answer the second and third options without detailed understanding and knowledge.
C509	Ongoing review is needed to ensure that office space demand - and the type of office demand (for example, short-term hire office space may be more suited to a new WFH orientated workforce) is reflected in the plan.
C514	This is a rural area and should not encourage office and manufacturing into the area. The emphasis should be put on tourism, and nature, encouraging visitors rather than businesses. Employees do not spend in the local area as proved by the loss of big employers in Winchester.

C516	<p>The Local Plan Objective needs to mention actively encouraging new businesses and entrepreneurs, and new and innovative working practices, based around the food sector, in order to promote the local food economy. New development to be served by a sustainable food infrastructure, which encourages the production and sale of local, healthy and sustainable food.</p> <p>Long term development of the main retail streets need to include reference to food as essential retail.</p>
C523	<p>Same answer as last question with the added comment that a Spanish study recently showed that for every 'Green job' there is a loss of 2.1 jobs in the conventional economy so, jobs-wise, sustainability doesn't seem so sustainable</p>
C528	<p>Not all employment site are served by public transport and these sites should not be penalised for nit having such links. The NPPF advises at Para 84 which advises;</p> <p>84. Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found adjacent to or beyond existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable.....</p>
C529	<p>These objectives do not in every case go far enough. Some should be directed at reducing/eliminating non-environmental practices, for example, no greenfield site development (that means only brownfield!).</p>
C532	<p>Creating a sustainable food culture should be included explicitly ; both for residents and part of the tourist "offer" .</p>
C535	<p>Whilst not disagreeing with the objectives as set out the Winchester Food Partnership think the following points should apply:-</p> <ol style="list-style-type: none"> <li>1. The Local Plan Objective needs to mention actively encouraging new businesses and entrepreneurs, and new and innovative working practices, based around the food sector, in order to promote the local food economy.</li> <li>2. New development to be served by a sustainable food infrastructure, which encourages the production and sale of local, healthy and sustainable food.</li> <li>3. Long term development of the main retail streets need to include reference to food as essential retail.</li> </ol>
C539	<p>I would comment that I do not feel that many of the objectives have anything to do with "sustainability".</p>
C542	<p>The economic goals are clearer and better defined than the environmental goals.</p>
C543	<p>Whilst long term development of high streets should be promoted we believe that there is a section of retail that is best suited to out of town locations. This would include D.I.Y, domestic electrical retailers, auto-parts suppliers and trade wholesalers.</p>

C549	In my opinion supporting a sustainable and circular economy implies less "retail therapy". To that end, and to make the city and town centres more appealing, attractive homes should be developed. All developments should be "eco-friendly".
C561	Being attractive to visitors (ie in providing a rural environment) may not make it attractive to inward investment of all types. Grouping both aspects within one question makes it impossible for any comment to be given on both quite separate aspects Your wording of the questions appear to be encouraging a supportive response rather than facilitating a discussion on the positive and negative issues contained within.
C566	Where is the support for working age people who are not high flyers? Where is their opportunity? Where are they to live if their wages are low?
C574	Again these are just empty words. For example, what do you mean by 'active shop fronts' - do you mean actual shops, or do you mean shop windows advertising on-line retailers - i.e. fronts with nothing behind them? If you mean actual shops, why not say so?
C580	see above comments on environmental objectives
C584	If these are the objectives the present plan for development in Winchester does not reflect them.
C586	See last question: Practically, the horse has already bolted on this: Sainsburys, Tesco, Currys, Whiteley etc are all 'out of town'.
C590	It does not make sense to artificially prop up shops in the High Street if there is no longer a demand for what they offer. Better to allow for the real estate to be converted into dwellings to bring more people into the city / town centres, thus reviving the demand for the shops and services that are viable, and potentially fuelling demand for more. A virtuous circle. Having more people live centrally will also reduce the need for people to drive into city / town centres.
C593	As is shown by WCC's own economic development reports, most recently Winchester Economic Land Study April 2020, Winchester City has a much higher nos of jobs than is required by its own population by something like 50% and this imbalance is increased by the large % of City residents commuting out of the City to work. The result is that WCC relies on the settlements to the south to supply its labour force causing major commuting flows on feeder roads' and constant congestion. The B3335 through the centre of Twyford is heavily impacted. This is contrary to the Governments policies on Sustainability. Moreover Winchester City has a varied and secure employment base with an inbuilt growth potential. Further, planning controls are not able to limit occupation of commercial space by particular users, so the aspirations of the Consultation paper are not achievable. Consequently NO FURTHER PROVISION should be

	<p>made for employment land in the City or its environs .</p> <p>Bushfield Camp allocation is an outdated proposal which embodies the conflict of the existing plan with current and emerging priorities. The proposal has , in addition, particular attraction for car users and is therefore now contrary to the principle aims of Winchester's emerging local plan. It is also impacts the SDNPA landscape, the setting of Winchester, the views of St Cross and for traffic generation and pollution, the impact on Twyford's roads.</p> <p>Please revisit the economic vision for the City.</p> <p>The Economic vision for the South of the District needs to be considered in a Strategic context as part of the South hampshire sub region. Economic activity has somehow to be stimulated in these areas which is where the majority of housing growth has been and will continue to be concentrated.</p>
C594	<p>I would like to qualify one: I would like the District to become *proactive* in creating, through negotiation or even purchase, joined-up footpath routes at local level for local 60-90min circular walks, esp where there are new development sites. Similarly for safe cycling routes for travel to/from work as well as leisure cycling, esp to link Whitely and Wickham and other nearby places.</p>
C595	<p>The comment has been removed as the respondent requested their response not to be published</p>
C597	<p>Please see representations made to Planning Policy, submitted in PDF form.</p> <p>The second social objective sets out to 'provide and broaden the choice of homes to meet the identified needs of our communities and to support long term economic growth'. In this respect the plan should be more explicit in stating that it will need to boost housing supply and provide land to meet as a minimum it's identified housing requirement over the plan period. Furthermore, housing affordability is acknowledged as a key issue for the Local Plan and this should also be more explicitly acknowledged in the social objectives.</p>
C600	<p>I agree with these, these could be enhanced by supporting small enterprises and micro developments undertaken with care and consideration, integrated with the environment</p>
C601	<p>In Winchester, the approach to the high street needs careful consideration. It is likely that greater leisure, cultural and heritage activity in the city centre will be needed to keep it vibrant and support economic sustainability. Retail is unlikely to thrive on its own. Similarly, while some out of town retail development might be inappropriate, the 15-20 minute neighbourhood concept requires the development of retail clusters around the city; and there is a need for more family-oriented leisure provision in Winchester, which cannot be accommodated in the city centre, and this may have some associated retail alongside it. Resistance to such out-of-town development is becoming an increasing barrier to such provision, and this is unsustainable – local people need more than houses alone, and places to play and relax and have fun together are essential to residents' health and well-being.</p>

**3: Do you agree with the sustainable social development objectives? Please tick all that apply.**

**Do you agree with the sustainable social development objectives? - Achieve a transport system that is balanced and is focused on sustainable transport modes that provides everyone with a real choice whilst supporting walking and cycling and tackles in and out commuting**

Option	Citizenspace
Agree with the objective?	264
Agree that the objective reflects the key issues that are facing the district?	144

**If you disagree with the sustainable social development objectives, please explain why:**

Respondent Number	Respondent comment
C1	I have a real problem with long term economic growth as a concept, it all too often results in over consumption and the consequential impact on natural resources and the environment. I would prefer to replace this with an aim of sustainable and organic growth, resulting in a better work/life balance for all.
C2	Please don't demonise private cars. Remember that shortly all private cars will be electric. Private cars are also essential for rural residents. Private cars are also integral to every individual's liberty, freedom to move, and quality of life.
C4	I don't see the connection between this: Provide and broaden the choice of homes to meet the identified need of our communities and to support long term economic growth: and carbon neutrality. Indeed it may be the antithesis.
C5	More pie in the sky. How does WCC expect people to avoid private transport when the majority of villages have no or totally inadequate public transport.
C8	Too many students in this small city. Close the university, with its Mickey Mouse courses, and use the accommodation for poor and homeless people.
C10	Many of these objectives are very bias. Why is their not a don't Agee box
C15	You could go even further and encourage residents to take an active role in creating green spaces such as vegetable growing, community orchards, growing spaces for all ages. Also, why are some front gardens or areas around flats always only short mown grass? They could be wildlife habitats.

C17	Focusing on walking and cycling is all very well in urban areas but not in the villages where the nearest GP or supermarket may be four or five miles away and public transport is intermittent .
C23	The objectives are very generally worded, and most of them fail to include any specific measurable target of what the Plan is seeking to achieve - they work as general statements of intent, but need more detail. Sustainable modes of transport should be supported, but there also needs to be recognition that some businesses need to be able to access and use private cars to operate. The current approach of car parking restraint and reducing loadspace risks driving these businesses out of the City - which will then lead to increase levels of car use, not reduce it. A balance needs to be struck if the City centre is to thrive as a living and working centre. I don't agree that seeking carbon neutrality has been justified as the single over-riding objective that all other objectives must align with.
C31	The key problem facing the district is over-development, with too much building. Social problems would be made worse with more building.
C36	I agree the objectives. The high rise as defined in Objective 1 response meets all of these objectives except that for education. I support this because it can only be met by large scale new town development. Its location is then a further component of the soundness issue of sharing development with neighbouring authorities.
C40	Again, you are defining sustainable social development ad then wanting us to say "yes".
C43	Again this misses the point. Most outlying villages have no local work. People travel to their employment. With pathetic public transport then the car is the only alternative. All this talk of walking / cycling is a lovely idea but is not the panacea
C53	We do not need any more out of town development. We need a Green belt in place as soon as possible. The birth rate is declining. People with Learning Disabilities prefer to live together. They don't like living in general communities. They usually like living in the town centre and able to access places independently, if they can.
C57	Macro objectives are fine, but frequently unachievable, resulting in the implementation of micro changes which are not truly geared to long-term needs. For example: will Stagecoach change from carbon-based to electric or hydrogen powered vehicles? Will micro-commuting to and from Kings Worthy be possible using eco-friendly public transport rather than big half-empty buses or smelly taxis? Simply creating an environment hostile to cars without thinking-through the alternatives is a non-starter.
C58	Building method used for new build in Winchester need to more innovative. High embodied carbon concrete, brick and block construction methods are outdated.

C61	There should be a big emphasis on Affordable housing, and less traffic.
C76	I think in a couple of these objectives, there is confusion between sustainable social objectives and transport. Sustainable social objectives should not be driven by transport strategies, transport should facilitate sustainable social activity and not dictate it!
C77	I think there is too much anti-car sentiment in Winchester. I will not give up my ability to use my car to travel independently and am not convinced cyclists should be given so much freedom in these areas that were not designed for them to be ridden safely. Too much focus is on attending 'performing' schools rather than local (walking distance) ones.
C84	Built environment should focus on what the majority want which includes being able to choose methods of transport which includes cars. and sufficient space to put them.
C95	aims are great but if you don't provide enough parking at the properties then the surrounding streets become hazardous as vehicles are parked there instead
C100	The above are all important and are consistent with opposing major new housing developments such as Royaldown. They also support the need to maintain a full hospital including A&E within Winchester.
C101	There are enough high sounding aspirations to drown out a reasonable person here! "Develop" is not a good word. Smacks of building and concreting over green fields.
C103	See comments above The Council does not disagree with the objectives, but find that the questions that you pose lead us inevitably to the answer that you seek. Re: question regarding production - the Council feels that generally, the country should be supporting locally produced items. Development should be appropriate to local needs and not designed to compete with other centres in the immediate vicinity, e.g Basingstoke, Salisbury, Eastleigh
C116	The comment has been removed as the respondent requested their response not to be published
C117	I agree with the objectives, but we still need to use cars, and if they are to be electric in the future, then that will be fine. Smart motorways should be discontinued. They are dangerous.
C124	We do not need vast new housing estates in Winchester. That is not sustainable social development. New housing is necessary however it should be on brown field sites and built to consider home working and a pleasant social environment.
C136	Again to many items in each statement, thus unable to respond accurately

C140	I do not agree with building thousands of houses in Olivers Battery - on the golf course or on the Royal Down development because of the impact on the wildlife and in particular the residents by the golf course
C144	I don't disagree but too many objectives. see note 4
C146	i don't think that it's practical for developments to ignore people's use of cars. This has been tried in Poundbury in Dorset and has caused a lot of difficulties.
C150	I disagree with points 2 and 3 for the following reasons - Barton farm has far from being finished being built. As an area with this development it more than provides both sufficient number of housing to meet demand and breadth of variety. The area does not require either more volume or more variety at least until every last house on Barton Farm is built and sold
C156	Sustainable social development should not be at the expense of the environment i.e green spaces.
C164	"Aim to create communities that are focussed on green spaces..." i support this in principle, but it should be achieved by creating green spaces (say from brown field) and NOT building on green spaces
C165	This is a big list of motherhood and apple pie. It would make more sense if it was presenting meaningful *choices*
C170	There needs to be a balance between vehicular access and people. More park and ride schemes including rural access for those that cannot drive. Dial a ride etc. at reasonable rates. Otherwise only the young will live in rural locations.
C177	Not disagree, question some of the wording
C186	Again, the crucial performance indicators are missing. What on earth are the practical implications of meeting these objectives? Who has determined local housing need and how does that relate to the neighbouring authorities who provide employment, cultural and other facilities. Seems to me we are back to the vision thing: what is the role of the Winchester area now and what changes are sought, and why?
C190	Please see my comments regarding pedestrian access on land managed by HIWWT above. I completely agree with prioritising pedestrians and cyclists over car users. During lockdown it has been a joy to see so many people out and about enjoying their neighbourhoods. I think that the plan could go further - to demand amazing pedestrian permeability on good quality surfaces to make short distances more attractive to go via foot, scooter, cycle, stilts, whatever!
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.

C197	Re the districts role in education - currently the University whilst promoting employment and economic growth is not managed in a way consistent with the objectives of the proposed Local Plan. There is little visibility of the University's own development plan - and therefore it is a major source of pollution (climate, light, and noise), a major generator of traffic and parking problems. The new Local Plan must address this and link student growth & buildings development to responsibility for reducing its impact on the local community.
C198	Not sure what is defined as "sustainable" transport modes. Not all electricity is from wind so electric is not necessarily sustainable. And how sustainable is nuclear power with the amount of radioactive waste to dispose of? And as cars go electric are these then sustainable? Cycling is great but with the topography of Winchester this is likely to remain a minority activity.
C201	The comment has been removed as the respondent requested their response not to be published
C208	In 70% of the district, people won't want to live in an environment that discriminates against private cars. "Balanced" tends to be a euphemism for making the roads inadequate for cars, rather than creating good roads, cycle-ways and footpaths. Much of my village entirely lacks sidewalks, and there are no cycle- or bridle-ways. Recognize that the most attractive places in the district will command a price premium.
C214	There is a need to support more than cycling and walking, golf and other outdoor sports should be support and PROTECTED. Better use of brown field and existing development sites should be preferred to the destruction of the green fields that surround Winchester
C215	1. While reducing reliance on cars is great. Increasingly cars will be electric and people will still want/need them. Building new houses with no garage/offstreet parking will require that we either move to hydrogen based fuel cell cars or that the council creates a lot of charging points that can be made available to the population without their own electricity supply. This will require a significant increase in infrastructure. 2. The increase in size of the university has led to increasing disappearance of affordable and council housing for local residents. This in turn puts greater pressure on the need for new housing. It's not clear to me that this results in a net benefit.
C216	Same comment as before. Please do not disregard the car which is an integral part of many lives.
C220	Anyone would agree with these objectives, but what if they conflict with one another? Is it really worth commenting on such a generalised wish list?
C224	DISAGREE WITH ALL SECTIONS
C234	Don't disagree but like motherhood and apple pie. Very vague with no balance on implications v benefits.

C236	<p>There are no social development objectives explicitly about development being sensitive to existing communities and the importance of development integrating with what already exists and building upon the communities that are already in place rather than overpowering it and seeking to create something from scratch. This seems to me a key component of sustainable social development.</p> <p>There are also no social development objectives explicitly about the ability of development as a tool to enhance existing communities, for example through the regeneration of brownfield and previously built upon sites.</p>
C241	<p>I feel we may trying to achieve too much and need to prioritise the objectives.</p>
C245	<p>I do not agree with the objective of discouraging use of private cars. Many of our citizens are in older age groups and/or have disabilities that make car use by far the preferred option. We should be encouraging the change to less polluting vehicles, powered by hydrogen and electricity.</p>
C248	<p>The plan seems to want to do away with transport and the car and concentrate on the benefits of walking and cycling . I wonder if that's practical . Travelling to shop or to get to work etc has be practical . Luggage be it shopping or a product move has to be a way which the market/general public wants - eg The success of Out of Town shopping centres with their free car parking versus other types of shopping types City areas</p> <p>Winchester City area needs to decided whats its role is . A Country Town and an Administration City yes -with the Headquarters of Hampshire County Council etc . It is i not an industrial city with the need for BLUE COLLAR EMPLOYMENT and the affects of this . The City benefits derive from Tourists - Administration - Retirement - others areas of Hampshire provide the other facilities of work encouraged now and in future by in part by central governments FREE PORTS legislation .</p>
C255	<p>Very difficult to response to the above. In the most general of terms they ALL seem desirable but abstract. They need to be converted into specific policies and targets.</p>
C256	<p>This section is not impartial and is looking to get a biased response. The overall aim of the Local Plan should be to understand how Winchester area will protect and meet its needs for the future in the short, mediuma nd long term. The pressure on the area as one of the best places to live in the UK will continue to mount and the local plan should reflect this and not 'roll over' to poor development schemes e.g. Winchester Village and Barton Farm and now Royaldown.</p>
C257	<p>Development should be on brownfield sites as a priority. Students should not take priority over local residents.</p>
C259	<p>As I stated previously, private cars are important for the elderly, disabled and infirm. We need to be careful not to pursue discriminatory policies against people for whom the private car is important, and for whom walking, cycling</p>

	and public transport are not a viable option. Electric car enabling is the way forward. The council needs to consider the needs of the less able, and not let them get drowned out by well meaning eco-warriors, who have not thought through the limitations which may be placed on others. For example: My own mother is in her nineties, and expecting her to travel by bus, or walk or cycle is ridiculous. If I give her a lift, I need to be able to park somewhere where she does not have to walk far.
C267	I agree with new built areas but not at Micheldever Station. We want to protect the village and its surrounding areas of natural beauty.
C273	Extreme framing bias in these closed questions.
C274	See reply to previous group of objectives. Growth should be focussed away from Winchester towards Nother and NE cities and poorer communities.
C276	Regarding the goal of focusing on people rather than cars. Cars will remain - they just change to electric versions. So the balance of rural, edges of towns relative to town centres needs to be controlled. I can envisage mum and dad driving their electric car to the town car park and the kids getting out their electric scooters to zip off into town to meet with their friends. Been happening all over Europe for years.... More people are taking electric bikes as well and electric vespa type scooters. So integrate all forms of the electric vehicles into the plans including the buses. (people will carry the lighter electric scooters onto buses)
C278	You can not focus on individuals, without focusing on their needs. To exclude private cars from your plan is ridiculous, as every household has at least two cars because public transport is not sufficient to rely on for work travel. New building developments should be made to include two parking spaces per house and a parking area for visitors. What currently happens is that only one parking space is provided per house and non for visitors, hence every new estate has cars parked all over the pavements. Once basic needs are catered for then yes it is important to made an estate that is more attractive to live on and has space to provide community spirit and healthy outdoor pursuits.
C282	Do not agree that the district needs to focus on becoming a thriving centre for education if the idea envisages a high student population for higher education. This results in education establishments competing with others to attract foreign students ,large student accommodation developments as in Portsmouth and Southampton. Vocational Educational establishments such as engineering, and Farming for the local population is a different matter and should be encouraged.
C290	I do not believe we need any more development at all.

C298	The comment has been removed as the respondent requested their response not to be published
C299	<p>1. All these points ignore completely the wider national context.</p> <p>2. See above for my comment on the mobility of everyone of all ages, interests, needs and abilities.</p>
C305	<p>In 70% of the district, people won't want to live in an environment that discriminates against private cars.</p> <p>"Balanced" tends to be a euphemism for making the roads inadequate for cars, rather than creating good roads, cycle-ways and footpaths. Much of Curdrige entirely lacks sidewalks, and there are no cycle- or bridle-ways at all.</p> <p>Recognize that the most attractive places in the district will command a price premium.</p>
C306	<p>Too many, too vague, unmonitored.</p> <p>Wishy washy wishy washy, far to broadbrush and 'worthy'.</p>
C313	I do not agree with the bias towards walking and cycling at the expense of driving. Car travel is preferred over these forms of movement.
C316	With regard to education, this seems to lack respect for the local environment, and always has. Children are big culprits when it comes to rubbish and destruction of trees. It is always obvious when schools return as the rubbish down Lower Chase Road also returns.
C317	Further large housing developments will be devastating to local environment and levels of traffic.
C326	I don't disagree with the principles behind any of the listed objectives. Achieving them is however another issue and questions about how they might be delivered emerge. To strengthen or create sustainable social development takes time. Empowerment of Local community groups need to be harnessed and supported by capacity building, outside a political structure. Large scale property development per se cannot achieve this.
C329	Yes the district is a thriving centre for education but this brings a huge influx of cars/travel every day with parents of school-age children especially driving some distance to the 'best' school.
C336	<p>Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021. The objectives should be drafted such that they provide a robust framework for assessing the local plan and the detailed policies and proposals. In particular they should enable the Council to undertake its assessment of how the local plan will deliver the overarching objective ie: carbon neutrality as currently set out or delivering sustainable development.</p> <p>CPREH considers that the over-arching objective for the local plan should be the delivery of sustainable development which could encompass the reduction in carbon emissions, but also the other key components of sustainable</p>

	<p>development and land-use planning i.e.; strong and competitive economy, meeting housing needs, supporting the community’s health, social and cultural well-being, protecting and enhancing the natural environment. Page 3 of 25</p> <p>At present the options provided later in the consultation in Issue 4 <i>Homes for All</i> do not appear to have been judged against either these 22 objectives or those set out in the Integrated Impact Assessment Scoping Report. Notwithstanding our comments above, we feel it important to point out some issues on the objectives as follows.</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Critically there is no objective which requires making more effective use of land, specifically brownfield land as set out in the NPPF 2019 Chapter 11</li> <li><input type="checkbox"/> There is no objective which mentions landscape, or ecosystem services that are provided by the countryside.</li> <li><input type="checkbox"/> Habitat connectivity has been omitted from the point on biodiversity.</li> <li><input type="checkbox"/> Settlement gaps should be protected, and coalescence prevented</li> <li><input type="checkbox"/> Living over the shop and the new role of the high street should be incorporated into the objective on high streets.</li> <li><input type="checkbox"/> There is no mention of affordable housing, or social housing.</li> <li><input type="checkbox"/> The transport objective fails to highlight the importance of mass public transit hubs, particularly the rail network, as being a significant way of minimising car travel.</li> <li><input type="checkbox"/> An objective on reducing the embodied carbon costs of new buildings and roads could usefully be incorporated.</li> </ul> <p>CPREH is campaigning for a South Hampshire Green Belt. PfSH has supported the principle of a Green Belt and the case for such a designation is included within its work stream on its Joint Strategy. The protection of the integrity of the settlement pattern in South Hampshire, including that part within Winchester District should be a key objective. The new local plan should include policies which retain the character and setting of the towns and villages in the District and to designate a Green Belt. CPREH believes this should be incorporated either in the Vision or the Objectives.</p>
C342	<p>There needs to be emphasis on the type of housing required, eg. affordable housing and housing for older people, allowing a provision of accommodation for all generations in the community</p>
C343	<p>Some of the objectives, that we have not ticked, need to be more precise if they are to be certain to achieve carbon neutrality. We would like the intention of achieving carbon neutrality to be explicit in every objective.</p> <p>In the ‘active participation objective’ add “and provide infrastructure such as allotments, meeting spaces, and activity</p>

	<p>areas to support this.”</p> <p>In the ‘create communities’ objective add “and that offer easy access to affordable low carbon essentials, especially food.”</p>
C346	<p>"Support the district's role as a thriving centre for education which integrates with the resident population" isn't consistent with growing work opportunities for residents, except Deliveroo couriers, not residents' wellbeing. Large student populations do not integrate with the resident population, whether in Winchester or anywhere else. Large student populations take housing which could be used by young working residents and families. They bring little economic benefit to the town.</p>
C347	<p>See answer to Q4 in this section</p> <p>The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</p> <ul style="list-style-type: none"> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C348	<p>See answer to Q4 in this section</p> <ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock. • Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence. • There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C352	<p>The objective ‘...develop a built environment that is focussed more on people than private cars...’ is potentially a short term issue given the progressive move towards electric cars by 2030. Public transport is currently expensive and not as convenient as using cars for many people not in city centres. A key factor impacting the decision for people to drive rather than take public transport is the cost. It is referenced that car parking charges will be increased in the city and yet no reference is made to the cost of public transport. The current cost of a family travelling by bus is expensive and likely to lead to people either continuing to drive or visiting the city centre less frequently. Is there a longer term plan for when the sale of new cars switches to electric only to take this into account?</p>

C356	If you eliminate driving without improving the public transport and park-and-ride system then you make it impossible for the outlying communities to come to the city and we will go elsewhere to shop, work and play.
C362	The comment has been removed as the respondent requested their response not to be published
C365	Where I have withheld ticks it is because I believe more thought needs to be put into ensuring that the objective can reduce CO2 emissions, however well-intentioned. For example the education objective needs to specify that the arrangements for education must be zero-carbon, using low-carbon energy in the buildings and low-carbon transport.
C371	I don't disagree with the sustainable social development objectives, but as a local resident I would like to take the opportunity to raise the point, that we currently have very few opportunities for socialising with other members of the community within my postcode. There are very few parks with recreational facilities, cafes, pubs, restaurants or other communal leisure spaces and therefore any future development should take this into account and rectify it.
C375	A distinction should be drawn between 'homes to meet the identified need of our communities' and homes which simply facilitate the migration of population from other areas.  Supporting education is important but consideration should be given to the appropriate size of the student population should be. Some university towns are overwhelmed by their student populations.
C378	There is too much focus in this document on walking and cycling. For most people these are primarily leisure activities. Desirable, but should not be confused with transport for working and economic reasons.
C379	In most cases, I find it difficult to differentiate between options 1,2 or 3.
C388	These all sound great - so need to move beyond words. Any new developments should be assessed against these criteria.
C394	Why do we always need to focus on growth? We should concentrate on improving the lot of those that live here, not on attracting more growth until the surrounding countryside is covered in bricks and mortar.
C410	Protecting and enhancing open spaces means not permitting green land to be developed for massive housing estates
C413	City centres are great places to live without the need for a car and the way to do that is to have more, higher density housing in the middle of towns. When you have a large suburban area and surrounding villages I don't know how you think you can discourage car ownership. My village has a very poor bus service and I consider the B3047 too narrow and scary for cycling. There is no park and ride scheme I can use to come in to Winchester without driving significantly further than I do just to get to the city. How exactly do you suggest that I get to Winchester to access shops and services?  My preferred option is to park at the Rugby Club and walk in but this doesn't work if I want to buy lots of items in the shops.

	If you take away all the city centre parking I would just have to drive further to go somewhere else to do the bulk of my shopping, perhaps to one of those out of town development you also don't like.
C416	Where are these green spaces? In the country of course but in our towns?
C428	Social development objectives should include that developments are sensitive to existing communities and that developments should integrate with existing communities and minimise creating communities from scratch.  Could also include an objective on developments utilising existing communities e.g. through regeneration of brownfield / previously built upon sites.
C429	I would add an objective which highlighted the value that countryside can bring to people's health and wellbeing - a point proven over the past year. I would add an objective specifically about the provision of affordable housing.
C437	There is a lack of schools and facilities in many local villages meaning children either have to be bused or taken by car to their nearest school or college. This is contamination of the environment for at least another 10 -15 years until all transport is electric. shops are also falling away and some villages have none to go to for small items or top ups.
C452	Again, all the right ideas - every community across the world should be embracing but it's how they are implemented  Winchester has a poor carbon footprint. Disgraceful given the heritage, locality and wealth of the city. Croydon has implemented a far better recycling scheme for over 10 years.
C461	I agree with the objectives but do not have sufficient understanding to comment on if they reflect the key issues that are facing the district or if they support the fundamental aim of the Local Plan to achieve carbon neutrality.
C462	The transport objective seems too timid and does not reflect the urgency in achieving radical change by 2030. The use of the word 'balanced' needs to be changed.
C463	Proposing the development of large open green space does little to support these objectives.
C469	It is clear that the envisaged proposals for new homes will not be sufficient to meet carbon neutrality.
C475	We do not need any more houses or people in this already overcrowded area
C482	The lack of attention to the rural community issues is shocking in the above answers
C491	I do not agree with the unrestrained expansion of the University. It is destroying communities socially and environmentally. Jobs provided by the University are mainly low income (cleaning, security etc) or unsustainable service industries such as letting agents and expensive uncontrolled private letting. Students are allowed to bring

	cars into an area where the majority of them can walk to local amenities (their cars are used mainly for journeys to local shops under half a mile away).
C493	Trying to deny the utility and the economy of the private car is having a distrastrous effect on many new and recent developments. The congestion caused by not allowing for the private car is producing a living hell in many areas. The constant evolution of family life means that the inflexibility and cost of public transport soon falls short.
C494	You cannot answer the second and third options without detailed understanding and knowledge.
C514	We need housing for the local younger population, not houses with more than 2 bedrooms. We do not need any more Higher Education developments, we are already exceeding saturation level. I do agree with more emphasis on green spaces and community hubs.
C516	Add “access to good food” when it refers to creating a healthy environment within the district  Include “all new developments provide spaces for growing food “  'Economic growth' should only apply to green jobs and infrastructure if it is to support Carbon neutrality
C523	Social development should not be something the council try and achieve. This is where we enter the nanny state
C532	Sustainable development must have food as a key element of social development; NHS Healthy New Towns programme (2018) recommends 10 principles so that health and well-being can be planned and designed into new places. One of these principles is to inspire and enable healthy eating. It says that “Enabling people to eat a balanced and healthier diet, and making it easy and affordable to do so, are key to tackling health inequalities and improving environmental sustainability.”
C535	Whilst not disagreeing with the objectives as set out the Winchester Food Partnership think the following points should apply:-  1. Add “access to good food” when it refers to creating a healthy environment within the district  2. Include “all new developments provide spaces for growing food “
C542	It seem unlikely given the local geography that cars will not remain an essential mode of transport in the region. There is of course scope to improve public transport, but, given the low population denisty in some areas, it seems unlikely this can be done economically to a degree that displaces the car. The same applies to EV infrastructure (although the council should also be mindful of the ethical, environmental and geopolitical risks associated with an EV policy, something which central Government is currently overlooking).

	<p>The development of a fast and resilient broadband infrastructure is vital, as this both supports local business and education, while also creating an alternative to road travel.</p> <p>A plan to re-surface roads with quieter materials should be a requirement for all new resurfacing works close to homes.</p>
C556	The main ones I disagree with are the development of new housing. Areas of Greenland should not be built on with the objective of creating space for communities. They should be left green to leave countryside for communities
C561	Why does Winchester need to become a thriving education centre? What is the justification especially with the growth in on-line learning.
C566	We are very concerned that there are hardly any buses and less parking. Those of us living outside of the centre are not necessarily able to cycle or walk.
C574	Words, words, words. I suggest you try to think of actions, not words.
C576	<p>some good ideas but you have to live in the real world where people also want to drive. If you make it difficult for people to move about (by car) they will quite often go elsewhere to spend money. A lot of people for various reasons, will not walk or bicycle. They will go online for ease I imagine. That will be a loss all round.</p> <p>Build on brownfield sites - that is more intergrated. Leave the countryside as countryside.</p>
C578	<p>In objective 1 we would prefer to see the wording:</p> <p>'achieve a transport system that:</p> <ul style="list-style-type: none"> <li>- prioritises sustainable transport modes particularly walking, cycling and public transport;</li> <li>- tackles the problems of unnecessary car travel and commuting;</li> <li>- ensures that everyone has a real choice.</li> </ul>
C580	see above comments on environmental objectives
C584	<p>Again these objectives may sound good but so far there appears to be little in detail to believe there is a real intention to achieve them. Eg putting a bus station/hub outside the centre of the City may be a good idea but how are the less able to get to and from the centre. Park and ride will do little to help reduce carbon foot print. What is being done to provide a decent regular bus service from the rural villages?</p> <p>What is being proposed to provide decent and separate cycle and walking routes into Winchester?</p>

C586	This sustainable objective does not at first glance appear to support carbon neutrality. If we revert to old practice, studying to get a good job, then commuting to a high paid job, or overseas may be improved with better use of IT in future. There may be an increased interest in studying locally after lockdown. We need to make sure our housing and communities support all residents.
C590	I don't know what you mean by point 4. It looks fairly meaningless,
C593	The link in Q2 between housing provision and economic growth has not as far as i aware been established. The drivers for the two appear to be separate. This is an important misconception and should be the subject of a specific study to inform it. The recognition that residents whether existing or new do not prioritise a house near to a job will free up the Planners thinking on the locations of work and dwellings and the links between the two.
C594	I would like this to have an explicit tone of 'we are doing this for each other', to develop across the District an ethos, at least an ethos, of mutuality, rather than being 'done unto' or 'facilitated' or 'enabled'. Asset-Based Community Development has ideas in case the council is a bit stuck.
C595	The comment has been removed as the respondent requested their response not to be published
C597	Please see representations made to Planning Policy, submitted in PDF form.

#### 4: Do you have any other comments about the sustainable development objectives?

##### Do you have any other comments about the Sustainable Development Objectives?

Respondent Number	Respondent Comment
C2	no
C8	Tell me what sustainable transport means. It's a meaningless phrase in my view. Buses, trains and cars run and move. That's all.

C11	I think it needs rather more emphasis on suitably priced homes (for renting and buying) for less well paid workers - especially those who are crucial to the city and should not have to travel from cheaper areas to get to work (eg cleaners, hospital porters , carers, shop workers).
C15	You could be more ambitious, and go even further and encourage residents to take an active role in creating green spaces such as vegetable growing, community orchards, growing spaces for all ages. Also, why are some front gardens or areas around flats always only short mown grass? They could be wildlife habitats.
C17	Great in theory but a reality check of what is actually possible within the claimed timescale is needed.
C19	You should not encroach upon existing green open spaces such as between Oliver's Battery and Hursley
C20	Communities should have community hubs of some sort. These should be places that have a widely filled activity agenda and support for the elderly and poorer members
C21	Important to recognise that the area to the north of Winchester provides an important and beautifully rural gap between the London metropolis with urban sprawl out to Basingstoke and South Hampshire with its urban sprawl stretching up to Winchester and Three Maids Hill. Please protect the rural aspects north of Winchester.
C23	There is a lack of recognition of the role of supporting infrastructure to meet the existing and future needs of the local population and local communities. For example, water resources are under significant threat and significant new infrastructure is needed to ensure that there is environmental protection, and secure supplies for customers. The same is true in other utility sectors. The Plan should have as an objective the facilitation of new infrastructure to support existing and future needs.
C26	I believe the objectives are admirable but will not be delivered in reality.
C31	Build only on Brownfield sites, not on green fields such as Hursley.
C32	Post Covid-19 our habits and needs have changed, this needs to be considered more across this entire section.
C33	<ol style="list-style-type: none"> <li>1) Protect green space for the benefit of this and future generations</li> <li>2) Protect agriculture land so as a nation we can minimise the need for further imports and the carbon consequences of transporting commodities</li> <li>3) Consider the need for using the existing open space for carbon offsetting rather than places to build on</li> </ol>
C36	This has many & very different components such as mental health, sufficient water supply, climate change & carbon neutral that are not of equal importance. The deliverability of the objectives has not been considered & is not equal for each one.
C38	No

C40	This is not an open consultation. It feels as though you want us to agree to surface specifics and use that to parade support for YOUR underlying objectives.
C43	Don't build out in the villages to an extent that significantly increases the village size. The infrastructure cannot cope not only transport but water /sewerage /power etc is already on the limits of capacity
C46	Increase shared use walking/cycling etc where each has to be considerate to the other.
C53	No
C54	More direct language in fewer words word lead to greater clarity of purpose. The overall objective should always be to aim, as far as possible, for zero greenhouse gas emissions (whether from carbon dioxide, methane or nitrous oxide).
C58	There is a lot of piecemeal development going on. Usually developers are constructing building of little architectural imagination using building methods that are energy inefficient with high embodied carbon.
C59	Please ensure we never have another Barton farm in our district.
C63	The underlying problem of traffic is rightly recognised as difficult. The city is small and compact enough for fit people to be able to walk betewen sites. However 1) There needs to be better pedestrian linkage between historic and other sites of interest. 2) Adequate provision needs to be maintained for access and parking for the elderly and disabled. 3. The range of significant tourist attractions needs to be emphasised and developed 4. It should be ensured that access to the city for travellers by rail should be attractive and convenient.it should not be overwhelmed by overlarge development
C75	All fine words but the Winchester district has developed over the last 150 years to support wheeled transport. Leading to a very dispersed communities that today are dependent on the car. Compounded by the geography consisting of hilly chalk downland surrounding water meadows and a river protected by a SSSI. Plus a roman/ medieval layout of the town centre which gets choked with traffic, much of it through traffic avoiding M3 and A34 congestion. Winchester was a notorious traffic bottleneck in the 1930s and nothing much has changed!
C78	I think these objectives are noble, but are very broad and completely setting out specific targets and goals that the district is trying to address. For example 'positively contribute to carbon neutrality by 2030' There is very little detail in these objectives about how that will be measured and what will be prioritised as part of this. Does it mean just planting more trees? Does it mean all city energy will come from renewable sources? Does it mean that non-electric vehicle will be banned from the city centre. And how will you ensure measurement? I fear this will just fall into green

	washing especially as there appears to be a focus in certain areas of the plan to develop greenfield sites, for no real reason.
C81	Sustainability must not be the only criteria for consideration when allowing major developments
C87	Concentrate on redeveloping the city centre to take account of changes in work patterns / commuting, reduced retail and promote more residential living in the city centre.
C88	One of the most important things is the keeping of open spaces for well being and good health, we are constantly being advised by the Government to get out and walk and enjoy nature, this will not be possible if we cover green spaces with buildings.
C95	The objectives are great but it feels like they are being ignored when developments are being considered
C100	I vehemently oppose the development of Royaldown to the South of Winchester. I believe it would be detrimental to many of the objectives above. I also vehemently oppose the removal of full hospital services including A&E if this comes about by the proposed new hospital in Basingstoke.
C108	The building of residential properties on agricultural land / fields I believe this is called encroachment and is ruining our countryside
C113	They align perfectly with site opportunities that are suitable for sustainable village extensions
C114	Existing green field sites, such as farm land, or recreation space must be excluded from building development Farm land is required to help feed the nation and green recreation spaces, regardless of whether they are publicly, or privately owned, are necessary for the wellbeing of the population.
C116	The comment has been removed as the respondent requested their response not to be published
C119	The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock. Vision for the District <ul style="list-style-type: none"> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role.</li> <li>• Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified.</li> </ul>
C123	no

C125	I disagree with the councils proposed development plans on greenfield sites especially Micheldever Station. The development should be made in areas directly on the edges of the City of Winchester, rather than within a shrinking green belt between Basingstoke and Winchester.
C127	Increasing the number of bus routes and frequency of busses to connect rural villages to each other and town centres. Increase park and ride options, especially for north winchester. Increase use of hydrogen busses as a more carbon neutral transport option.
C136	Too much emphasise is placed on Carbon Neutrality . It is an important issue but not the key issue . Yes lead from the front but it makes no difference unless the whole country is on board
C139	I think the anomalies in the current boundaries of the settlement areas should be addressed. I am thinking in particular of the boundary of Waltham Chase along Clewers Hill which is uneven illogical, and unfair.
C144	There is too much emphasis on Carbon Neutrality. great aspirations but to achieve them by 2030 is both unrealistic and unachievable . timescales need to be the same as the National guidelines and manageable. This subject appears to be the main aim of the Local plan when surely the focus should be on building new homes. Carbon neutrality should be part of this programme and not the lead.
C148	no
C149	Population growth with more homes, more work places etc is always going to be somewhat in conflict with environmental sustainability, biodiversity concerns and carbon neutrality. There are limits to growth.
C150	They are out of date for a post COVID and future remote working world
C155	The most important aspect of any development must be that it is focussed on brownfield sites and protects our wonderful local landscapes and natural habitats. In particular, the chalk downs to the south of Winchester need to be protected with a Green Belt. The proposals for Royal Down and South Winchester Golf club would lead to a catastrophic loss of green space and natural habitat which would irrevocably change the character of the district, in addition to increasing flood risks in Pitt, Hursley, and hugely increasing the traffic congestion which is already endemic along Romsey Road. As part of their commitment to sustainable development and carbon neutrality, the council should implement the green belt immediately and state that these areas will not be approved for development. The district has many suitable brownfield sites (such as Sir John Moore Barracks and the city centre) which can be sustainably developed in order to meet local housing needs without sacrificing our natural landscape.
C156	The most crucial aspect of any development must be that it is focused on brownfield sites and protects our incredible local landscapes and natural habitats. In particular, the chalk downs to the south of Winchester need to be protected with a Green Belt. The proposals for Royal Down and South Winchester Golf club would lead to a catastrophic loss of

	<p>green space and natural habitat, which would irrevocably change the character of the district, in addition to increasing flood risks in Pitt, Hursley, and hugely increasing the traffic congestion which is already endemic along Romsey Road. As part of their commitment to sustainable development and carbon neutrality, the council should implement the green belt immediately and state that these areas will not be approved for development. The district has many suitable brownfield sites (such as Sir John Moore Barracks and the city centre) which can be sustainably developed in order to meet local housing needs without sacrificing our natural landscape.</p>
C160	<p>Among the excellent overlapping objectives are (Environmental) 'Strengthen and create healthy communities that are connected, with easily accessible open spaces and green / blue infrastructure, and support sustainable travel choices including walking and cycling'; (Economic) 'Support and ensure that new development is served by the appropriate infrastructure including cycling and walking, public transport...'; and (Social) 'Protect and enhance open space and community facilities as spaces for social engagement and community building/ empowering neighbourhoods; ensure new developments provide spaces for social interaction and the building of new community networks'. None of these can be easily retrofitted to rural and semi-rural contexts. And the build-field-by-field approach of LPP1 and LPP2 has hampered their development by encouraging commuting by car. There is no space and no resources to develop safe footpaths and cycleways in areas such as Shedfield. Only larger scale new developments can effectively meet the new objectives.</p>
C163	<p>Apologies if these comments are in the wrong section.          Planning restrictions to preserve the barrier between villages in the South of the district is important to me. Provision of additional GP services in those villages which are expanding should be considered - this will reduce unnecessary car journeys and impact positively on pollution.          I don't know which part of the survey this should go in, but I would like Winchester to drastically increase its recycling processes to recycle more of our rubbish - could we aim for top of the league table?          I have found this survey to be very hard to navigate around and the questions to be very wordy and unclear. I am unsure of how accessible it is to the majority of residents and this concerns me.</p>
C164	<p>its needs to be clear - create green spaces, not building on green spaces.</p>
C168	<p>Among the excellent overlapping objectives are (Environmental) Strengthen and create healthy communities that are connected, with easily accessible open spaces and green / blue infrastructure, and support sustainable travel choices including walking and cycling; (Economic) Support and ensure that new development is served by the appropriate infrastructure including cycling and walking, public transport...; and (Social) Protect and enhance open space and community facilities as spaces for social engagement and community building/ empowering neighbourhoods; ensure new developments provide spaces for social interaction and the building of new community networks. None of these</p>

	can be easily retrofitted to rural and semi-rural contexts. And the build-field-by-field approach of LPP1 and LPP2 has hampered their development by encouraging commuting by car. There is no space and no resources to develop safe footpaths and cycleways in areas such as Shedfield. Only larger scale new developments can effectively meet the new objectives.
C176	no
C177	As detailed elsewhere, a new green belt on the southern parishes border around Hursley and Olivers Battery would protect these crucial areas
C189	See previous response There should be a box to tick to disagree with the above questions. a'loaded' presentation
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.
C192	Objectives are fine but the plan should support them and it doesn't at present. For example the outlying transport system which is listed as a key objective is being reduced rather than improving. Just look the public transport service from Oliver's Battery to the centre of Winchester. No wonder we all have to drive. And what about the (longer term) plan to build a new hospital at Dummer and close Winchester's A&E. It's been clearly identified that the first few minutes of health care can often be critical in saving lives. You talk about the importance of healthy communities and easily accessible open spaces yet at the same time seriously consider going ahead with the RoyalDown development.
C194	Sustainability and carbon neutrality are "hygiene factors". We must achieve them but they aren't enough. Without dynamic businesses, we will become simply a dormitory for workers from other areas, which will prolong the problems of commuting and car based households. Therefore, it is essential to create a supportive environment for business - especially for young people. Where are the incubator hubs and affordable premises where these businesses can flourish?
C197	I would like too see more emphasis placed upon reduction of city centre traffic and all non electric cars and commercial vehicles restricted from the city centre during core working hours.
C198	No
C208	All new developments outside the old city need to have provision for charging electric vehicles. This is not a requirement in the current plan, and will result in difficulties as internal combustion vehicles are supplanted in the early part of the life of new dwellings.

	<p>It is not necessary to install chargers on every parking place, but houses should have garages or adjacent parking where possible, and remote parking places should be cabled so that chargers can be added.</p> <p>Unless a footpath provides a shorter alternative to following a road, that road should be provided with a sidewalk.</p> <p>Ideally, new roads should be wide enough for cycles to have a marked-off area of metalling, avoiding the dangers when cycle share with pedestrians or motor vehicles.</p>
C220	<p>See box above</p> <p>Anyone would agree with these objectives, but what if they conflict with one another? Is it really worth commenting on such a generalised wish list?</p>
C222	<p>The comment has been removed as the respondent requested their response not to be published</p>
C224	<p>THE DEVELOPMENT WOULD NEGATE ALL THE ENVIRONMENTAL OBJECTIVES</p>
C226	<p>The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</p> <ul style="list-style-type: none"> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role.</li> <li>• Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified.</li> </ul>
C227	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role.</li> <li>• Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified.</li> </ul>
C229	<p>Green spaces between villages must be maintained to avoid "sprawl" and increase amenity, tranquility and recreational value</p>
C231	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role.</li> </ul>

	<ul style="list-style-type: none"> <li>• Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credibility.</li> </ul>
C234	Like motherhood and apple pie. Few people would disagree with objectives but what is important is how they might be achieved, potential negative as well as positive benefits and cost to environment which with more development for housing and business is inevitable. Older population will not be able to walk or cycle far and aims will need to be realistic.
C236	Sustainable needs to be defined for it to be a useful test. Carbon neutrality is very important, however, should not be the only environmental criteria to test against. The local plan provides an opportunity to rectify previous environmental damage through, for example, encouraging use of brownfield and previously built on sites in the first instance and should be used to encourage such initiatives.
C239	Winchester's heritage buildings and landscapes need to be adequately supported, given their importance not only historically but in generating cultural events and tourism.
C243	Reduction in inner town car parking capacity would be a big mistake, with zero emission cars becoming the norm the freedom to either park and ride or use city centre car parking suits different needs and provides choice.
C244	Rural residents visiting market towns/ Winchester City need carparking facilities as there is no public transport available to many and distances are often too far for walking and cycling .
C248	It needs to be practical and Not cater to a requirements seemingly generated by a small minority of objectors .
C252	Action on methane, not just carbon. Methane tonne for tonne is 86X ore damaging than carbon dioxide.
C253	The Local Plan should be delivering sustainable new development, representing only a small proportion of the majority of overall building stock. It is unrealistic to aim to make 100% of the District carbon neutral by 2030 via the Local Plan, nor is it the Local Plan's role. The UK national objective is 2050 so whilst it can be considered admiral to go for such a tight time-frame (which would only be 7 years after the Plan's adoption) it is just not credible. An extensive list of sustainable social development objectives is suggested many of which cannot specifically be measured. These should therefore be simplified.
C256	Royaldown Garden Village is a completely inappropriate dewscription. It is a large housing estate and not a garden village. It will not be a sustainable development for the area.
C259	Focus on rejuvenating urban centres, and balance the eco-arguments against the needs of people.
C262	The fundamental objective of a local plan is to deliver sustainable new development which will represent only a small proportion of the majority existing building block. It's an ambitious plan which puts a lot of strain on delivering sensibly.

	This plan is rushing it all-there are too many objectives, many unmeasurable, which are repetitive and could be simplified.
C267	No development at Micheldever Station.
C272	Too much emphasis on development, implying expansion, rather than making the best of what there is.
C274	Many of the objectives and not compatible with the need for Carbon neutrality. Better use of previously used land and Brownffied sites are NOT so far really considered in the objectives . I note there is not seen a need to consder land use in teh City in amore imaginative way to contribute to the overall need for Cardon neutrality- The Councillors seems to imply that they know best and other other places have nothing to teach us.
C278	Again I can only repeat that what works for city life does not work for rural and farming life. Winchester has to face up to the fact that if rural areas are covered under their care, they need to adopt a different plan for those areas. Denmead Parish Council has had a plan for some time and Winchester should respect and take notice of the suggestions of the people who live in the rural areas. I am more than happy to discuss further.
C280	No
C282	With the trend for home working ,and the popularity of Television programs promoting life in the country, rural developments consisting of 4 plus bedrooms ,two studies double or treble garages with no access to public transport should be rejected. We need small developments for local young families for them to remain in their villages and market towns and help re build their communities. My other comment is that plans for sustainable development are only as good as enforcement and unlawful developments should be removed not legalised by negotiation with the planning officers.
C290	I am of the view that our councils and councillors should be looking for ways to protect our historic. Villages from this urban spread.
C292	The goal of a carbon neutral district by 2030 is very ambitious and unlikely to be achieved unless SMART goals are set and it is closely monitored.
C293	These objectives appear to be primarily relevant to the urban areas of the district. More focus on the transport links between urban and rural settlements and how to connect rural communities with public services should have greater prominence.
C298	The comment has been removed as the respondent requested their response not to be published
C299	See my comments above.

	<p>1. All these points ignore completely the wider national context.</p> <p>2. See above for my comment on the mobility of everyone of all ages, interests, needs and abilities</p>
C304	<p>We should be aware that cycling and walking in and out of Winchester often entails steep hills and ,though the distance may not be great and thus may comply with guidelines , take up by the public will also not be great because of the hills .</p>
C305	<p>All new developments outside the old city need to have provision for charging electric vehicles. This is not a requirement in the current plan, and will result in difficulties as internal combustion vehicles are supplanted in the early part of the life of new dwellings. It is not necessary to install chargers on every parking place, but houses should have garages or adjacent parking where possible, and remote parking places should be cabled so that chargers can be added.</p> <p>Unless a footpath provides a shorter alternative to following a road, that road should be provided with a sidewalk. Ideally, new roads should wide enough for cycles to have a marked-off area of metalling, avoiding the dangers created when cycle share with pedestrians or motor vehicles.</p>
C309	<p>It is agreed that all the objectives are useful and relevant. They should help to achieve the goal of carbon neutrality in Winchester District.</p> <p>However, there are no objectives to channel the delivery of residential or how it could help achieve the ultimate goal. The objectives miss the fact that the driving force behind development and carbon neutrality in the district will be residential development and the financial input it can provide in achieving a goal. And now that many more people will be working from home in the future, where new homes are delivered will dictate where a lot of people work.</p> <p>Winchester as a district had 116,600 at the 2011 census, only 45,184 of which lived in Winchester itself. That means a significant majority of the local authority’s population live outside of the city in the Market Towns and Villages. Many of which, before the pandemic, commuted to nearby cities like Winchester, Southampton and Portsmouth to work. However, they should now be encouraged to work local and reduce carbon emissions. Objectives should look to make these settlements more sustainable by delivering more housing and allowing commercial growth to follow. An objective should also encourage development proposals with the most sustainability benefits to come forward first.</p>
C314	<p>The overarching objective of a carbon neutral District by 2030 is very ambitious and probably very expensive.</p>

C316	<p>Good objectives if it can be achieved, but construction of housing generally doesn't take into account and isn't designed for real living, with no garden space and no real space for any hobby that takes a little room. No wonder people spend most of their time saving money so that they can go away on holiday to get a bit of space.</p>
C317	<p>Further large housing developments will be devastating to local environment and levels of traffic.</p>
C318	<p>To be sustainable, you need to put a stop to future developments like Royal down. It goes 100% against everything you write above.</p>
C321	<p>Education is such a core part of all this. How are you going to educate the community about sustainability and the importance of it?</p> <p>As I said above, the objectives without targets in place feel pretty flimsy.</p> <p>Could more cycle routes be set up between towns to enable safer commuting? When I worked in Southampton, the commute there on bike from Winchester was truly terrifying. I went back to driving because I felt too unsafe. If more cycle routes could be established then I think you will naturally get more people cycling, much like Holland.</p>
C323	<p>Thakeham believes that making significant advances to reduce the impact of climate change requires zero carbon placemaking to be at the fore of all development design. Our vision is to create connected and walkable safe communities, with high quality links between our sites and surrounding destinations, to encourage healthy lifestyles, minimise reliance on private car use, and reduce impacts on the environment.</p> <p>Thakeham is one of only 12 developers and housing associations nationally to be accredited by the NHS Healthy New Towns Network and we embed those principles and philosophy in all our developments. For example, layouts facilitate and encourage cycle and pedestrian use and makes it difficult for road users by using the following sustainable travel hierarchy:</p> <ul style="list-style-type: none"> <li>• Walking and cycling routes will have priority crossing over vehicles</li> <li>• Bike maintenance stations and easy cycle storage with charging points</li> <li>• Access to public transport with access to community travel</li> <li>• Fast electric vehicle and cycle charging points and easily accessible secure storage.</li> </ul> <p>We facilitate homeworking/within-community working so reducing commuter miles, our homes accommodate the desire/requirement to work from home (learning from the recent pandemic experience)and we provide ultra-fast broadband within our developments.</p>

	Thakeham is committed to ensuring all our developments include a Biodiversity Net Gain of 20% exceeding Government's target of 10%. We also believe in the importance of early delivery of infrastructure especially community facilities which are key to ensuring a reduced carbon footprint from residents so that they change their behaviour patterns as their physical environment positively encourages and facilitates these changes.
C325	THEY SHOULD BE CONSIDERED VERY CAREFULLY
C326	see above comments. I personally believe that WCC should first look at existing communities and in-progress developments such as Barton Farm... Surely, WCC cannot justify from an environmental perspective any more large, blot on the landscape, development
C327	The objective of a carbon neutral District by 2030 is very ambitious. The achievability of this objective will need to be closely monitored to prevent undermining the new Local Plan.
C331	Aiming to make the District carbon neutral by 2030 is totally unrealistic, given that most emissions, transport and energy, are beyond the control of the council.  There are too many objectives, many unmeasurable, which are repetitive and could be much simplified.
C335	Restrict large scale green field building projects
C336	Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.
C341	The objectives are fine, the question is how to deliver.
C342	There needs to be more emphasis on the new climate change and biodiversity policies
C343	Although all these objectives are good, the plan needs to contain more requirements for how they will be implemented in a way that is certain to reduce CO2 emissions. If there are loopholes, developers will exploit them.
C344	The comment has been removed as the respondent requested their response not to be published
C347	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C348	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> </ul>

	<ul style="list-style-type: none"> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role. Carbon neutrality for the entire district by 2030 (i.e., only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence.</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified</li> </ul>
C351	We need a Green Belt to protect our settlement gaps. We should use brownfield and previously developed land first before greenfield development.
C352	<p>We need to protect and enhance open spaces, but also to provide a new, large open space (parkland) for significant adult exercise use: cycling, walking, running, skating, fitness trails – the size of South Winchester Golf Course/HCC Farm along Badger Farm Road.</p> <p>The demographics of Winchester reflect an older and aging population. We need to develop more workspace and more affordable living accommodation (flats) in the city to revitalize it, bring young people in and give the next generation growing up here an opportunity to afford to buy in.</p>
C353	All this seems good but hugely ambitious. At the next stage of developing this plan, and to plan well, the council will need to be realistic about what it can and cannot influence, and perhaps be prepared to invest in more of a wider influencing role than in the past.
C356	Our economy is fragile and our future is uncertain. Sustainable development is restrictive and expensive for houses and offices. They are definitely necessary in the longer term but if you impose them too soon you will push developers elsewhere. There should also be much closer communication with the people who can make this happen: the landowners and the developers. Currently you show scant disregard for our proposals.
C361	<p>The over-arching objective for the local plan should be the delivery of sustainable development which could encompass the reduction in carbon emissions, but also the other key components of sustainable development. There should be explicit objectives on:</p> <ul style="list-style-type: none"> <li>• making more effective use of land, specifically previously developed (brownfield) land</li> <li>• protecting settlement gaps and preventing coalescence</li> <li>• the new role of the high street</li> <li>• affordable housing and social housing</li> <li>• the protection of the character and setting of the towns and villages in the district</li> <li>• designating a Green Belt in the south west of the district</li> </ul> <p>Because the overarching objective of a carbon neutral district by 2030 is very unlikely to be achieved, the new Local Plan may be seriously undermined.</p>

C364	<p>Presumably the aim is simply sustainable development in the community which is not limited to these objectives. If these are to be set how are they to be measured.</p> <p>Has an assessment been done as to what is required achieve carbon neutrality by 2030. Achieving this in such a timeframe is probably going to be difficult in the context of sustainable development. Is this one of the key risks facing the district?</p>
C365	<p>Sadly, it may be necessary to find ways of expressing explicit ways of ensuring carbon reduction methods of development; otherwise developers will find ways round the intention of the local plan.</p>
C371	<p>See above.</p> <p>I don't disagree with the sustainable social development objectives, but as a local resident I would like to take the opportunity to raise the point, that we currently have very few opportunities for socialising with other members of the community within my postcode. There are very few parks with recreational facilities, cafes, pubs, restaurants or other communal leisure spaces and therefore any future development should take this into account and rectify it.</p>
C372	<p>The sustainable development objectives of the Local Plan should be Specific Measurable Achievable Realistic and Timely (SMART). For example, the overarching objective of a carbon neutral District by 2030 is this realistic and achievable? What clear and positive actions need to be taken to acheive this otherwise, the new Local Plan will be seriously undermined.</p>
C376	<p>I would like to see development of all possible brownfield sites BEFORE the development of greenfield/farming land.</p> <p>I am a keen cyclist but feel that many people are put off cycling by the danger of cycling on busy roads such as Badger Farm Road (part of my commute) &amp; Romsey Road.</p> <p>I am very concerned about diversity and the dying out of animals such as hedgehogs and the planning requirement for only dismal provision for wildlife such as migrating birds (eg swift bricks in new developments such as Kings Barton)</p>
C379	<p>I would support managed sustainable growth in existing communities, but not large scale greenfield development which, having been established has a propensity to continue growing way beyond its original boundaries. Developers do not care as much about farming, countryside and our diminishing wildlife as they do about money in their pockets.</p>
C388	<p>Only that action is needed to make the objectives a reality!</p>

C394	Define sustainable development. Almost every dictionary definition of sustainable relates to being able to continue at the same level for a period of time. Sustainable development is therefore an oxymoron.
C396	To be sustainable development must be combined with the ability to walk, cycle and use an integrated public transport system with transferrable ticketing.
C397	Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined. The objectives of the Local Plan should be SMART.
C398	it would be helpful if in pursuing these objectives all opportunities to develop brown field sites, perhaps multiple small scale developments rather than enormous new developments, were progressed / supported as a priority and that development of farm land / green field sites were not progressed - as the distinctive and attractive nature of the local area is being undermined by the erosion of farm land. The development of Abbots Barton demonstrates how beautiful open farm land which supported deer and other local wild life has been reduced to an unattractive, sprawling development of a small number of houses affordable by only a few and has resulted in more pressure on local amenities.... whereas the development of the new, sustainable council houses in Stanmore have enhanced the area without any reduction in access to open land.
C399	Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined. The objectives of the Local Plan should be Specific, Measurable, Achievable, Realistic and Time-bounded (SMART).
C406	Keep the green belt free from housing development Use brown field sites Do not let out countryside be ruined for ever by one farmer trying to make his millions
C407	As we come out of the pandemic I particularly agree with the following objectives and feel our green spaces should be prioritised - they were valued before but we now value them even more highly:  Aim to create communities that are focussed on green spaces, reduces health inequalities and creates a healthy environment in the district by having good access to services, schools and facilities within walking distance  Protect and enhance open space and community facilities as spaces for social engagement and community building/empowering neighbourhoods;
C408	If WCC is going to meets its target on becoming carbon neutral by 2030 (9 years only to do this), then that needs to be closely monitored to ensure it is achieved.

C414	Brownfield sites should be taken into consideration first
C416	Please define "sustainable". Is nuclear power sustainable? My dream of a cold still winter's night with no solar or wind power, energy coming from where? And all this free electricity which will power our vehicles when oil is no longer allowed, coming from where?
C425	Whilst I appreciate that roadbuilding is not a favoured option these days it does seem to me that Winchester city centre is still a through route, particularly for people who dislike using the motorway. The problem of traffic driving through the city could be substantially reduced by constructing a new northern by-pass road linking the A 33 and the Romsey Road
C428	Sustainability should be defined. Carbon neutrality is important but is not the only environmental criteria to test against.
C429	Firstly, it would help to have them numbered. Secondly, it is not clear how these relate to the 14 objectives set out in the LUC Integrated Impact Assessment, dated July 2020, which are different. A number of the objectives are written in very subjective terms against which it would be relatively easy to judge that a policy or proposal met or had not met that objective. It would be more helpful if they could be drafted in a manner which enabled more objective assessments to be made which would highlight the differences between proposed spatial options in a clearer fashion.
C437	There is a need for housing but it needs to be in places that can sustain it and it doesn't create large houses that are affordable for low income families. There are too many people who are greedy and see a piece of land as a money tree.
C439	Environmental Development should not at most basic level, involve the loss of countryside. Recycling of more types of plastic is needed. Our rivers are at increasing risk of being depleted and contaminated with nitrates. What is proposed to cope with this?  Economic The demographics of Winchester are an older and aging population. We need to develop more workspace, but also more affordable living accommodation (flats) in the city to revitalize it, bring young people and give the generation growing up here an opportunity to afford to buy in.  Social

	We need to protect and enhance open spaces, but also to provide a new, large open space (parkland) for significant adult exercise use: cycling, walking, running, skating trails – the size of South Winchester Golf Course.
C453	They're obviously very lovely, if vague until developed in detail and this is very complex strategic work to undertake! My general point is that 'development' does not mean 'growth', and I think to preserve the size and vibrancy of this wonderful city and its local area means avoiding the ruinous development which has, over decades, slowly destroyed other county towns (eg Reading) or cathedral cities (Canterbury). There's a danger of becoming an over-populated urban sprawl with huge office, industrial and housing developments all generating pointless traffic contained by massive ring roads. This thinking shows you are trying to avoid this, we need to back you and it will be a tough battle to succeed.
C455	<ol style="list-style-type: none"> <li>1. There appears to be no objective that makes the best use of brownfield sites, including change of use from commercial to housing.</li> <li>2. There should be an objective to locate developments around mass transport centres and employment opportunities.</li> <li>3. Have regard to minimising the carbon impact of new houses and roads and potential flooding.</li> </ol>
C461	<ul style="list-style-type: none"> <li>• The fundamental objective of a Local Plan is to deliver sustainable new development, which will represent only a small proportion of the majority existing building stock.</li> <li>• Attempting to make 100% of the District carbon neutral by 2030 via the Local Plan is neither feasible nor its role.</li> <li>• Carbon neutrality for the entire district by 2030 (i.e. only 7 years after the Plan is adopted) is unrealistically far ahead of the UK National objective of 2050, Whilst the ambition might be applauded, the goal lacks credence .</li> <li>• There are too many objectives, many unmeasurable, which are repetitive and could be much simplified.</li> </ul>
C462	The importance of the heritage of Winchester should be given greater recognition in all three sustainable development objectives
C464	<p>Why rush to make a carbon neutral objective for 20 years ahead of the National objective when carbon neutral objectives must be rebalanced with all other important environmental issues.</p> <p>Allow time to develop the best practice balancing all environmental objectives - including protecting green spaces, agricultural land, heritage environments - all vital parts of sustainable development.</p>
C469	The objectives are fine but woolly. It is not clear that there are adequate proposals to see them succeed.
C477	No
C479	<p>the survey claims these are sustainable development objectives. What happens to the many things that may not appear sustainable?</p> <p>They may be more practical and benefit more people.</p>

C480	<p>I broadly agree with the objectives. As regards the concept of walk-able cities/neighbourhoods, which appears to be alluded to in Question 3, it will be important to make sure that solutions that will genuinely work for Winchester are identified; inspiration can be sought in other places, but not necessarily copied.</p> <p>The plan should also reflect the reality that a single Winchester family might encompass a variety of experiences that include - at different times or simultaneously for different family members - both working within the district and commuting outside.</p>
C482	<p>There is so much emphasis on the overarching carbon neutrality objective we have forgotten what are the fundamentals of a local plan</p>
C487	<p>The Local Plan should be delivering sustainable new development, representing only a small proportion of the majority of overall building stock. It is unrealistic to aim to make 100% of the District carbon neutral by 2030 via the Local Plan, nor is it the Local Plan's role. The UK national objective is 2050 so whilst it can be considered admirable to go for such a tight time-frame (which would only be 7 years after the Plan's adoption) it is just not credible. An extensive list of sustainable social development objectives is suggested many of which cannot specifically be measured. These should therefore be simplified.</p>
C491	<p>Much of the way in which greenspaces are provided does not take into account initiatives or needs which preserve the need for wildlife and vegetation to be in small areas with restricted access. (and not just because some wealthy individual owns it). Such areas need to provide a network that wildlife can use as corridors.</p>
C493	<p>Modern planning rules create pockets of stupidly high density forcing people to live too close together. The current Covid situation suggests that the wisdom of former larger private space allocation should be reconsidered. Forcing people to live cheek by jowl can, in fact, create an anti-social effect.</p>
C494	<p>Unless there is a fundamental shift in transport (buses in particular) then you will not achieve the first objective. The constant erosion of the bus service in the outlying areas to Winchester TOWN is a self fulfilling downward spiral into total dependence on the car.</p> <p>This also has the obvious knock on to pollution.</p>
C500	No
C501	no
C511	Focus on Brown Field development and regeneration of High Streets rather than easier green field sites
C512	Keep green fields as green fields NOT build on them.

C513	The overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined.
C514	The area is not suited for cycle tracks, especially within the town. Build them around the outside but not on existing highways. There are lots of people/workers who cannot walk or cycle as part of their role I.e. carers, delivery men, tradesmen.
C515	<p>Welbeck agrees with the Council’s proposed Local Plan objectives and agrees that they reflect the key issues that are facing the District. Welbeck wholeheartedly support the principle of sustainable development, recognising that there is a balance required between facilitating growth, supporting local communities and protecting the environment.</p> <p>The proposal for Mount Edgecombe Farm supports sustainable development within Winchester District as the Vision for the development responds to the three spheres of sustainability. Development will support the Council in meeting its housing needs, whilst using undesignated land to provide a logical extension to Denmead, responding to the environmental and societal needs in the area, as well as the benefits of locating development in accessible locations.</p>
C516	<p>Include a strong statement to recognise the importance of the role that sustainable food can play in helping to achieve the overarching aim of carbon neutrality.</p> <p>Any consideration of sustainable development has to integrate food into its objectives. The NHS Healthy New Towns programme (2018) recommends 10 principles so that health and well-being can be planned and designed into new places. One of these principles is to inspire and enable healthy eating. It says that “Enabling people to eat a balanced and healthier diet, and making it easy and affordable to do so, are key to tackling health inequalities and improving environmental sustainability.”</p> <p>Food needs to be included alongside water, energy and transport in resilience and climate change adaptation planning</p> <p>In addition, the role of food is critical in helping to achieve an overarching aim of carbon neutrality. In the UK over 30% of greenhouse gas emissions come from the food system (Food climate research network) Food is one of the largest contributors of greenhouse gas emissions from human activities, second only to transportation.</p>
C523	I believe the paper I submitted answers this question

C526	The Trust welcomes reference to protecting and enhancing community facilities; this would include arts and cultural venues such as theatres. We recommend the plan includes policy which protects venues from unnecessary loss in line with paragraph 92 of the NPPF (2019).
C529	they should: constrain visitors and tourism, no greenfield site development, encourage residents to enjoy "healthy" activities and discourage "unhealthy" ones.
C532	Mention of the UN Sustainability Goals would be helpful
C535	<p>Winchester Food Partnership's comments are:-</p> <ol style="list-style-type: none"> <li>1. Include a strong statement to recognise the importance of the role that sustainable food can play in helping to achieve the overarching aim of carbon neutrality.</li> <li>2. Any consideration of sustainable development has to integrate food into its objectives. The NHS Healthy New Towns programme (2018) recommends 10 principles so that health and well-being can be planned and designed into new places. One of these principles is to inspire and enable healthy eating. It says that “Enabling people to eat a balanced and healthier diet, and making it easy and affordable to do so, are key to tackling health inequalities and improving environmental sustainability.”</li> <li>3. Food needs to be included alongside water, energy and transport in resilience and climate change adaptation planning</li> <li>4. In addition, the role of food is critical in helping to achieve an overarching aim of carbon neutrality. In the UK over 30% of greenhouse gas emissions come from the food system (Food climate research network) Food is one of the largest contributors of greenhouse gas emissions from human activities, second only to transportation. A study in Nature Food March 2021 Food systems are responsible for a third of global anthropogenic GHG emissions   Nature Food found that a third of global GHG emissions comes from the food system. Food goes through a number of steps – it is farmed, harvested, or caught, transport, processed, packaged, distributed and cooked, and the residuals disposed of. All of these steps cause emissions of anthropogenic greenhouse gases and requires energy.</li> </ol>
C542	There is no mention above of waste. Reducing waste should be a key priority for the council in 2 ways: (i) reduction of council-generated waste, in both physical terms and energy terms (for example heat loss surveys should be carried out on council properties including any social housing owned or operated by the council to ensure

	<p>heat waste is minimised)  (ii) encouraging reductions in waste in the community both in homes and businesses.  Efficient use of resources should be at the heart of any sustainability policy.</p> <p>Tensions could arise between some of the objectives for example encouraging renewable generation can be in conflict with biodiversity and green-spaces objectives. There should be a firm policy of promoting renewable generation on brownfield sites or brownfield-adjacent sites, rather than greenfield areas. Where possible, infrastructure should be co-located, and where new infrastructure is installed, this should as far as possible be co-ordinated to minimise environmental and social disruption, for example upgrading electricity cabling to facilitate EV charging could be done alongside the installation of fibre broadband.</p> <p>Vulnerability should be central to any civic strategic plan. All too often, policymakers have a vision of consumers and consumer participation that ignores the real challenges faced by many.</p> <ul style="list-style-type: none"> <li>- 7% of British adults have never used the internet</li> <li>- 21% of adults have a disability</li> <li>- 16% of adults have poor or very poor levels of literacy</li> <li>- 14% of household in Britain are in fuel poverty</li> <li>- 50% of households have never switched energy supplier despite knowing they can.</li> </ul> <p>For every element of the Local Plan, questions should be asked in terms of whether vulnerable residents will be able to fully participate, or whether they will be further disadvantaged. This means that time and money need to be allocated to support vulnerable households to ensure that they understand and are able to navigate the changes as they arise - simply publishing information online and expecting people to act is utterly insufficient and arguably discriminatory. This consultation for example has been poorly advertised and I only discovered it by chance, the day before it closed, and I pay council tax to Winchester Council.</p>
C543	<p>Whilst making new developments sustainable the existing housing stock also requires upgrading. Schemes such as the HCC Solar Panel scheme need to be included. Should the City Council intend to tender for say domestic heat pumps or insulations systems would it not make sense to offer such schemes to owner/occupier homes as increasing the number of units required could lead to a reduction in price but would also reduce the energy dependency of the total housing stock.</p>

C548	<p>I feel strongly that what is required is the provision of many more social/council houses and less 4/5 bedroom houses.</p> <p>The importance of the historic environment and conservation areas should be included in the three objectives.</p>
C554	<p>Transport is rapidly changing and you appear to be basing your objectives on 'short term' carbon gain rather than 'long term' vision.</p>
C557	<p>I believe that the sustainable development objectives are best achieved by enhancing the performance of the market towns and villages by supporting localised economies.</p>
C559	<p>The plan should probably be specific, in a development objective, about the amount of housing the plan will provide. This is then an input to the 'planning balance' across all of the objectives.</p>
C561	<p>What about sustaining the character of the district?</p> <p>All the objectives are fine in isolation - but we should be ensuring that individuals already living in the district have their lives enhanced and not compromised by the greed of landowners and developers.</p>
C563	<p>Leisure amenities need to be built in conjunction with a balanced approach to new housing, roads and retention of green spaces</p>
C567	<p>Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined. The objectives of the Local Plan should be SMART.</p>
C568	<p>Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined. The objectives of the Local Plan should be SMART.</p>
C569	<p>Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined. The objectives of the Local Plan should be SMART.</p>
C574	<p>Make use of what is unique to Winchester - the heritage, the archeology, the attractive buildings and encourage tourism. It may be with Covid and future pandemics, not to mention the need to reduce CO2, people will be traveling abroad less - make Winchester a destination for tourism, both from overseas and from UK.</p>
C583	<p>Development at Mill Mead in the curtilage of the Mill House Bishops Waltham would provide outstanding use of available space for dwellings and provide an area for biodiversity to ensure a biodiversity net gain</p> <p>Further information may be found at</p>

	<a href="https://www.manula.com/manuals/mediter-developments/mill-mead-planning-application/">https://www.manula.com/manuals/mediter-developments/mill-mead-planning-application/</a>
C584	Sustainable development need more thought and imagination than has been shown so far.
C587	The comment has been removed as the respondent requested their response not to be published
C596	In light of the fact that the local plan was created a while ago, and long before the recent changes in population behaviour enforced by the pandemic, the WCC should reconsider the design of any new developments such as size of individual dwellings (need for home office space); outdoor spaces for recreation and leisure, both private gardens and public spaces; the need for large park and ride facilities since the reduced demand for commuting to large conurbations and demise of the high street as a shopping destination.
C597	<p>Please see representations made to Planning Policy, submitted in PDF form.</p> <p>The second social objective sets out to 'provide and broaden the choice of homes to meet the identified needs of our communities and to support long term economic growth'. In this respect the plan should be more explicit in stating that it will need to boost housing supply and provide land to meet as a minimum it's identified housing requirement over the plan period. Furthermore, housing affordability is acknowledged as a key issue for the Local Plan and this should also be more explicitly acknowledged in the social objectives.</p>
C600	Inclusivity for all, remove the 'Not in my back yard' influences of some Parishes
C602	<p>We need to invest in more community centres/village halls in order to reduce our car journeys. As a mother of four, I have expended hundreds of hours in the car, transporting children to kumon classes, art lessons, tap dancing, street dance, ballet, jazz, modern, pre-prof dance, flute, trumpet, beavers, cubs, beavers, scouts and skate parks, and hockey clubs.</p> <p>When I wasn't doing this I spent further hours in the car going to pilates.</p> <p>Community centres have a very small number of hours available, so increasing the number of settings or rooms for hire would make a significant difference.</p>

### 34 Email responses relating to Sustainable Development Objectives

Respondent ID number	Email comment
E343	<p>Regarding the Local Plan, our comments are as follows:</p> <p>3. PAGE 12. The UK Government has promised carbon neutrality by 2050. Why does Winchester have to do it by 2030? To do so at such a pace will inevitably increase the cost of living for every person in the district.</p>
C283	<p>As a Winchester district resident (Micheldever) I would like to offer the following comments on the proposed local plan.</p> <p>Firstly I am pleased to read of the prioritisation of environmental issues, surely the most pressing issue in the short to medium term.</p> <p>I would be keen to see significant improvements in public transport, particularly services to rural communities where car transport is really the only viable option for many at the moment.</p> <p>Improved cycle ways would also be highly welcome.</p> <p>The current experience of the COVID pandemic has emphasised the importance to our health and well-being of green spaces and I would argue that every attempt to maintain current green areas is essential.</p> <p>To this ends, new housing developments should I feel be focussed on brown field and in-fill, rather than large scale new green site development which, because of the need for new infrastructure construction (assuming, that is, that appropriate facilities are factored into their design- something that often is sadly lacking in the finished product), are unlikely to be environmentally sound and likely to be an overall encouragement to personal car use rather than public transport and generally reduce the quality of life for those in the area.</p> <p>I feel that, arguably, once the effects of COVID become clearer there is going to need to be a revitalisation of existing urban areas, re-engineering city centres and high streets rather than constructing increased urban sprawl.</p>
C523	Document attached to email
E586	<a href="#">Sustainable Development Objectives</a>

	<p>2.14 Following this, the Sustainable Development Objectives are presented, and the Council asks; <i>do agree that the objective reflects the key issues that are facing the district?</i> Ridge and Partners LLP broadly support the principles that underpin the Council's sustainability objectives. However, we would like to see greater emphasis placed on providing housing for older persons and local living. Planning for the elderly is clearly a key issues that the District is expected to face when considering the noticeable increase people ages 65 and over, during the plan period.</p> <p>2.15 In June 2019, new PPG on housing for older and disabled people was published which provides guidance for authorities preparing policies on housing for this specific group. This PPG provides an overview of the evidence which can be utilised in assessing older person's needs; the different types of specialist housing available and the requirements for accessible housing – this should also be taken into account in assessing the needs of specific groups.</p> <p>2.16 The need to provide housing for older people is critical. People are living longer lives and the proportion of older people in the population is increasing. In mid-2016 there were 1.6 million people aged 85 and over; by mid-2041 this is projected to double to 3.2 million. Offering older people, a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.</p> <p>2.17 Within planning, there is no fixed or agreed definition of what constitutes different types of housing for older people. The only subtlety lies in whether a development sits within Use Class C3 (Residential) or C2 (Residential Intuitions). Appeal decisions show how Inspectors have wrestled with the issue. For example, in one appeal<sup>1</sup> for retirement apartments for over 55s, the Inspector considered the use class to be C3 because they were wholly self-contained and noted that, whilst they were serviced, this is different from care.</p> <p>2.18 In a separate case<sup>2</sup>, the Inspector considered that assisted living units were C2 because, whilst they were self-contained, they were accessed via communal spaces and residents had access to communal facilities. Occupants had to be over 60 and receive a minimum of two hours care per week, albeit the definition of care was very broad.</p> <p>2.19 The importance of being able to determine the use categorisation of the accommodation has financial implications in regard to policy requirements and obligations such as CIL charges and affordable housing requirements. C3 uses typically have to make contributions whilst C2 do not. C3 accommodation is also counted</p>
--	--

	<p>towards an LPA's housing supply whereas C2 is not. This can have a significant impact on an LPA's ability to demonstrate a five-year supply of housing, as per Paragraph 47 of the NPPF.</p> <p>2.20 In order to mobilise the market and encourage the delivery of specialist housing for older people, South Oxfordshire District Council ("SODC") consider that extra care development incorporates independent living and is the same use as residential (C3). They seek 40% affordable housing on residential development (Policy CSH3). However, such development also includes communal areas which increase build costs and generally they have a longer selling period making retirement housing less viable than new homes in general. They conclude that extra care housing is unlikely to be able to absorb CIL contributions alongside 40% affordable housing. Therefore, CIL is considered not viable for extra care development incorporating affordable housing. It is our view that a similar approach to that adopted within SODC should be adopted.</p> <p>2.21 In addition to this, SODC permit residential development on sites that are not allocated where: ii) it is for specialist housing for older people in locations with good access to public transport and local facilities. It is our view that this approach should be adopted if the council continues its approach and does not allocate housing for older people.</p> <p>2.22 It is noted that Winchester's older person population (above 65+) accounts for 21.1% of the total population of the District, this is above the average for England which is 18.2%. Winchester is projected to see a notable increase in the older person population with the total number of people aged 65+ and projected to increase by nearly 50% (48.7%) over the 20-years to 2036. This compares with overall population growth of 21% and a more modest increase in the Under 65 population (increasing by 13%). Whilst the previous plan does not allocate specific sites for older persons, it our view that the council should be more supportive and proactive by allocating individual sites to meet the needs of older people.</p> <p>2.23 Winchester's ageing population presents a specific issue for the District and diversifying the range of open market accommodation suitable for older people will be important. The provision of smaller open market dwellings, a greater supply of bungalows and new retirement apartment schemes will assist in addressing the requirements for older people. It is Ridge and Partners LLP view that it is vitally important that older members of the community are able make choices as to how best to meet their housing requirements as personal circumstances change over time. The emerging Plan should therefore support in principle, the provision of a range of accommodation by specialist private sector developers which will be specifically designed to support the needs of an ageing population.</p>
--	---

	<p>2.24 The provision of such accommodation would not only provide increased choice for older residents but may also, in turn, release family housing as elderly residents are provided with a greater choice of purpose-built accommodation which may better meet their requirements.</p> <p>2.25 For the reasons set out above, it is therefore our view that the ‘sustainability objective’ does not address all the key issues that face the council by not considering the noticeable increase in the older person population. Emphasis should be placed within the council’s overarching objective responding to this issue.</p> <p>2.26 Furthermore, because of the reasons set out within this section, we believe that there is enough justification to inform supportive policy and land allocations within the emerging Local Plan. This recommendation is also supported by Icen’s SHMA assessment who state, “<i>To support the delivery of specialist accommodation, it may be appropriate for the Council to consider making specific land allocations for specialist housing for older persons within the new Local Plan</i>”.</p>
C342	<p>3: Do you agree with the Sustainable Development Objectives that have been set out in the Strategic Issues and Priorities consultation document? For each of the objectives, do you:</p> <ul style="list-style-type: none"> <li>• agree with the objective?</li> <li>• agree that the objective reflects the key issues that are facing the district?</li> <li>• agree that the objective supports the fundamental aim of Local Plan to achieve carbon neutrality?</li> </ul> <p><b>Environment            Yes    Yes – but more emphasis on retaining/increasing green space            Yes</b>  <b>Economic                Yes    Yes    Yes - but more emphasis on carbon neutral and low impact</b>  <b>Social                      Yes    Yes – with emphasis on provision of type of housing required, eg. affordable, older people            Yes</b></p> <p>4: Do you have any other comments about the Sustainable Development Objectives?  <b>Needs to be more emphasis on the new climate change and biodiversity policies</b></p>
E739	<p><b>Sustainable Development</b>  <b>Sustainable Development Objectives – Consultation Question</b>  <b>Environmental Objectives</b></p> <p>3.1 The inclusion of a section focussed on environmental objectives for Winchester is welcomed, in light of the ongoing climate emergency that was declared by the City Council in June 2019, and the commitment of the Council to becoming carbon neutral by 2024. 3.2 In addition to these commitments, it is also recognised that the PfSH - in tandem with partners - is working to achieve nutrient neutrality from housing development across the sub-region, which on the basis of advice from Natural England is to develop a PfSH-wide strategic approach</p>

to mitigation. As such, it is incumbent upon the Local Plan to acknowledge this, and establish that the Local Plan is required to detail policy and objectives which seek to achieve the aim of ensuring that new housing development enables a nutrient and nitrate neutral future.

### Zero Carbon

3.3 A report published by WinACC (2019)<sup>1</sup> which considers greenhouse gas emissions identified that Winchester's carbon footprint per person is higher than 143 of the 188 other districts in England, which indicates that Winchester is worse than the national average in respect emissions, with more comparatively to do in respect of working towards carbon neutrality. As such it is agreed that a set of environmental objectives are required to help accelerate a change in attitudes and guide development into helping achieve this aim.

3.4 The Council's 'Carbon Neutrality Action Plan 2020-2030' (December 2019)<sup>2</sup> sets out that transport (287,000 tonnes CO<sub>2</sub>e, excluding Motorway emissions) is the largest contributor to emissions in the District, outstripping emissions from domestic energy, commercial energy and other sources. This has been further evidenced to be the case in more recent data too, with car road transport a key contributor to the carbon footprint of the District.<sup>3</sup> This indicates the need for the Local Plan to seek to implement a spatial strategy that can accelerate a modal shift away from commuting via private transport towards walking, cycling and public transport. This is reflected in the Environmental Objectives of the plan. Given the extensive carbon creation from on-site electricity and gas consumption, the need to promote development that is energy efficient and appropriate to the local surroundings is also supported.

3.5 **However**, the Local Plan needs to follow these principles through into the way - and spatial choices - that growth is distributed and should also be cognisant of how measures are implemented via new policies; particularly with some of these objectives to be captured at the national level via proposed changes to Building Regulations, which would see new homes in the short term build to zero carbon ready standards, but then only operating at zero carbon once decarbonisation of the energy grid itself had occurred.

3.6 One of the difficulties that can be faced when trying to achieve challenging environmental objectives is that reverse-engineering improvements into existing areas of housing and existing communities presents significant challenges, and often piecemeal and windfall development is not of a scale and nature to properly facilitate that change. Whilst simple things such as improving insulation in existing and new buildings can achieve large initial gains (and should be pursued), it becomes more difficult to get to 'zero carbon' via such an approach to existing communities and urban areas. This is because there is a need to induce behaviour change and implement new 'big ticket' approaches such as (for example – and among others) district heating systems, reducing reliance on a

carbonised energy grid by using land for renewable energy generation, or segregated bus rapid transit systems. Implementing such holistic measures via a spatial strategy which might see lots of fractured and dispersed development across the District becomes more challenging; it does not have the critical mass or co-ordinated land availability to deliver change. However, the introduction of a new settlement as part of a varied spatial strategy provides a blank canvas onto which Winchester can project its environmental ideals, enabling Winchester to ensure development occurs in such a way that these objectives could be met from the outset, with low and zero carbon outcomes embedded from the start.

3.7 The delivery of a new garden town at Micheldever Station would enable a zero-carbon development that would be achieved through the adoption of a range of available measures. Homes and buildings will be designed to be highly energy efficient and with low utilities demand, using measures such as high levels of insulation, efficient glazing and materials, use of heat pumps for heating new homes without use of gas, managing water use and providing solar renewable energy generation. At the community level, a focus on embedding low carbon transport options; local employment and local facilities reducing the need to travel, all new local walking and cycling opportunities, also feeding a bus network and the train station for transport further afield. This will contribute to significantly reducing the carbon footprint of the place; and on a like-for-like basis (i.e. on per unit of development measurement) do so much more effectively than alternative spatial growth options.

**Nitrates**

3.8 In respect of nitrates, we support the development of local solutions to ensure that the growth of Winchester is nutrient neutral, creating no greater net impact on the protected and sensitive habitats within the Solent.

3.9 In this regard, a proposed development at Micheldever Station:

- 1 Is largely currently in use as agricultural arable land, an activity which generally results in intensive levels of nitrate use through fertiliser. Through development this would change to lower nitrogen-generating uses such as green space, residential gardens and land used for infrastructure. This will partly offset the impact of new development, reducing the net effects from the use of the land. The Sutton Scotney Estate is a large rural estate of greenfield land, uniquely providing the Micheldever Station proposals with sufficient land and opportunities to further reduce nitrogen generation from existing uses on-site and intrinsically tied into growth; and
- 2 Be able to implement further bespoke solutions, including:

a through a potential new local waste water treatment centre (installed to deal with the effluent from the development) which can be designed and built to specifications which ensure efficient nitrogen filtering through new technology; and

b development of extensive areas of traditional reedbed wetlands as part of a Sustainable Drainage System (SuDS) for the new settlement (also receiving any outflow from the above facility). The large areas of green space proposed as part of the planned community uniquely mean such wetland areas can be planned in from the outset, providing benefits for drainage, wildlife, recreation and nitrate reduction. Combined, this will ensure that nitrates are stripped from any outflowing water before being released back into the local ecosystem and travelling downstream.

3.10 These measures could also potentially provide a nitrogen 'sink' for offsetting impacts from elsewhere in the District where neutrality cannot as easily be achieved (e.g. through intensification in existing urban areas).

**Economic Objectives**

3.11 The economic objectives are generally supported, particularly those which support the ability for local residents to live, work and spend locally and that new development is served by appropriate infrastructure. This objective is clearly interrelated to the environmental objectives, and the overarching need to achieve a modal shift in commuting and an encouragement in walking and cycling and the use of public transport.

3.12 We would also support the commitment to ensuring that development which actively encourages and supports the needs of new businesses particularly within the creative sectors such as IT and green growth sectors. Winchester benefits from being within the Enterprise M3 region which, as identified within the Enterprise M3 Strategic Economic Plan (2014), is host to a highly skilled workforce, and is host to four of the top ten technology clusters in the country. As such, Winchester should attempt to attract more inward investment from this area and aim to provide attractive locations that these companies would want to locate to.

3.13 The delivery of a new garden town can help to achieve these objectives by siting new forms of high-quality and attractive employment space within a short distance of residential areas which are suitably connected via cycle and walkways. Locations such as Micheldever Station are particularly strong in that the existing rail station can be utilised to ensure that public transport strategy is at the heart of any employment development, and its potential can be maximized through additional development and investment. As part of our proposals, in addition to discussions that have taken place around increasing capacity of rail movements, new bus links are proposed which would help to link Micheldever to surrounding settlements, with initial support identified for this approach from Stagecoach (as a local bus operator we have consulted with).

3.14 There is also potential – should the Council so wish – for the site to provide a location for some new logistics space, recognising that the NPPF requires local plans to make proper provision for such uses and also that the

	<p>PfSH has recently identified a local need for 168ha of warehousing and 5 new sites for large logistics warehousing and an overall aspiration/need for office development In the region. The City Council should be engaging with the PfSH process to explore the potential role for sites identified in its SHELAA (both at Micheldever Station and elsewhere) to accommodate those needs alongside housing.</p> <p><b>Social Objectives</b></p> <p>3.15 The social objectives set out are supported, and we agree with the importance placed on ensuring that a transport system is achieved that is balanced and provides a range of options and a choice for local residents. A key aspect of this is that sustainable forms of transport are emphasised. However it is felt that in order to satisfactorily address these issues within new development, particularly those around developing a built environment that is focussed more on people than private cars and responds to the local character, this needs to be a key factor at the outset of new housing developments.</p> <p>3.16 Providing an integrated and joined up transport network provides a number of challenges. Important to delivering effective accessibility is the ability to invest and develop those local transport services, ensuring that they are fit for all potential residents. Works such as integrating active modes of travel and public transport (e.g. cycle to train, with cycle parking at bus stops and train stations), enabling step free access and improving service frequency, are all important issues which have to be considered. This will ensure that any new residents are genuinely attracted to using public transport rather than continuing to use a private car, which in turn will achieve a modal shift from private to public transport and reduce carbon emissions.</p> <p>3.17 Consequently, a carefully considered and planned transport strategy is imperative in ensuring that local residents have a functioning and usable public transport network. At Micheldever Station, consideration has already been given to how bus services would operate along routes to key destinations serving both employment areas and connecting other large settlements. Interchange facilities are highly important, and the need to ensure that these forms of connections are in place at the start of developments so that residents become used to using them and they are not introduced later on in the scheme.</p> <p>3.18 We therefore consider that forms of new development that can respond to these objectives such as garden towns should be prioritised, as they will allow the Council to ensure that the necessary social, environmental and economic objectives are at the forefront of the development and are considered key characteristics.</p>
E932	<p>I strongly disapprove of this development as it does not sufficiently take into account the environmental impact of the area.</p>

	<p>The manufacturing of concrete and steel contributes to a large part of the worlds carbon emissions.</p> <p>"Another way to cut emissions is by encouraging design that uses less steel and cement altogether – and uses them more strategically combined with other materials, like wood and sustainable plastics. Updated building and infrastructure codes or regulations that put a price on carbon would encourage builders to try out alternatives." Chris Bataille an energy economist</p> <p>Please keep pushing for environmentally sustainable housing, not these dated oversized developments.</p>
E937	<p>This is the response from Wickham Society, a civic society within the community.</p> <p>We have reviewed the consultation documents and questionnaire and do not feel it is appropriate for the Society as an organisation to respond directly to most questions as many of them are relatively subjective. We have therefore forwarded the details and web links to our members and have encouraged them to respond individually with their views.</p> <p>However, Wickham Society believes that the following points should be included as part of the next stage of discussion on the future of the district:</p> <ul style="list-style-type: none"> <li>* We agree with the overarching vision and aspirations of this revised local plan. The impact of climate change, long forewarned, is now with us and the Society believes that we all have a responsibility to learn from past mistakes and so the Council should include climate change implications in every strategic decision to achieve the aim of carbon neutrality by 2030.</li> <li>* The pandemic has confirmed that access to outside space is a vital part of supporting people’s well-being. Every opportunity to protect existing countryside and green spaces and to retain existing settlement boundaries must be a priority.</li> <li>* Communities such as Wickham value their distinct identities. With a huge (6000 homes) development immediately adjacent to the southern boundary of Wickham, it is crucial that the small separation provided by the existing farmland is maintained – thus creating a vital green belt between Wickham and Welborne. Housing development in this settlement gap should be expressly forbidden as it is in the 2014 Winchester District Plan.</li> </ul>

	<ul style="list-style-type: none"><li>* Any additional housing should be developed first on brownfield sites or within existing buildings, be respectful of the local character and ideally be where there are established public transport hubs and employment. We believe the opportunities for the development of such locations for homes has increased with the rapid decline of high streets and should be taken to retain life in the centres of Winchester and surrounding market towns.</li><li>* Wickham is located on the southern boundary of the district. It suffers the environmental impact of its position at the crossroads of two A roads and a number of B roads. Levels of traffic and congestion have increased substantially due to housing developments to the east in Denmead, Havant and Waterlooville, to the south from Whitely, Fareham and Gosport and to the west from Waltham Chase, Bishops Waltham and Hedge End and beyond. This will be greatly exacerbated by the creation of 6000 homes in Welborne, less than a mile south of Wickham, which is due to start in the next two years. Wickham urgently needs a review of traffic bottlenecks and pedestrian danger spots with action to mitigate these problems before any kind of further development is even considered to take place in this locality.</li><li>* Following the pandemic, there also needs to be further review of the minimum size and facilities within an individual dwelling, for example, sufficient living rooms for families to work from home or support home schooling. Assuming a continued reluctance to use public transport, adequate parking with secure access to a recharging electricity supply will need to be reconsidered in new developments in areas outside the city as bus routes in rural areas become increasingly unviable. An example of how existing parking allowances are inadequate is well known in this parish in Knowle Village – designed and built as a purpose-built community in the early 2000’s. Residents have to rely on cars to access every service and employment; the streets are clogged overnight and at weekends, compromising the ability of emergency services to access some parts of the village.</li><li>* The Society believes that the planning system must work for people and the environment and that developers’ needs are secondary. The countryside is part of the solution to carbon neutrality and for any new development there must be clear evidence of housing need in that location, with the necessary infrastructure to support it. The apportionment of a specified number of houses as a fraction of a government-dictated requirement for the district is not an appropriate way of determining the housing needs for a village like Wickham.</li><li>* There must be an audit trail to show the way in which each new development is going to offset its carbon</li></ul>
--	--

	<p>footprint – both for embedded carbon incurred during build and the ongoing usage.</p> <p>The countryside is part of the solution to the climate emergency and every effort must be made to protect it.</p> <p>You have asked for ideas of indicators to help monitor the district plan objectives. We put forward the following suggestions:</p> <ul style="list-style-type: none"> <li>* Snapshots of the percentage of children who walk to school</li> <li>* Pollution levels</li> <li>* Levels of fly tipping and recycling</li> </ul>
E1005	<p><b>Do you agree with the Sustainable Development Objectives that have been set out in the plan?</b> 3.1 Bloor Homes supports the objective that seeks to, <i>“provide and broaden the choice of homes to meet the identified need of our communities and to support long term economic growth”</i>, as this objective is in line with the objectives for the planning system set out in the NPPF (paragraph 8). However, there is concern that the overall quantum of housing growth may not have taken into account an unmet need from neighbouring districts. Equally, whilst the standard methodology provides a figure for the requirement, this should very much be seen as a minimum, the District should be looking to over provide by 10% to guarantee delivery of the required number of homes over the plan period. 3.2 Bloor Homes supports and is encouraged by the recognition in that plan that there is a need to, <i>“support long term sustainable employment opportunities in the market towns and rural communities”</i>. However, to do so, the plan needs to ensure the right level of provision of new homes for each market town / village. Without sufficient homes, younger generations will not be able to find somewhere to live and there will not be the support for the rural economy that is required. It is vital that market towns and villages can grow to ensure longer term support for shops, services and facilities. 3.3 It is imperative that the plan delivers the right number of homes in the right places. For instance, Wickham is a sustainable settlement with a good range of local and high street shops, including a local supermarket, pubs and restaurants. The Settlement Hierarchy Review (2021) identifies Wickham as one of the highest performing market towns and villages in the district. As such, it is well placed to accommodate additional growth over the plan period to support the high street. Bloor Homes’ site at Mill Lane, to</p>

the north of the town, is within walking distance of a range of key services and facilities (see appendix 2, Services and Facilities plan), including the market square and primary school and can deliver a genuinely sustainable extension to the town. **If the local plan includes a strategic policy on climate change what are the key issues that this policy should cover? Are the possible Local Policy approaches ambitious enough and how would you rank them in order of priority?** 3.4 The possible local plan approaches put forward in the consultation with regard to climate change are ambitious. They require careful consideration and need to be supported by clear evidence if they are to be adopted into policy. We have highlighted a few concerns with some of the suggested approaches below. 3.5 The policy approach needs to strike the right balance in terms of ambitions versus affordability and feasibility. For new homes, the Government will set national standards through building regulations for energy efficiency but has acknowledged that local authorities can look to set local energy efficiency standards for new homes for now. However, those standards need to be clearly justified and backed up by evidence in terms of feasibility and viability if the plan is to be considered deliverable and sound. Terence O'Rourke Ltd 2021 5 3.6 A lifecycle carbon assessment for a development / design of new homes is onerous, particularly at the early stages in the planning application process. This process will add unnecessary time and cost to the process and should be excluded. As well as considering the viability of such an approach, the local plan needs to consider the implications for the decision-making process and the potential time delays by adding an additional hurdle for developments to pass through. Given the fact that years pass between the submission of planning applications and commencement of development on site pursuant to permissions being granted, information about specific products and materials to be used during developments is often not known until the latter stages of a development and can often be subject to last minute changes due to product unavailability, changes in cost and other supply chain issues. This requirement would need to be carefully tested and considered to ensure it is not so inflexible that it prevents new homes being built in a timely manner. Indeed, Winchester City Council need to be confident that their development management team can manage the extra requirements a policy requiring a carbon lifecycle assessment would place on the teams' resources and what expertise would be required to properly assess the information that is submitted. 3.7 The provision of rainwater gardens next to roads and footways is an admirable aspiration. However, there are significant spatial implications of such proposals and these would need to be considered alongside the views of Hampshire County Council as highways authority as well as the potential implications for viability, long-term future maintenance and design considerations. 3.8 As acknowledged by the plan, introducing local water consumption rates lower than 100 litres per person per day would require clear evidence to demonstrate that this is achievable and viable. 3.9 Requiring large developments to provide open space for people to grow their own food is also admirable, but again, consideration needs to be given to how such space would be managed and

	<p>maintained, unless as a traditional allotment, and the impacts that such areas would have for developers who are already struggling to meet stringent nitrogen neutrality requirements. Clearly, increasing green infrastructure requirements could have a detrimental impact on the quantum of homes a site can deliver and lead to the inefficient use of sustainably located sites. It may be more appropriate in some locations but not so in others. There would equally need to be demand from new residents for such facilities which simply won't be known at the plan-making or planning application stages of the development process. 3.10 With each of these aspirations, if they are taken forward to the policy stage, there needs to be very clear evidence that the proposal is feasible, achievable and viable, not just on paper but in practice too, to ensure the plan can be found to be effective and sound in accordance with the requirements of the NPPF. <i>Carbon offsetting fund - Should it be used as a last resort and if it is established how should money be used?</i> 3.11 Any carbon offsetting requirement would need to ensure it was compliant with the appropriate Regulation 122(2) of the Community Infrastructure Levy Regulations 2010 and meet the relevant tests. There would need to be clear accountability as to how the funds are spent and how they are linked to the development.</p>
<p>E1069</p>	<p><b>Sustainable Development Objectives</b>  <b>Do you agree with the Sustainable Development Objectives that have been set out in the plan?</b></p> <p>3.1 Anchor Properties supports the objective that seeks to, <i>“provide and broaden the choice of homes to meet the identified need of our communities and to support long term economic growth”</i>, as this objective is in line with the objectives for the planning system set out in the NPPF (paragraph 8).</p> <p>3.2 Anchor Properties supports and is encouraged by the recognition in that plan that there is a need to, <i>“support long term sustainable employment opportunities in the market towns and rural communities”</i>. However, to do so, the plan needs to ensure the right level of provision of new homes for each market town / village. The provision of specialist older persons living accommodation will free up homes within the village for the younger generations and provide additional employment opportunities, helping to support market town and rural communities economies.</p> <p>3.3 It is imperative that the plan delivers the right number of homes in the right places. For instance, Kings Worthy is a sustainable settlement that benefits from local convenience stores, including a chemist, community facilities, including community hall, two pubs, a range of employment opportunities and a primary school. The Settlement Hierarchy Review (2021) identifies Kings Worthy in the top tier of market towns and villages in the district. As such, it is well placed to accommodate additional growth over the plan period to support the community facilities and employment opportunities the village has to offer.</p>

3.4 Anchor Properties land interest is adjacent to the Cart and Horses pub, to the south of the village. It is within walking distance of the church and community hall and benefits from proximity to the Cart and Horses pub. Anchor Properties is promoting the site for a care village comprising a care home and assisted living units, and therefore future residents will benefit from the proximity of the site to key community facilities.

3.5 Kings Worthy also benefits from regular bus services to and from Winchester, with short journey times and buses stopping at St. Mary's Church. The village is accessible for employees travelling to the settlement for work but also for residents travelling to Winchester for services and facilities.

3.6 All of these services and facilities make it a sustainable settlement and is why Kings Worthy scores highly in the settlement hierarchy assessment.

**If the local plan includes a strategic policy on climate change what are the key issues that this policy should cover?**

*Are the possible Local Policy approaches ambitious enough and how would you rank them in order of priority?*

3.7 The possible local plan approaches put forward in the consultation with regard to climate change are ambitious. They require careful consideration and to be supported by clear evidence if they are to be adopted into policy. We have highlighted a few concerns with some of the suggested approaches below.

3.8 The policy approach needs to strike the right balance in terms of ambitions versus affordability and feasibility. For new homes, the Government will set national standards through building regulations for energy efficiency but has acknowledged that local authorities can look to set local energy efficiency standards for new homes for now. But those standards will need to be clearly justified and backed up by evidence in terms of feasibility and viability if the plan is to be considered deliverable and sound.

3.9 A lifecycle carbon assessment for a development / design of new homes could be challenging for developers to deliver, particularly at early stages in the planning application process. So, as well as considering the viability of such an approach, the local plan needs to consider the implications for the decision making process and the potential time delays by adding an additional hurdle for developments to pass through. Given the fact that years pass between the submission of planning applications and commencement of development on site pursuant to permissions being granted, information about specific products and materials to be used during developments is often not known until very late in the day and can often be subject to last minute changes due to product unavailability, changes in cost and other supply chain issues. This requirement would need to be carefully tested and considered to ensure it is not so inflexible that it prevents new homes being built in a timely manner.

3.10 The provision of rainwater gardens next to roads and footways is an admirable aspiration. However, there are significant spatial implications of such proposals and these would need to be considered alongside the views of

	<p>Hampshire County Council as highways authority and the potential implications for viability and long-term future maintenance.</p> <p>3.11 As acknowledged by the plan, introducing local water consumption rates lower than 100 litres per person per day would require clear evidence to demonstrate that this is achievable and viable across all types of housing, including care homes and villages.</p> <p>3.12 Requiring large developments to provide open space for people to grow their own food is also admirable, but again, consideration needs to be given to how such space would be managed and maintained, unless as a traditional allotment, and the impacts that such areas would have for developers who are already struggling to meet stringent nitrogen neutrality requirements. It may be more appropriate in some locations but not so in others. Equally, it may be appropriate for family housing but not for specialist accommodation for older people.</p> <p>3.13 With each of these aspirations, if they are taken forward to the policy stage, there needs to be very clear evidence that the proposal is feasible, achievable and viable, not just on paper but in practice too, to ensure the plan can be found to be effective and sound in accordance with the requirements of the NPPF.</p> <p><i>Carbon offsetting fund - Should it be used as a last resort and if it is established how should money be used?</i></p> <p>3.14 Any carbon offsetting requirement would need to ensure it was compliant with the appropriate Regulation 122(2) of the Community Infrastructure Levy Regulations 2010 (as amended) and meet the relevant tests. There would need to be clear accountability as to how the funds are spent and how they are linked to the development.</p>
E1070	<p>The Defence Infrastructure Organisation (DIO) is broadly supportive of the Sustainable Development Objectives within the SIP document. The DIO acknowledges the aspiration for ‘carbon neutrality’ to be promoted within Winchester through new development. We recommend that associated policies within the emerging Local Plan be worded flexibly to help ensure high-quality and bespoke approaches towards energy and sustainability within new development. We acknowledge that in-built technologies and building practices are continually evolving and emerging Local Plan policies should seek to accommodate the emerging pace of change.</p>

<p>E1082</p>	<p><b>Sustainable Development Objectives</b>  <b>Do you agree with the Sustainable Development Objectives?</b>  Wates broadly agrees with the Sustainable Development Objectives set out in the consultation document. It is considered that ‘Social Objectives’ should be updated to reflect the need to broaden the choice of homes to meet the full objectively assessed housing need for all communities across the District and to support long term economic growth. The ‘Social Objectives’ should also reflect the need to improve the availability of affordable housing and to improve housing affordability.  ‘Economic Objectives’ should be updated to recognise the need for new housing across the District to support local services and facilities.  <b>Do you have any other comments about the Sustainable Development Objectives? If the Local Plan includes a Strategic Policy on Climate Change what are the key issues that this policy should cover? Are the possible Local Policy approaches ambitious enough and how would you rank them in order of priority? What else can the Local Plan do to assist with moving the district towards zero carbon?</b>  Wates has no further comments to make at this time.</p> <p><b>Do you agree or disagree with the following statement?</b> “A carbon offsetting fund should be used as a last resort”</p> <p style="text-align: right;">Neither agree nor disagree.</p>
<p>E1092</p>	<p><b>Carbon Neutrality - Sustainable Development Objectives</b>  4.7. Page 12 of the SIP document sets out District’s current Sustainable Development Objectives. A key theme identified within these overarching objectives is ‘sustainability’ and an aspiration to meet the carbon neutrality targets for the District.  4.8. Not all of the Sustainable Development Objectives would be relevant to the Site. However, we do highlight the following WCC aspirations which we consider could be relevant at this stage:  - To positively contribute to achieving a carbon neutral district by 2030 through appropriately located development, good connectivity and sustainable design.  - To reduce the number of places that experience poor air and water quality.  - To reduce waste and exceed current recycling targets.  - To enable communities to respond and adapt to the effects of climate change ensuing that development is appropriately designed and located and can be adapted.</p>

- To ensure that development provides biodiversity net gain, and does not increase the loss of habitats or the risk of flooding and overheating.
- To require development to be resilient to climate change challenges, innovative, energy efficient, sustainably constructed and designed and meet health and well-being needs.
- Support development which is designed in a manner that actively encourages people to live, work and spend locally and supports a sustainable tourism economy.
- Support and ensure that new development is served by the appropriate infrastructure including cycling and walking, public transport, access to support superfast broadband and good mobile phone connectivity.
- To achieve a transport system that is balanced and is focused on sustainable transport modes that provides everyone with a real choice whilst supporting walking and cycling and tackles in and out commuting.
- To provide and broaden the choice of homes to meet the identified need of our communities and to support long term economic growth.
- To develop a built environment that is focussed more on people than private cars and respects and responds to local character so that we create communities and places where people want to live, work, study and play.
- To aim to create communities that are focussed on green spaces, reduces health inequalities and creates a healthy environment in the district by having good access to services, schools and facilities within walking distance.
- To protect and enhance open space and community facilities as spaces for social engagement and community building/ empowering neighbourhoods; ensure new developments provide spaces for social interaction and the building of new community networks.

*Consultation Questions:*

4.9. The SIP document outlines a series of questions concerning the proposed Sustainable Development Objectives. These are set out below, alongside our relevant responses:

**Consultation Question Our Response**

***1. Do you agree with the Sustainable Development Objectives that have been set out above? For each of the objectives do you: agree with the objective; agree that the objective reflects the key issues that are facing the district; agree that the objectives support the fundamental aim of the Local Plan to achieve carbon neutrality?***

At this stage, we support the abovementioned Sustainable Development Objectives. We consider these to comprise a robust approach to addressing the needs of the District, and in due course, formulating relevant emerging Local Plan policies.

We welcome the opportunity for emerging Local Plan policies to:

	<ul style="list-style-type: none"> <li>- Help contribute towards WCC being carbon neutral in the future;</li> <li>- Proactively address climate change through the design of new development;</li> <li>- Ensure high-standards of biodiversity are achieved within development schemes, including an aspiration for a biodiversity net gain to be achieved;</li> </ul> <p><b>2. Do you have any other comments about the Sustainable Development Objectives?</b></p> <ul style="list-style-type: none"> <li>- Ensure that development does not increase/exacerbate local flooding issues through careful and proactive design;</li> <li>- Ensure that new development is served by the appropriate infrastructure including cycling and walking, public transport, access to support superfast broadband and good mobile phone connectivity.</li> <li>- Robustly address other transport-related considerations which may arise from new development.</li> <li>- Reduce reliance on private car use within new development and to create (where possible) communities that are focused on green spaces, reduces health inequalities and creates a healthy environment in the district by having good access to services, schools and facilities within walking distance.</li> </ul> <p>We do highlight that any emerging Local Plan policies concerning the above matters should seek to include suitable flexibility to help ensure that new development is deliverable.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>- Whilst we support the aspiration ensure high-standards of sustainability are achieved within new development, forthcoming planning policies should ensure that any sustainability requirements (i.e. BREEAM, Housing Quality Mark or equivalent) are ‘targets’ rather than absolute requirements.</li> <li>- Whilst we support the aspiration to ensure that ‘biodiversity net gain’ is achieved in new development, the extent of any net gain required should be determined on the basis of site-specific characteristics and opportunities.</li> <li>- We support the aspiration to minimize the use of private cars within new development, and the other proposed sustainable transport objectives within the SIP. However, any future policy on these matters should acknowledge that there is a not a ‘one size fits all’ approach towards ensuring these principles within new development.</li> </ul> <p>Ultimately, the package of sustainable transport measures and design principles within new development should be the result of site-specific discussions between planning applicants, WCC and HCC in due course (in the lead up to planning applications being prepared).</p> <p>We address the above matters in further detail within subsequent sections of this Representation.</p>
E1114	<p><b>Sustainable Development Objectives</b></p> <p><b>Do you agree with the Sustainable Development Objectives?</b></p> <p>Wates broadly agrees with the Sustainable Development Objectives set out in the consultation document.</p>

	<p><i>Q: Do you agree with the sustainable social development objectives?</i>  <i>Q: Do you have any other comments about the sustainable development objectives?</i></p> <p>5.11. Crown Golf agrees with the Council’s proposed Local Plan objectives and agrees that they reflect the key issues that are facing the District. Crown Golf wholeheartedly support the principle of sustainable development, recognising that there is a balance required between facilitating growth, supporting local communities and protecting the environment.</p> <p>5.12. The proposal for SWGC supports sustainable development within Winchester as the Vision for SWGC responds to the three spheres of sustainability. Development will support the Council in meeting its housing needs, whilst using undesignated land to provide a logical extension to Winchester City, responding to the environmental and societal needs in the area, as well as the benefits of locating development in accessible locations.</p>
E1121	<p><b>SUSTAINABLE DEVELOPMENT OBJECTIVES</b>  <b>Do you have any other comments about the Sustainable Development Objectives?</b></p> <p>The objectives contained within the SIP document broadly reflect the three strands of Sustainable Development, as set out within the NPPF, and in this respect are uncontroversial. However, as set out the use of the themes is somewhat repetitive, and they appear under the different strand-headings suggesting a lack of clarity in how they are being applied – are they ‘overarching’ or are they to be considered only in relation to achieve individual ‘element’ of the plan? The NPPF treats them as overarching objectives, and therefore they must be treated in this manner as a set of development principles that should relate to the allocations that are carried forward and development management decisions that are taken.</p> <p>There is no specific requirement to adhere to the three-stranded approach described by the NPPF, namely separate <b>Economic</b>, <b>Social</b> and <b>Environmental</b> objectives, provided that the essence of each is translated into the objectives that the Plan sets for all development. In this respect, and mindful of the degree of repetition it is suggested that the Council should instead streamline the objectives into two categories where the challenge for development is to strike an appropriate balance between environmental and societal objectives. The criteria currently expressed separately as ‘social’ and ‘economic’ objectives should be combined within a single ‘societal’ category, given the interconnected nature of these considerations.</p> <p>In the Covid/post-Covid era it is realistic to expect that the blurring of home and work boundaries and the patterns and methods of working, living, travelling, socialising, and recreating that have been subject to accelerated change since the start of 2020 will not disappear. There is every reason to</p> <p style="text-align: right;"><b>Societal Objectives</b></p>

	<p>expect that there will be a much greater degree of inter-connectedness between the economic and social objectives outlined within the NPPF, and to an extent also a blurring of the boundaries between environmental and societal objectives. The imperative to achieve net gains across the three current strands is ever more important and it would therefore be appropriate to adopt the approach outlined within the table below. This would provide a much clearer and stronger message of the need to balance human activity and environmental consequences in a compatible and mutually beneficial manner. The themes contained within the SIP consultation document could be consolidated and summarised broadly as follows: <b>Environmental Objectives</b></p> <p>Spatial/locational policies and decisions that promote resource optimisation and carbon neutrality</p> <p>Promote functional and virtual connectivity</p> <p>Promote of Sustainable design</p> <p>Reduce waste</p> <p>Promote recycling</p> <p>Promote Sustainable construction</p> <p>Promote Energy efficiency</p> <p>Promote Renewable energy</p> <p><b>IF THE LOCAL PLAN INCLUDES A STRATEGIC POLICY ON CLIMATE CHANGE WHAT ARE THE KEY ISSUES THAT THIS POLICY SHOULD COVER?</b></p> <p><b>Are the possible Local Policy approaches ambitious enough and how would you rank them in order of priority? What else can the Local Plan do to assist with moving the district towards zero carbon?</b></p> <p>The SIP Consultation Document refers to development management tools that could be used to address the effects of climate change. The consultation is currently focussing on fabric level details (such as overheating,</p>	<p>Deliver high quality employment</p> <p>Reduce the need to travel</p> <p>Promote Live/work/consume/recreate locally</p> <p>Promote sustainable travel choices</p> <p>Deliver Superfast broadband</p> <p>Deliver homes for all</p> <p>Promote sustainable modal shift (transport)</p> <p>Deliver high quality Green infrastructure for all</p>
--	--	---

	<p>SuDS, water efficiency and food production), all of which are important but cannot be fully meaningful without first exploring how the spatial strategy of the Local Plan should most appropriately be formulated to address the Council's Climate Emergency agenda.</p> <p>The critical determinant in achieving the drive towards carbon neutrality, which the Council has defined as its overarching objective for the Local Plan, will be the spatial/locational strategy that the Council chooses to adopt in delivering the growth requirements that the Plan should manage. It is this first step that will determine how and to what extent other detailed and specific policy interventions need to be made to support the overarching objective. To illustrate the point, a concentrated development strategy focussing strategic scale growth to the north of Winchester, as advocated within these submissions, offers significant potential to deliver a comprehensive array of community/social, physical, green, and sustainable transport infrastructure to support the internalisation of trips and reduce travel demand. Such a strategy has potential to reduce transport-based CO2 emissions, compared to a spatial strategy that spreads growth across a number of smaller, widely dispersed sites where opportunities to create balanced self-sufficient neighbourhoods are diminished. The choice of spatial strategy necessarily influences the range of measures that would subsequently need to be deployed in respect of housing/property development and applied energy strategies that would be required to assist in the drive towards achieving carbon neutrality. Macro level spatial interventions should be the first consideration in developing a carbon neutral development strategy because this will determine the range and type of micro level interventions that will be necessary to achieve the necessary levels of behavioural change.</p> <p>Concentrated growth at scale, at the principal urban centre in the district offers unrivalled potential to:</p> <ul style="list-style-type: none"><li>• Reduce travel demand</li><li>• Reduce energy demand, and</li><li>• Provide for balanced growth with sustainable access to community facilities, shops, leisure facilities, workspaces, green space, and sustainable transport infrastructure</li></ul> <p>Macro level spatial policy decisions will have the greatest effect on how people live, work, and move within the District and represent the first logical step in defining a carbon reduction strategy. Decisions and policy interventions relating to building fabric, energy demand management, and resource consumption should follow these strategic decisions because the scale/level of intervention that may be required to achieve the overarching carbon neutrality objective will be the product of the spatial strategy that is adopted. The Council's strategic policies relating to climate change should therefore initially focus on: 12</p>
--	---

- Spatial Strategy: delivering balanced growth, built on 15/20 neighbourhood principles, with sustainable access to facilities, workspaces, green spaces and sustainable transport choices.
- Place-making: creating inclusive, functional, and beautiful places.
- Movement Strategy: Reducing the need to travel, focussing on delivering a modal shift in transport and encouraging self-containment.

The RTPI's research paper on 'the role of spatial planning and place-based solutions' (January 2021) explores the way in which the planning system can deliver place-based visions which meet ambitious targets for trip reduction, modal shift and carbon reduction, alongside other economic, social and environmental objectives. The research paper supports the case for a radical shift towards a new model of integrated spatial planning, underpinned by a strong place-based vision and focused on the delivery of ambitious, cross-cutting outcomes. In developing its strategic climate change policies, the Council should be drawing on these cross-cutting themes, thinking spatially and creatively about how the spatial strategy can truly integrate transport and land use planning without being blinkered by conventional fabric approaches to sustainability.

The research undertaken by the RTPI confirms that a switch to cleaner fuels only accounts for approximately half of the necessary emission reductions, reinforcing the need for a 'do everything' approach. To achieve the Council's climate change goals, the Local Plan vision and strategy must be bold, creative, and forward thinking. Important in this regard is for the Council to be ambitious, working proactively in partnership with those responsible for delivery to achieve better outcomes for the environment and community. Strategic policies should not be constrained by predetermined views on the amount of development to be planned for, but rather work to proactively initiate and shape change to achieve better outcomes that are tailored to the district's potential.

There are many aspects of the RTPI's research that align closely with the SIP themes and sustainable development objectives for the district. Similarities can be drawn between Winchester City as the district's principal settlement and the RTPI's fictional town 'Castlemore'. The Castlemore example illustrates the opportunities presented by new areas of growth that are located to maximise the use of sustainable modes of transport from the outset, unlocking investment in public transport, strategic cycle routes and shared mobility. The key features of the vision underpinning the Castlemore example that can align with vision for growth to the north of Winchester City, which include:

- A 15-minute neighbourhood which includes access to local amenities such as shops, doctors, and schools to enable local living.

- A growth zone located on high quality public transport routes and designed around principles of local living, facilitating a modal shift in transport to use to make a step change towards net zero emissions.
- Community hubs, shared spaces, and co-working opportunities supported by digital connectivity to facilitate flexible working.
- Integrated public transport networks and mobility hubs providing alternative modes of transport within the city.
- Active travel connections provided through high quality strategic green infrastructure that provides an attractive and tranquil space for residents and habitats, to support nature and biodiversity recovery.
- Car-free spaces to facilitate healthy streets, active lifestyles and mixed-use urban renewal that reduces emissions

Micro level policy interventions such as building fabric and construction are most appropriately addressed by nationally set standards and regulations. The NPPF (Paragraph 150) and PPG makes clear that any local requirements for the sustainability of buildings should reflect the Government's policy for national technical standards: when setting any local requirement for a building's sustainability, LPAs should do so in a way consistent with the Government's zero carbon buildings policy and adopted nationally described standards. The 13

Government's Future Homes Standard (FHS) is the direction of travel for nationally set technical standards – it will set the benchmark for environmental standards for all new housing, including a commitment to removing traditional fossil fuel heating systems, from 2025, with interim measures taking place from 2021.

The Government published its response to the FHS 2019 consultation in January 2021. As set out within the response, from 2025 the FHS will deliver homes that are 'Zero Carbon ready'. The Government intends to implement the FHS in 2025: a full technical specification for the FHS has been accelerated and will be consulted on in 2023, followed by the introduction of the necessary legislation in 2024. Ahead of the implementation of the FHS in 2025, the Government is introducing an interim uplift to Part L of the Building Regulations, which will include provisions for low carbon heating systems and heat pumps as primary heating technology in new homes. The interim uplift is proposed to take place in 2021 and will encourage homes that are future proofed for the longer term. These homes will be expected to produce 31% less CO2 emissions compared to current standards. The Government recognises that the FHS will be challenging to deliver in practice and it is for this reason that interim measures are proposed to ensure that all parts of industry are ready to meet the Future Homes Standard from 2025. The Government is therefore clear that the FHS transitional arrangements are needed to support the successful delivery of the FHS in 2025, enabling the market and supply chain to adapt, and taking into consideration market factors. New planning reforms, expected to be implemented before the end of this

	<p>Parliament, will clarify the longer-term role of local planning authorities in determining local energy efficiency standards. The reasonable expectation based on the Government’s ‘Planning for the Future’ White Paper’ is that the NPPF will be the primary source of policies for development management purposes moving forward. The Council should be working towards delivering policy that is in accordance with these nationally prescribed standards and therefore should be accepting that the most effective means via which it can deliver locally specific climate change/ carbon neutrality gains is via a positive and comprehensive locational strategy that drives behavioural change and maximises the potential to reduce travel demand.</p> <p><b>Do you agree or disagree with the following statement? “A carbon offsetting fund should be used as a last resort” If you agree with the establishment of a carbon offsetting fund, how should this money be used?</b></p> <p>A climate change intervention fund could be a feasible method of collecting pooled contributions from small scale non-strategic developments. By adopting a climate change mitigation infrastructure development plan, non-strategic growth could contribute towards the implementation of specific projects via a CIL type of charge, the pooled contributions from which could be used to fund carbon reduction projects across the district. Such a fund could help to achieve some of the ‘100 small wins’ identified as a desired outcome from the ‘One Great Win’ consultation exercise.</p>
E1128	<p><b>LOCAL PLAN OBJECTIVES</b></p> <p><b>1. Do you agree with the sustainable environmental development objectives?</b>  <b>Please tick all that apply.</b></p> <p>No detailed comments are offered, but Vistry Group supports sustainable development objectives generally. The new North Whiteley extension comprises well planned new neighbourhoods which balance the achievement of economic, social and environmental objectives. A wide range of sustainable development infrastructure is being delivered to support the growing local community at Whiteley. The opportunity for a further extension at this location that builds upon this success should be utilised.</p> <p><b>2. Do you agree with the sustainable economic development objectives?</b>  <b>Please tick all that apply.</b></p> <p>No detailed comments are offered, but Vistry Group supports sustainable development objectives generally. The new North Whiteley extension comprises well planned new neighbourhoods which balance the achievement of economic, social and environmental objectives and where a wide range of sustainable development infrastructure is being delivered to support the growing local community. The opportunity for a further extension at this location that builds upon this success should be utilised.</p> <p><b>3. Do you agree with the sustainable social development objectives?</b></p>

	<p><b>Please tick all that apply.</b></p> <p>No detailed comments are offered, but Vistry Group supports sustainable development objectives generally. The new North Whiteley extension comprises well planned new neighbourhoods which balance the achievement of economic, social and environmental objectives and where a wide range of sustainable development infrastructure is being delivered to support the growing local community. The opportunity for a further extension at this location that builds upon this success should be utilised.</p> <p><b>4. Do you have any other comments about the sustainable development objectives?</b></p> <p>It is important that a comprehensive approach is taken that recognises the importance of deliverability / viability.</p>
E1133	<p>Local Plan Objectives</p> <p>3.1. As stated in the National Planning Policy Framework (NPPF) 2019, the purpose of the planning system is to contribute to the achievement of sustainable development, through the delivery of economic, social and environmental objectives. While acknowledging the serious challenges required to achieve it, we welcome the Council's carbon neutrality target for the District. However, we believe that the purpose stated in the NPPF should be Winchester District's Local Plan's stated goal. Achieving sustainable development in the planning process will result in overall carbon reductions, while also delivering important objectives as laid out in the NPPF (including building a strong economy, supporting strong, vibrant and healthy communities, providing the right number and type of homes to meet local housing needs and protecting and enhancing the natural, built and historic environment).</p> <p>3.2. It is important that the final sustainable development objectives agreed provide a framework to enable the sustainability of the new Local Plan to be appraised and assessed.</p>
E1137	<p><b>Sustainable Development Objectives</b></p> <p>Waltham Chase is identified within Local Plan Part 1 as a larger village, serving as a focal point for smaller settlements. Provision of modes of sustainable transport within Waltham Chase can be enhanced through development of the Filditch Farm site. Upgrades to existing infrastructure and local public transport provision would allow for improved, safer walking and cycling routes and enhanced accessibility. Dandara would welcome opportunity to work with the Council and local community to achieve the environmental, economic, and social objectives as set out within the consultation document through development of the site.</p>
E1138	<p><b>SUSTAINABLE DEVELOPMENT OBJECTIVES</b></p> <p>My client agrees with broad approach to sustainable development objectives as set out. However, it is important that these objectives are aligned with current and emerging national planning guidance. It is appreciated that the reforms to the planning system currently being considered by the government do not provide the necessary</p>

	certainty in which to assess this alignment, nor indeed the evidence to justify any policies or proposals that seek to go beyond the national policy position. This will require further review as the Local Plan progresses.
E1149	We agree that the Sustainable Development Objectives will be the primary considerations in choosing between these alternatives. Further, it is clear that the action necessary to address the Climate Emergency and work towards the target of achieving zero net carbon development, are the essential elements in the consideration of the Strategic Alternatives.
E1182	<p><b>Objectives:</b> We quibble with the overarching <b>Objective of Carbon Neutrality</b> only in that the Extinction Crisis is of equal weight and inseparable from the Climate Crisis. We believe the Council understands that, but it would do no harm to state it formally. We have to be careful to mean what is said by ‘<i>sustainable development</i>’ because the phrase has become cant – in many government departments it has acquired the meaning ‘<i>development that can be sustained</i>’. Highways England, for example, refers to sustainable road development. We are sure that the Council does not descend to this cynical level, but there are hints (particularly in the economic objectives) of beliefs in eating cakes and having them. 6</p> <p>The <b>Environmental Objectives</b> are consistent with the overarching Objective (provided that objective is extended as suggested), but they are surely not complete? Where, for example, are objectives related to land use (e.g. soil protection, carbon sequestration, localisation of food production, etc.)? Protection and enhancement of landscape and cultural heritage are surely environmental objectives, even if they are not ecological ones.</p> <p>The <b>Economic Objectives</b> are a strange mixture of objectives and assumed paths to the realisation of objectives. Why is it assumed, for example, that an employment objective necessitates the provision of new offices? You may decide that offices are needed but new offices, <i>per se</i>, cannot be a rational objective in itself. In any case the pandemic and the technologies that have fed on it ought surely lead us to a lot of questions about the need for offices in the future – we might well be disposing of much office space.</p> <p>More concerning is the failure to appreciate that the economic orthodoxies of the past are mostly inconsistent with the overarching objectives. We cannot assume that perpetual economic growth is consistent with a sustainable future – the very measures of this supposed economic success (e.g. GDP) are highly correlated with resource depletion and environmental degradation. There is no evidence to show that they are likely to be ‘decoupled’ in the future. We should be avoiding the language of growth altogether and talk instead about quality of life and fairness of distribution. The <b>Social Objectives</b> seem consistent with this, though even there the old notion of ‘<i>long-term economic growth</i>’ creeps in.</p> <p><b>Questions:</b> <i>Do you agree with the Sustainable Development Objectives</i></p>

*that have been set out?* Largely yes, but see below.

*For each of the objectives, do you:*

- *agree with the objective?* The Environmental Objectives are hardly complete and should include land-use and non-ecological objectives. The Economic Objectives are incoherent and mix up objectives and supposed policies for achieving them, some of which are suspect. They are also tainted by old economic orthodoxies inconsistent with the realities of the overarching need for a sustainable environment.
- *agree that the objective reflects the key issues that are facing the district?* This question peculiarly precedes the actual specification of the key issues. Generally the answer is yes, with some caveats that are best discussed under our response to the key issues themselves.
- *agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?* Largely yes, with the caveats stated.

**Issues:** We are not very comfortable with the grouping of disparate matters here. The headings are of different kinds and it was not necessary to lump them together. Issues of transport and housing and deliverability are clearly matters to make plans about, which will reflect the choices we want to make about how we live. The headings of Carbon Neutrality and Biodiversity can no longer be perceived as coming into the same category of matters of choice. They were once, when we thought the planet, its resources and its ability to regenerate were infinite. We all know now that these are, literally, existential matters; they are not choices they are imperatives; they are boundary conditions on our choices. The Plan already seemed to recognise that with its 'overarching objective' of sustainability; it seems odd now to move it back to being a mere issue amongst others.

Referring back to the Raworth doughnut, the *Ecological Ceiling* is the existential boundary condition to whatever we propose to do. Without it the future is unsafe, physically unsafe, unsafe for all lifeforms and unsafe for humanity. Unless we consider extinction to be a choice, we have no choice. The *Social Foundation* of the Raworth doughnut does represent a choice of sorts – it depends who makes the choice. Those who govern us could make the choice that we live in a society of extremes of wealth and poverty. It may not be socially or politically sustainable, but we cannot be sure - for most of history, most of the population of the world has existed under such conditions of unfairness. 7

Social justice may not be an existential constraint, but we are sure that everyone concerned with this Plan will consider that there has to be a Social Foundation, so that the ecological and fairness constraints bound the 'safe and just space'. But fairness and social justice looked at as a boundary of our living space can no longer be regarded as a safety net *de minimis*; it dictates a whole new way of looking at the economy and our behaviour. A

	<p>range of wealth seems inevitable, and a range of wealth may reasonably be converted to a range of choices on certain matters, but fairness makes some choices now seem unreasonable. By way of example, we could choose to take cars out of Winchester, by pricing them (through car park charges, workplace levy, road pricing etc.) and this is perfectly reasonable to a certain extent (it is merely recovering the externalities of car driving), but taken to extreme a very few rich people could buy access to the streets that the rest could not. As in wartime, wealth was supposed not to give privileged access to food through a process of rationing, so one could imagine certain rationable activities to meet the climate exigencies. Rationing of aviation trips seems much more just than frequent flyer taxes.</p> <p>So Issue 1 and Issue 2 are not like the other issues as they are firm constraints. Nevertheless we will comment on them under their headings below. There is no specific Issue that represents the constraint of Social Foundation, but some of the issues (e.g. Houses for All) imply an unspoken constraint.</p>
C597	<p><b>Sustainable Development Objectives</b>  <b>Do you agree with the Sustainable Development Objectives that have been set out above?</b></p> <p>The second social objective sets out to 'provide and broaden the choice of homes to meet the identified needs of our communities and to support long term economic growth'. In this respect the plan should be more explicit in stating that it will need to boost housing supply and provide land to meet as a minimum it's identified housing requirement over the plan period. Furthermore, housing affordability is acknowledged as a key issue for the Local Plan and this should also be more explicitly acknowledged in the social objectives.</p>
E1209	<p>Local Plan Objectives (question 4)</p> <p>13. The consultation document sets out the key spatial planning objectives which the new local plan needs to meet under three headings: environmental (7 objectives) economy (8 objectives) and social (7 objectives) as set out in section four. These are not the same as those included in the Winchester District Local Plan Integrated Impact Assessment Scoping Report (July 2020) prepared for WCC by consultants LUC. See Table 5.1 of the Report which sets out 14 objectives. Whilst the content of both sets of objectives is similar having two different sets is confusing in terms of understanding how the content of the local plan will be assessed.</p> <p>14. The objectives set out in the consultation document do not provide a particularly helpful framework in assessing policies and proposals. A number of the objectives are written in very subjective terms against which it would be relatively easy to judge that a policy or proposal met that objective. It would be helpful if they could be drafted in a manner which enabled more objective assessments to be made which would highlight the differences between policies and proposals in a meaningful and helpful way.</p>

	<p>15. Given that the over-arching objective of WCC is to achieve carbon neutrality it would be reasonable to expect an appraisal of the local plan in terms of how the policies and proposals would deliver the objective. In particular the carbon credentials of each of the strategic approaches for the distribution of development should be assessed against a set of criteria which could differentiate between them in terms of their carbon neutrality credentials. The extent to which they contributed to achieving the objective could then be assessed against their impact on other aspects of sustainable development as set out in the NPPF.</p> <p>16. Such an approach is potentially fraught with challenges regarding the assumptions and calculations on which the carbon impact would be based. An alternative approach which would entirely consistent with the NPPF would be to have as the over-arching objective the delivery of sustainable development which would encompass the reduction in carbon emissions and the other key components of sustainable development i.e.; strong and competitive economy, meeting housing needs, supporting community’s health, social and cultural well-being, protecting and enhancing the natural environment.</p> <p>17 Notwithstanding the concerns expressed above HPC supports the objective of ensuring that new development does not increase the risk of flooding. Hursley village has a history of flooding from groundwater, since the 1990s it has experienced six significant flooding events. The village lies in a shallow valley with rising land to the west, north and east and a high-water table results in water flowing south through the village.</p> <p>18. WCC want to develop a built environment that is focussed more on people than the private car. However, in rural communities such as Hursley the car is likely to remain a key means of transport for the foreseeable future and new development should make the appropriate parking provision. The lack of sufficient parking can undermine the way in which an area functions leading to inappropriate parking and unnecessary stress for residents concerned about where they can leave their vehicles.</p> <p><b>Q4. There are too many objectives, many of which are unmeasurable and repetitive and which could be simplified. The fundamental objective of a local plan is to deliver sustainable new development.</b></p>
E1218	<p><b>SUSTAINABLE DEVELOPMENT OBJECTIVES</b></p> <p><b>Do you agree with the Sustainable Development Objectives that have been set out in the Strategic Issues and Priorities consultation document? For each of the objectives, do you:</b></p> <ul style="list-style-type: none"> <li>• • agree with the objective?</li> <li>• • agree that the objective reflects the key issues that are facing the district?</li> <li>• • agree that the objective supports the fundamental aim of Local Plan to achieve carbon neutrality?</li> </ul>

	<p><b>Environmental objectives</b>          Agreed, but see also our response to the next question on other comments below.</p> <p><b>Economic objectives</b>          There are eight objectives and we agree they satisfy the three questions above subject to the following comments:</p> <ul style="list-style-type: none"> <li>• Although the objectives are generally supported, they are too general and should be given greater definition once a green economic strategy has been developed. The objectives in the Council Plan 2020-2025 are much clearer.</li> <li>• The meaning of the third objective is unclear. How does the design of development encourage people to live, work and spend locally and what is the link to sustainable tourism?</li> <li>• The fourth objective would be improved by including reference to existing economic strengths.</li> <li>• After ‘Actively encourage development’, include words such as ‘which sustains current strengths in areas such as health, education and local government’ and then continue with ‘while also supporting the needs of new businesses... green growth sectors’.</li> </ul> <p><b>Social objectives</b>          There are seven objectives; we agree these, subject to the following:</p> <ul style="list-style-type: none"> <li>• The first objective about transport needs to be amended to reflect the urgency in achieving radical change. Delete the word ‘balanced’ which implies modest change. We suggest ‘a transport system that delivers comprehensive public transport options’ and continue as drafted ‘whilst supporting walking...’.</li> </ul> <p><b>Do you have any other comments about the Sustainable Development Objectives?</b>          Given the acknowledged importance of Winchester’s heritage including its buildings, the Trust would like to see this aspect included in one or more of the three objectives. The NPPF refers to the need for a positive strategy for the historic environment which takes into account the social, cultural, economic and environmental benefits that this can bring. 4</p> <p>Winchester is widely appreciated for its heritage which contributes to all three sustainable development objectives.</p>
E1221	<b>Local Plan Objectives</b>

	<p>1. Do you agree with the sustainable environmental development objectives?                  2. Do you agree with the sustainable economic development objectives?                  3. Do you agree with the sustainable social development objectives?                  4. Do you have any other comments about the sustainable development objectives?</p> <p><b>Our Response</b>                  Too much emphasis is placed on Carbon Neutrality when the Local Plan focus should be on building sustainable new homes.                  The Aim to make the whole District Carbon Neutral by 2030 is unrealistic and the timescales doomed to fail because it is not in line with the UK National objectives of 2050. There are far too many objectives that fail to take into consideration the diversity of the whole district.                  Whilst we have no problem with the overall Objectives, plans need to be formulated, costed and implemented in stages, with key reviews built in to measure success. The Local Plan will fail if it does not deliver sustainable new development whilst at the same time understanding the cost involved and helping existing housing stock to adapt and change to become more carbon neutral.                  In addition to Housing: Highly desirable flexible, affordable and appropriate Business facilities (land, premises, parking) and highly effective infrastructure (freely flowing traffic, mains gas, mains sewage, high speed broadband etc) for housing and businesses.                  Emphasis on <b>effective</b> if isn't effective it will not be sustainable. Whereas there is a huge danger of inappropriate emphasis on sustainable not being effective and ultimately not sustainable.</p>
E1224	<p>this will be achieved through the Local Plan, including measurement and subsequent action plans. See, for example, Hampshire County Council detailed plan with objectives on climate change.                  3 Strategic policy-making authorities will also need to consider the objectives in the government's 25 Year Environment Plan to reduce the damaging abstraction of water from rivers and groundwater, and to reach or exceed objectives for rivers, lakes, coastal and ground waters that are specially protected.  <b>We suggest, though, that the over-arching objective (this is a Local Plan, after all) is to produce an effective, holistic approach to environmental, social and economic issues, as set out in the National Planning Policy Framework 2019 (NPPF), if it is to deliver sustainable development. If careful choices are made, such a plan will rightly lead to important reductions in carbon emissions whilst strongly supporting the other key components of sustainable development: a strong and competitive economy, meeting</b></p>

	<p><b><i>housing needs, supporting health (mental and physical), social and cultural well-being, and protecting and enhancing the natural environment. These issues are inextricably linked and must be balanced.</i></b></p> <p><b>Sustainable Development Objectives</b> - A few general points are made below concerning the objectives listed in the consultation, before turning to more detailed comments.</p> <ul style="list-style-type: none"><li>• <b>How</b> will the plan be assessed to deliver sustainable development and important reductions in carbon emissions?</li><li>• Objectives should <i>specifically</i> include:<ul style="list-style-type: none"><li>o A clear, unambiguous objective to use land ‘... <i>in a way that makes as much use as possible of previously-developed or ‘brownfield’ land</i>’, as specifically stated 117, Chapter 11 of the NPPF.</li><li>o A strong focus on regenerating existing urban areas that will also attract business and communities post-Covid.</li><li>o Stronger recognition of the value - in economic, social and environmental terms – of retaining the character and setting of Winchester town, the market towns and villages in the District and particularly the countryside and the benefits provided, including well-being and the important ‘sense of place’. This will reflect NPPF paragraph 170 (b) requiring planning policies to recognise the benefits from natural capital and ecosystem services.</li><li>o Unambiguous commitment to affordable and social housing to facilitate retention of young people in the District and maximise their talents.</li></ul></li></ul> <p><b>Water quality &amp; quantity issues</b> - Winchester District is home to many of the country’s iconic chalk streams, vital tourist attractions but increasingly threatened by pollution that damages the food chain for wildlife.</p> <ul style="list-style-type: none"><li>• Important sources of pollution are ground water run-off, domestic grey water and sewage that enters aquifers and rivers, like the Test and Itchen, flowing into the Solent and its harbours, causing significant problems to the environment and wildlife.</li><li>• Historic bore holes in the District that supply drinking water can be badly affected by activities such as new building development. For example, installations such as solar farms in the countryside can increase use of herbicides and other chemicals to keep vegetation at bay and clean panels.</li></ul>
--	---

- • Agricultural use of fertilisers can also be damaging although practises such as efficient crop rotation avoids continuous heavy application of single compounds, lessening concentrations of herbicide/pesticide residues in the soil, leaching into aquifers and rivers.
- • Excessive abstraction from rivers, mainly for new housing, also damages water quality, by ‘concentrating’ pollutants and further damaging wildlife.

These are increasingly important environmental problems and we would like to see clearer policies on this, in line with the forthcoming 25-Year Environment plan<sup>3</sup>. 3

**Urban/rural issues** - The strategy (and policies ensuing) should more clearly differentiate between urban/city environments and needs, and the rural area/market towns. Some proposals - Carbon Neutrality Action Plan, and ideas from Winchester Town Forum, for example, do not appear to provide a strong countryside voice; one size does not fit all, and not to recognise more clearly the specific characters and opportunities of each gives the review an ‘all-purpose’ feel. Indeed, it would also be helpful if Winchester *town* and Winchester *District*, including the Market Towns and Rural Area, were more consistently and clearly differentiated throughout. Failure to do this can often lead to a lack of clarity and suggests Winchester town dominance.

**Timing & evidence provided in WCC’s review**

- • The timing is difficult, of course: Covid-19 has meant a massive setback for economic issues, businesses and jobs, whilst increasing our sense of the value of social interactions and for the environment. Even short term implications are mainly conjectural, whilst medium and long term are largely unknown.
- • It is concerning that much of the data Winchester City Council (WCC) presents as evidence and assumptions made from it are out of date – some 5 to 10 years or so - and even 2020 documents were researched and written before the pandemic. We need a more sound basis on which to plan future actions, so need further assessments, together with some new work that WCC has commissioned but is not yet available.
- • Government has not finalised decisions on proposed changes to the National Planning Policy Framework, although it has acknowledged the focus should be orientated towards urban regeneration. It proposes retaining the Standard Methodology for housing numbers but as related issues regarding the SDNP are still being finalised, there may be significant effects on the District.

	<p><b><i>In view of the above, caution – pending further clarification – and flexibility are needed but without sacrificing core principles - affordable housing and protecting the countryside are key examples – or allowing loop holes in planning.</i></b></p>
<p>E1228</p>	<p><b>SUSTAINABLE DEVELOPMENT OBJECTIVES</b></p> <p>3: Do you agree with the Sustainable Development Objectives that have been set out in the Strategic Issues and Priorities consultation document? For each of the objectives, do you:</p> <p>agree with the objective?</p> <p>agree that the objective reflects the key issues that are facing the District?</p> <p>agree that the objective supports the fundamental aim of Local Plan to achieve carbon neutrality?</p> <ul style="list-style-type: none"> <li>• The Sustainable Development Objectives are presented without numerical references; therefore, it is difficult to refer to them.</li> <li>• The objectives could be simplified for clarity, removing redundant/repetitive phraseology., e.g., one 'strong' paragraph says WDLP will 'require development to be resilient . . .'; the next repetitive, but weaker, objective says 'promote and encourage . . .' the same thing (p.12). Well, what is it to be?</li> <li>• LHPC, notes that these objectives really have a hierarchical 'means-ends' chained structure, which is not clear from the way they written. Therefore, the list appears a bit repetitive in parts.</li> <li>• In general terms, LHPC supports sustainable development objectives, but we recommend you differentiate between sustainability objectives for rural communities, legacy communities and new developments.</li> </ul> <p>4: Do you have any other comments about the <b>Sustainable Development Objectives</b>?</p> <ul style="list-style-type: none"> <li>• The 'carbon neutral' District target year of 2030, while laudable, is aggressive and different from a range of Government targets to 2050 (<i>the Government has good infrastructure reasons for selecting that target date</i>). WCC is not the only actor in the District, and it does not have complete control over all the CO2 generating/reduction processes.</li> <li>• WCC needs to take care that it does not ride 'roughshod' over existing communities and their aging legacy environment in seeking to achieve sustainability targets.</li> <li>• The sustainability development objectives (Environmental) appear to place much reliance on net effects, and in that sense, this could lead to some contradictions. For LHPC, we might soon see the destruction of some</li> </ul>

	<p>pristine relict downland at Flowerdown which has not been farmed for nearly 100 years. We have yet to understand how these environmentally damaging developments could be justified and, even worse, built using environmental 'offsets' elsewhere.</p> <ul style="list-style-type: none"> <li>To implement the sustainability objectives, WCC will need to adopt a smart, holistic, transparent and flexible assessment method for development proposals. The planning policies will need to be valid, non-contradictory, unambiguous and unassailable by national inspectors. The policy 'red lines' need to be clear e.g. in flood risk areas.</li> <li>We also suggest that consideration also needs to be given to adding and supporting the important local 'Culture and Creative Sector' as an objective. Especially in the aftermath of the pandemic, when the arts have suffered, more needs to be done to support and promote a thriving local sector in this sphere. Given the general, greater awareness of the under-representation of women and Comments by Littleton &amp; Harestock Parish Council dated 9 Apr 21.</li> <li>ethnic minorities have in public art and space, attention should be given to opportunities that address this, especially if it reflects local figures and personalities.</li> </ul>
C352	<p><b>Sustainable and Development Objectives</b>          COVID has undoubtedly impacted retail space within the city and the wider settlement areas and it is therefore necessary in order to enable change to incorporate more space for leisure and associated activities and to redevelop redundant retail space into appropriate accommodation to attract young people into the city and elsewhere.</p>
E1230	<p><b>Sustainable Development Objectives</b>  <b>Question 1. Do you agree with the sustainable environmental development objectives? Please tick all that apply.</b>  <i>8 objectives with 3 questions each:</i></p> <ul style="list-style-type: none"> <li>• Agree with the objective?</li> <li>• Agree that the objective reflects the key issues that are facing the district?</li> <li>• Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?</li> </ul> <p><b>Agree with all 8 objectives [the PC can't provide informed responses to the other two options as they require a detailed understanding of the issues].</b></p>

	<p><b><i>If you disagree with the sustainable environmental development objectives, please explain why:</i></b>  <b>N/A</b></p> <p><b><i>Question 2. Do you agree with the sustainable economic development objectives? Please tick all that apply.</i></b>  <i>8 objectives with 3 questions each as above</i>  <b>Agree with all 8 objectives [the PC can't provide informed responses to the other two options as they require a detailed understanding of the issues].</b>  <b><i>If you disagree with the sustainable economic development objectives, please explain why:</i></b>  <b>N/A</b></p> <p><b><i>Question 3. Do you agree with the sustainable social development objectives? Please tick all that apply.</i></b>  <i>7 objectives with 3 questions each as above</i>  <b>Agree with all 7 objectives [the PC can't provide informed responses to the other two options as they require a detailed understanding of the issues].</b>  <b><i>If you disagree with the sustainable social development objectives, please explain why:</i></b>  <b>N/A</b></p> <p><b><i>Question 4. Do you have any other comments about the sustainable development objectives?</i></b>  <b>Because the overarching objective of a carbon neutral District by 2030 is very ambitious, WCC should focus on and monitor closely the achievability of this objective. Otherwise, the new Local Plan will be seriously undermined.</b>  <b>The objectives of the Local Plan should be SMART.</b></p>
E1232	<p>The overarching objective to achieve carbon neutrality by 2030 is ambitious. We support the objective, but do not believe it is realistically possible in the timeline outlined? The UK as a nation has a set a target for carbon neutrality of 2050.</p> <p><b>Environmental Objectives:</b></p> <p>Some objectives repetitive – need more focus on fewer specific issues e.g. energy efficient developments, sustainable construction, firmer commitment to locating new development to non greenfield sites and waste reduction.</p> <p><b>Economic Objectives:</b></p> <p>Agree - but needs to include objective to improve access to reliable and superfast digital infrastructure in more rural locations. Important as post Coronavirus, the workforce is entering a new hybrid office/home working model.</p>

	<p><b>Social Objectives:</b>                  Need review – objective list does not recognise that many communities/individuals in the rural areas of the district rely on private cars for transport. Whilst there are limited bus services, they are irregular and uneconomic. People are not able to rely on public transport to get them into work in Winchester or the train station on time for longer distant commuting.                  By 2030 the sale of petrol and diesel cars will be banned and electric vehicles are predicted to be the mainstream car of choice. There is nothing in the document introducing more charging points around the district.</p>
E1233	<p><b>SUSTAINABLE DEVELOPMENT OBJECTIVES</b></p> <p><b>3:</b> Do you agree with the Sustainable Development Objectives that have been set out in the Strategic Issues and Priorities consultation document? For each of the objectives, do you:</p> <ul style="list-style-type: none"> <li>• Agree with the objective?</li> <li>• Agree that the objective reflects the key issues that are facing the district?</li> <li>• Agree that the objective supports the fundamental aim of Local Plan to achieve carbon neutrality?</li> </ul> <p><i>Durley Parish Council are not able to agree nor disagree with all objectives, but would like to see that more priority is given to looking at brownfield sites and un-developed approved planning applications before even taking into consideration greenfield sites. It is also important to Durley Parish Council that younger residents are able to purchase or rent properties in the area rather than unaffordable larger dwellings.</i></p> <p><b>4:</b> Do you have any other comments about the Sustainable Development Objectives?  <i>Durley Parish Council believes that if smaller homes are built with younger residents In mind, or for elderly residents who wish to downside they should remain as smaller homes rather than being extended at a later date as this takes away the smaller affordable properties for sale in a small rural village.</i></p>
E1237	<p>3: Do you agree with the Sustainable Development Objectives that have been set out in the Strategic Issues and Priorities consultation document? For each of the objectives, do you:</p> <ul style="list-style-type: none"> <li>• agree with the objective?</li> <li>• agree that the objective reflects the key issues that are facing the district?</li> <li>• agree that the objective supports the fundamental aim of Local Plan to achieve carbon neutrality?</li> </ul>
E1238	<p>Local Plan Objectives                  Do you agree with the sustainable environment development objectives?</p>

	<p>Strengthen and create healthy communities that are connected, with easily accessible open spaces and green/blue infrastructure and support sustainable travel choices including walking and cycling.</p> <p>Hampshire County Council as the Local Highway Authority supports the objective of creating sustainable travel choice for communities, the use of public transport facilities to achieve well connected communities with improved air quality and health benefits, and the priorities laid out in the Winchester Movement Strategy for supporting healthier lifestyle choices.</p> <p>It is important to ensure that the design for any development scheme is appropriate to its location. Pedestrians and cyclists have very different needs, meaning that putting them together in the wrong place can create conflict and an uncomfortable environment, which may well deter some people from doing either and shared use paths are also not always appropriate for every circumstance. It should also be considered that people cycling should be physically segregated from high volume motor traffic. Designing for walking, and separately for cycle traffic, particularly on commuter routes through provision of segregated facilities, can achieve higher levels of modal shift from driving. This will be of growing importance as the number of cyclists and pedestrians increase and possibly the future use of methods such as e-bikes.</p> <p>Wider route connections also need to be considered to make these options more attractive and sustainable and not restricting users to a single neighbourhood or community. This can be achieved by working to the new cycle design guidance LTN 1/20 which provides a step change to the design of cycling infrastructure to support a positive change for users.</p> <p>Do you agree with the sustainable economic development objectives?</p> <p>Aim to provide for new offices and workspaces in easily accessible locations and to protect existing offices and workspaces which are located in areas with sustainable transport links or where they reduce the need to travel to work and which reflect ongoing changes in the way people work.</p> <p>The Local Highway Authority supports a development strategy that would locate new office and workspaces either:</p> <ul style="list-style-type: none"><li><input type="checkbox"/> Near existing services and facilities so that these can be readily accessed by walking, cycling or public transport facilities or where, if such facilities are missing these can be adequately provided and funded through development and where capacity can reasonable be provided on the local and strategic network; or</li><li><input type="checkbox"/> Within major development areas that have sufficient scale to provide local essential service and facilities.</li></ul> <p>This ensures that workplaces are accessible by sustainable modes of transport and minimises the need for trips by private motor vehicles.</p>
--	---

	<p>A well balanced and focused transport system is important to ensure effective, reliable, safe and sustainable travel behaviour is embedded in the culture of Hampshire residents. The benefits of successfully implementing this include reduced traffic congestion, lower demand for parking, lower travel costs, improved health benefits for both site users and residents using active travel and better air quality.</p> <p>Ensuring that a hierarchy of travel is achieved, whereby active travel modes and public transport are made the most accessible to everyone, with both high-quality facilities and wider destination links, is key to a sustainable transport system. By making these methods of travel the most attractive (reducing the need to use private cars) it is helping to minimise the growth of vehicle use and congestion and supports future sustainable transport methods locally and within the city centre.</p> <p>It is also important to consider the current changes in peoples working methods, with a much larger number of people working from home and more remotely due to the current Covid-19 restrictions this will most certainly have an effect on future working habits as society emerges from the pandemic. It is, therefore, important to maximise these benefits by providing high quality broadband and mobile connections to support this style of working and ensure that it is sustainable, which will in turn see a positive benefit to both the transport system and to air quality in the area.</p> <p>Support and ensure that new development is served by the appropriate infrastructure including cycling &amp; walking, public transport, access to support superfast broadband and good mobile phone connectivity.</p> <p>New development brings with it additional demand for travel. It is essential that transport infrastructure in the vicinity of development sites is improved where necessary to support sustainable access to and from new developments. This objective is consistent with the '15 minute neighbourhood' approach where residents have access to facilities within a 15 minute journey time, and active modes of transport are prioritised and encouraged so they are the most attractive option to users.</p> <p>A transitional change in the way that both cycle and pedestrian routes are designed and constructed is an important feature to ensure an increase in these modes of active transport and making these trips more manageable for users. Where possible, the segregation of cyclists and pedestrians as set out in the new cycle design guidance LTN 1\20 which provides a step change to the design of cycling infrastructure to support a positive change for users should be sought.</p> <p>Coming out of the Covid-19 pandemic, it will be essential to maximise on the positive impacts on congestion and air quality that have occurred due to a large number of people working from home and also communities that have benefitted from active travel methods as social activities. It is therefore important to ensure that high speed</p>
--	---

	<p>broadband and mobile broadband is readily available, and the provision of local working hubs are considered to support a working from home/local to home culture change.</p> <p>Do you agree with the sustainable social development objectives?</p> <p>Hampshire County Council, as a provider of adult services, support the social objectives of broadening the choice of homes to meet needs, reducing health inequalities, empowering communities, creating opportunities for social interaction, building of community networks.</p> <p>Achieve a transport system that is balanced and is focused on sustainable transport modes that provides everyone with a real choice whilst supporting walking and cycling and tackles in and out commuting.</p> <p>The Local Highway Authority considers a well-balanced and focused transport system important to ensure effective, reliable, safe and sustainable travel behaviour is embedded in the culture of Hampshire residents. The benefits of successfully implementing this include reduced traffic congestion, lower demand for parking, lower travel costs, improved health benefits for both site users and residents using active travel and better air quality. Ensuring that a hierarchy of travel is achieved, whereby active travel modes and public transport are made the most accessible to everyone, with both high-quality facilities and wider destination links, is key to a sustainable transport system. By making these methods of travel the most attractive (reducing the need to use private cars) it is helping to minimise the growth of vehicle use and congestion and supports future sustainable transport methods locally and within the city centre.</p> <p>It is also important to consider the current changes in peoples working methods, with a much larger number of people working from home and more remotely due to the current Covid-19 restrictions, as this will most certainly have an effect on the future working habits as society emerges from the pandemic. It is, therefore, important to maximise on these benefits by providing high quality broadband and mobile connections to support this style of working and ensure that it is sustainable, in turn seeing a benefit to both the transport system and to air quality in the area.</p>
E1240	<p><b>Local Plan Objectives / Sustainable Development Objectives</b></p> <p>We support the overarching objective of Carbon Neutrality by 2030 and would welcome working with WCC on this. In principle, we support the sustainable development objectives. We would welcome an additional environmental objective that reflects the update to paragraph 175 of the NPPF that any development within the setting of the National Park should be sensitively located and designed to avoid adverse impacts on the designated landscape. We agree that these objectives in principle will help WCC support their aim of the Local Plan.</p>
E1242	<p><b>Do you agree with the Sustainable Development Objectives that have been set out above?</b>  <b>For each of the objectives, do you:</b></p>

	<ul style="list-style-type: none"> <li>• <b>agree with the objective?</b> Yes for all</li> <li>• <b>agree that the objective reflects the key issues that are facing the district?</b> Yes for all</li> <li>• <b>agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality?</b> Yes for all</li> </ul> <p><b>Do you have any other comments about The Sustainable Development Objectives?</b> No</p>
E1244	<p><b>Sustainable Development</b></p> <p>The YPYP consultation document asks if one agrees with the sustainable development objectives set out in the table on page 12 along with three subsidiary questions for each. CPREH notes that the relationship between the 22 objectives presented and those (14 in total) included within the Local Plan Integrated Impact Assessment Scoping Report (July 2020) is not explained, which presents a confusing picture. The 22 objectives have 3 alternative responses, “Agree”, “Agree that the objective reflects the key issues that are facing the district” and “Agree that the objective supports the fundamental aim of the Local Plan to achieve carbon neutrality”, which CPREH suggests is rather leading and limiting. One may not agree with those three options, but would wish to comment, or suggest other objectives that may have been missed. It would certainly be easier if the objectives were numbered or labelled. It is not clear if they are of equal importance or are ranked in any manner. So, rather than respond to the specific questions asked, CPREH would make the following observations.</p> <p>The objectives should be drafted such that they provide a robust framework for assessing the local plan and the detailed policies and proposals. In particular they should enable the Council to undertake its assessment of how the local plan will deliver the overarching objective ie: carbon neutrality as currently set out or delivering sustainable development.</p> <p>CPREH considers that the over-arching objective for the local plan should be the delivery of sustainable development which could encompass the reduction in carbon emissions, but also the other key components of sustainable development and land-use planning i.e.; strong and competitive economy, meeting housing needs, supporting the community’s health, social and cultural well-being, protecting and enhancing the natural environment. Page 3 of 25</p> <p>At present the options provided later in the consultation in Issue 4 <i>Homes for All</i> do not appear to have been judged against either these 22 objectives or those set out in the Integrated Impact Assessment Scoping Report. Notwithstanding our comments above, we feel it important to point out some issues on the objectives as follows.</p>

	<ul style="list-style-type: none"> <li><input type="checkbox"/> Critically there is no objective which requires making more effective use of land, specifically brownfield land as set out in the NPPF 2019 Chapter 11</li> <li><input type="checkbox"/> There is no objective which mentions landscape, or ecosystem services that are provided by the countryside.</li> <li><input type="checkbox"/> Habitat connectivity has been omitted from the point on biodiversity.</li> <li><input type="checkbox"/> Settlement gaps should be protected, and coalescence prevented</li> <li><input type="checkbox"/> Living over the shop and the new role of the high street should be incorporated into the objective on high streets.</li> <li><input type="checkbox"/> There is no mention of affordable housing, or social housing.</li> <li><input type="checkbox"/> The transport objective fails to highlight the importance of mass public transit hubs, particularly the rail network, as being a significant way of minimising car travel.</li> <li><input type="checkbox"/> An objective on reducing the embodied carbon costs of new buildings and roads could usefully be incorporated.</li> </ul> <p>CPREH is campaigning for a South Hampshire Green Belt. PfSH has supported the principle of a Green Belt and the case for such a designation is included within its work stream on its Joint Strategy. The protection of the integrity of the settlement pattern in South Hampshire, including that part within Winchester District should be a key objective. The new local plan should include policies which retain the character and setting of the towns and villages in the District and to designate a Green Belt. CPREH believes this should be incorporated either in the Vision or the Objectives.</p> <p>These matters are discussed further below</p>
E1246	<p><b>Local Plan Objectives</b></p> <ul style="list-style-type: none"> <li>• • Overarching objective: Carbon Neutrality</li> </ul> <p>The Earth’s climate is changing faster than it would otherwise due to increased burning of fossil fuels for electricity, heating and powering transport as well as large-scale land use change associated with agriculture. In the UK, the effects of climate change will include shifts in our seasons, hotter drier summers, warmer wetter winters, rising sea levels, more extreme weather events such as droughts, flash floods and strong winds, and changes to distribution of species and habitats.</p> <p>An increasing number of local authorities across England are formerly declaring climate change emergencies, including Winchester City Council. The UK became the first country in the world to declare a climate emergency and the government have recently set in law a climate change target to cut emissions by 78% by 2035 compared</p>

	<p>to 1990 levels, which will bring the UK more than three-quarters of the way to net zero by 2050. National planning policy outlines the need for Plans to take ‘a proactive approach to mitigating and adapting to climate change’, that policies should ‘support appropriate measures to ensure the future resilience of communities and infrastructure to climate change impacts’. The Government’s 25 Year Environment Plan sets out a goal for mitigating and adapting to climate change.</p> <p>Therefore Natural England welcomes the overarching objective of the Plan for carbon neutrality. It is advised the Plan recognises and incorporates the role of the natural environment to help deliver climate mitigation and adaptation across the district. Please see further more detailed advice on this aspect below.</p> <ul style="list-style-type: none"> <li>• Environmental, economic and social objectives</li> </ul> <p>Overall Natural England supports the objectives set out for the Local Plan that reflect the need for carbon neutrality, improving air and water quality, the requirement for biodiversity net gain, and the need for healthy communities with good access to green and blue infrastructure. Please see specific comments on the objectives below.</p> <p>The Plan should include an environmental objective to protect and restore local, national and international sites designated for nature conservation.</p> <p>It is advised that the fourth environmental objective (regarding net gain and habitat loss) is amended to seek protection, enhancement and expansion of the ecological network across the district, rather than just seeking a halt to habitat loss. Please see further advice below on the multiple cross-policy benefits such an approach can achieve for the benefit of both residents/visitors to the district.</p> <p>It is also advised that the Plan’s objectives also include protection and enhancement of landscapes, including the need to ensure development within the setting of the South Downs National Park does not compromise relevant National Park aims and objectives.</p>

**8 Letter responses relating to Sustainable Development Objectives**

Letter Respondent ID	Letter Comment
----------------------	----------------

L3	<p>We must keep the productively farmed and open land around us to ensure a break in the County's growth hotspots such as Basingstoke. We need also to keep it for so many factors, many that are hard to quantify or even recognise, but cannot be replaced once they have been lost. People's health and pure mental well-being should be enough.</p>
C164	<p>I support sustainable house building in existing areas, particularly utilizing existing brownfield sites, however, new towns/developments in green fields is a step backwards for the council and the environment.</p>
C267	<p>Winchester is a beautiful area, and we need to maintain it. By building on greenfield sites, we will not only damage the environment and increase pollution, but we lose what little beautiful greenfield areas we still have. Building new settlements on greenfield areas will increase pollution and CO2, when existing brownfield sites and normal local house builds can be utilised first. The plan will be in plave for a longtime, and we need to ensure the environment is protected for the next generation. How is removing green areas a demonstration of a pro environment, reducing carbon, government and council policy? Please use the brown sites for large developments to minimise environmental impact, with small sustainable developments in existing areas, only.</p>
L14	<p>To build so many houses, plus park and ride cannot be feasible. Brownfield sites should be used first, small developments rather than massive builds on such a scale. Our local communities are funding schools. Doctors surgeries are vert over stretched. Water supply, traffic pollution, traffic congestion will be further detrimental to the area. Our need for a Green Belt around Winchester is a must. To destroy this amount of green countryside is a very bad proposal.</p>
L25	<p>Brownfield sites, such as ST John Moore Barracks and Winchester City Centre, should always be looked at first or possibly small developments in markets towns and villages (as originally suggested years ago by the Princess Royal) There are no railway stations or transport hubs anywhere near the proposed development and since the substation development around Romsey there has been an enormous increase in the traffic trying to reach the M3 along residential roads in the area. Any further development on this scale would be overwhelming. It is fallacy to think people would walk or use public transport (if it existed). They wouldn't, they would use cars. Royal down Garden Village is a complete misnomer, it would just be another area of urban sprawl, concreting over the countryside and adding flooding in the area. The whole area south of Winchester should be designated as Green Belt.</p>

L29	Yes, sustainable seems to have become a buzz word that can mean pretty much what you want it to mean. I do not really know what it means.
L42	I wholeheartedly agree that effects on climate change and your commitment to carbon neutrality must be the bedrock of your Plan. As you say, The Local Plan needs to be prepared through the climate change lens.
L50	<p>The overarching objective to achieve carbon neutrality by 2030 is ambitious. We support the objective, but do not believe it is realistically possible in the timeline outlined? The UK as a nation has set a target for carbon neutrality of 2050.</p> <p>Environment objectives Some objectives repetitive – need more focus on fewer specific issues e.g. energy efficient developments, sustainable construction, firmer commitment to locating new development to non greenfield sites and waste reduction.</p> <p>Economic Objectives Agree – but needs to include objectives to improve access to reliable and superfast digital infrastructure in mire rural locations. Important as post Coronavirus, the workforce is entering a new hybrid office/home working model.</p> <p>Social objectives Need review – objective list does not recognise that many communities/individuals in the rural areas of the district rely in private cars for transport. Whilst there are limited bus services, they are irregular and uneconomic. People are not able to rely on public transport to get then into work in Winchester or the train station on time for longer distant commuting.</p> <p>By 2030 the sale of petrol and diesel cars will be banned and electric vehicles are predicted to be the mainstream car of choice. There us nothing in the document introducing more charging points around the district.</p>

## 0 Social Media responses relating to Sustainable Development Objectives

### 1 Have Your Say Poll response relating to Sustainable Development Objectives

Respondent ID	Comments
---------------	----------

<b>H80</b>	I support the Carbon Zero priority. The mindset needed to achieve this should mean most of the other strategic goals will be achieved such as bio-diversity, living well, sustainable transport and low carbon infrastructure. Affordable housing, a vibrant economy and attracting young people to live in Winchester go hand in hand. We need to learn from European cities that are ahead of us in achieving these goals.

Strongly disagree	248
Not Answered	183

**If you disagree with the statement, please explain your reasons and your view on what new policy measures should be adopted:**

<b>Respondent Number</b>	<b>Respondent Comment</b>
C3	Existing policies have done absolutely nothing to prevent the risk of over-development in environmentally sensitive areas of international significance, notably within the downland landscape lying to the north of Winchester. Offsetting land for biodiversity net gain is a cop-out - development that impacts biodiversity negatively is the wrong sort of development.
C5	Encouraging landowners to put forward land for development threatens ALL the land surrounding settlements. There needs to be a policy which protects settlements from the planning blight this causes.
C7	I think more could be done to allow for routes of animals in development (e.g hedgehogs) and design to actively encourage wildlife (insect/ bird and bat boxes) rather than just mitigate the effect of development on the countryside.
C9	Developers know that they can eventually get passed these policies be that through legal action etc. Business always seems to win at the expense of the countryside.
C11	The new policy should address the nature crisis and policies should increase space and connectivity for wild life. At present both the abundance and the diversity of wild organisms are decreasing and ecosystems are still being threatened. Areas of woodland, scrub, grassland (including verges), river all need to be managed in a 'wilder' way.
C17	Too many developments locally have damaged biodiversity and pay little consideration to drainage or flood risk. Developments should be in brownfield sites not in open countryside.
C19	Plans such as Royaldown between Hursley and Oliver's Battery do the very opposite of protecting our countryside. We should respect and protect greenbelt.
C31	The comment has been removed as the respondent requested their response not to be published
C32	Every green space should be protected, only develop brown or grey areas.
C33	Too often we pamper to the short-term greed of developers from afar who have no long term interest in protecting the countryside or the environment. If the policy was robust the Micheldever station proposal would have not keep being resubmitted. The policy needs to cater for sustainable housing over time with the developers putting something back for every

	<p>building built.</p> <p>The Barton Farm development and the lack of a clear environmental plan shows a total disregard for the countryside. For example there was an opportunity to get the developers to put in green transport infrastructure through the northern part of Winchester. Total missed opportunity</p>
C36	<p>Priority should be given to where there is an existing by type of local play areas, playing fields &amp; green corridors</p>
C40	<p>The weasel words and presumptions in this questionnaire promote distrust more than inclusion. It feels as though you, the council, have an agenda and are just looking for unthinking support.</p> <p>It follows that protection of our countryside will be negotiated away, probably for money. Eternal asset for next year's funding gap. Dreadful.</p>
C42	<p>Living in the far south of the District, the amount of development and traffic which has happened over the past 10 years has caused a decline in the quality of life here. Recent housing developments are encroaching on beautiful countryside so the current management policies for the protection of the countryside in this part of the District are definitely NOT working.</p> <p>Development along the M27 corridor is impinging on the south of the District and I would strongly support the establishment of a South Downs green belt to stop urban sprawl developing northwards. Currently, and with the development of the new garden village/town of Welborne (FBC) - approx 6,000 homes only 3km from Wickham, there is a danger of Wickham/Knowle/Shirrell/Heath/Soberton joining up with Fareham.</p>
C45	<p>The comment has been removed as the respondent requested their response not to be published</p>
C48	<p>Powerful landowners and people with profit in monetary reasons must not be allowed to have more sway/influences.</p>
C57	<p>I have stated elsewhere in this document, and repeat here: greater emphasis is needed, not just on biodiversity which though important is less threatened here than in the Amazon over which we have no control; but also on preserving areas of food production - farmers fields - which are progressively disappearing in our area.</p>
C58	<p>I worry that off-site mitigation schemes will discourage developers from really getting to grips with their impact on the environment.</p> <p>There is always more that can be done.</p>
C59	<p>Even considering Micheldever new town and Royaldown show how off the pace policy is.</p> <p>Greenfield sites should never be developed.</p>
C61	<p>There is too much road building, traffic and badly built modern houses. Houses should enhance the countryside, look at Barton Farm, not be just boxes.</p>

C63	<p>Open countryside is at risk from speculative development because the planning system is developer driven. As far as it is legally possible, local authority planning policies should identify priority areas of countryside and direct development elsewhere.</p> <p>A green belt or equivalent protection should be ensured for the sweep of country around the city from Compton to Littleton.</p> <p>Small well designed and especially affordable development in rural settings should be encouraged where this will enhance the viability of rural communities</p>
C65	The comment has been removed as the respondent requested their response not to be published
C66	Preserving the countryside is not assured by current policies. There should be measures to provide a higher level of protection (?Green Belt)
C70	The continued discussion around a massive new town at Micheldever suggests that these protection policies are either not clear or inadequate
C75	Current controls on greenfield development are wholly inadequate. Whilst we have a Government who has significant party funding from developers and builders this is not going to change and is outside of the control of local Government.
C78	Greenfield sites are being looked at for development whereas these provide the most natural ecologically diverse environments with minimal Impact. This is not protecting those areas, instead it's the opposite
C79	<p>Lack of protection for greenfield sites and valuable agricultural land. Meeting house building targets seems to take priority over protecting the countryside.</p> <p>Countryside management policies are often weak and only pay lip service rather than offer any real protection.</p> <p>Strongly agree/ agree/ neither agree nor disagree/ disagree/ strongly disagree</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.</p>
C81	Sustainability must not be a reason to consider inappropriate major developments in rural areas
C87	<p>Strong policies are needed to prevent unwanted development on green spaces which are frequently promoted solely for financial gain rather than for sustainable development.</p> <p>Policy should focus on the use of brownfield sites, redevelopment of existing areas, and redevelopment of city</p>

	centres to reflect the changes in society driven by the digital revolution and the changes resulting from the current pandemic
C88	Any new homes should fit their site with their own space around them and groups of housing should have areas of green spaces in between and also surrounding them.
C90	I do not know.
C93	the enforcement of planning policies is non-existent or too weak
C95	if land has been deemed inappropriate for development because of: -flood risk -increased density and over development -destruction of natural habitat (SINC etc) -poor road access the decision should be maintained and not subject to repeated reviews
C97	The current policies do not promote and are not effective or adequate in protecting the countryside. There needs to be a Green Belt in south Winchester
C98	Existing measures not effective.
C99	There is around me and especially towards the larger towns too much greenfield development which means our smaller towns and roads will be overly congested.
C100	I am concerned that the countryside is being eroded. The recent Barton Farm development has changed this part of Winchester in a negative way. I am very concerned that, if the Royaldown development goes ahead it would be hugely detrimental to the South of Winchester. It is vital we preserve the beauty of our local area.
C101	Too much development on green fields is allowed. Developers ride roughshod over local considerations. Weak policies, unenforced mean destruction of our countryside already. Far stronger policies are required. Nature is suffering. The "offsite" redemption approach does NOT work. STOP allowing all this development in the first place. So called housing requirements are over stated so it looks good when the developers offer to build less! The policy should reflect existing local resident wishes. The area is their home, and that of the natural species. What we have now is totally pathetic and inadequate.
C103	The Council would like to see more green belt, more open spaces. From our experience with developers, the Council wants to see more enforcement action.
C104	Green belt is required around Winchester to protect key habitats, biodiversity and countryside amenity. Also to prevent urban sprawl and to prevent our distinct hamlets, districts and villages being overwhelmed by development.

C108	Protect our countryside from development
C110	I consider the existing policies are not effective in protecting our countryside. A Green Belt is the best way to protect the countryside and offers the highest level of protection
C111	You need to give details of what your existing policies are before one can properly comment on this issue. More robust measures are required to stop examples where developers have ignored existing development limits and planning inspectors have allowed digressions because the WCC policies and limits are not strong enough. A Green Belt would offer a very high level of protection and should be pursued with vigour.
C112	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C114	Evidence shows (Barton Farm, for instance) that the countryside can be eroded by developers who have to resources to appeal against local opinion. Projects such as this and the proposed Royaldown should be rejected out of hand.
C116	The comment has been removed as the respondent requested their response not to be published
C117	We should not build houses on green land. There are plenty of brown field sites and even empty houses that should be used.
C118	Protections of SSSI need better protection and care. Currently Natural England is so underfunded it cannot function properly. New planning regulations being brought in by the government are likely to undermine the protection of the countryside from big infrastructure projects. We are seeing increasing fragmentation of the countryside with catastrophic loss of biodiversity. Natural areas need to be linked together. Our economy is structured in such a way as to allow big business and their shareholders to hold far too much power.
C119	There is no green belt provision to the south of Winchester and there should be. Local green spaces and valuable diversity and heritage of our landscape needs to be protected. the current gap policies are inadequate - eg Texas Drive in Olivers Battery happened despite the Gap policies. A properly protected green belt is required.
C120	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C121	Some current policies are contradictory e.g MTRA 3 allows infilling of sites because there is no local plan while MTRA4 prevents infilling of sites because there is a local plan. These do not protect the countryside merely allow

	<p>decisions based on presence of a policy and no consideration of physical factors of the site.                  For example due to a local plan some sites are automatically deemed to be in the countryside when in fact they in a ribbon of residential development and not in the countryside and are part f the local settlement, but a line on a map puts them in the countryside. While other sites (where ther is no local plan) places much more open and harmful (to the countryside ) sites no protection from development.</p>
C122	<p>The current Local Plan does not make sufficient protection. The new plan must include policies to protect the countryside.</p>
C124	<p>The fields around Winchester are being filled with houses. Designate a green belt</p>
C125	<p>The developments do not include the requisite infrastructure development and are not doing enough to constrain development on greenfield land.</p>
C126	<p>I cannot see that existing policies effectively protect the countryside. In order to protect the countryside we must protect the green belt .</p>
C127	<p>Disagreement is based on what I have seen rather than knowledge of actual policy.                  However it would appear to me that biodiversity is fundamental to good mental health of residents. New developments should have many trees, hedges, water features, and wild gardens as well as parks for playing in. Hard landscaping should be minimal. All night lighting should be reduced to consider the impacts on birds and other wildlife.                  In short we should be living with existing nature, not trying to remove it and replace only what developers want to maximise profit.</p>
<b>C128</b>	<p>The comment has been removed as the respondent requested their response not to be published</p>
C129	<p>The previous Local Plan has already identified where many of new homes will be located, but the new Plan will make decisions on where the rest will be built.                  We understand that the council is asking residents for their views on four possible options for how to meet this remaining housing target.                  One of these, Option 3, is to build a large new settlement on greenfields in the district. (for example Micheldever)                  I OBJECT to Option 3 – it's the wrong option for our district as we don't need that area of countryside to be lost to new housing!                  I do not want new towns in our North Hampshire countryside – in my personal opinion its the wrong way of building new housing.</p>
C131	<p>The existing policies are not sufficiently effective in protecting significant swathes of rich and vibrant countryside lying between South Winchester and the Southampton connurbation (urban sprawl). A designated Green Belt</p>

	would offer the highest level of protection for our ancient woodland and thriving wildlife to the south of Winchester, as well protecting sites of particular archaeological and historic interest.
C133	Existing policies are not effective in protecting the countryside, clearly there are enough loopholes in the existing policies that developers can always find a way to build on greenfield sites. Green Belt designation would a more secure level of protection.
C136	Local Plan 1 an 2 started in 2011 and was a twenty year plan until 2031. However most of the targets were achieved in a very short while. As soon as the target housing was reached ,other developments were then approved making a mockery of the system. Now we have local plan 3 which is hoped to over lay 1 and 2. The main reason for this was housing requirements due to EU citizens needing to be housed. I recent survey has found over 1.3 million of those citizen have return home. Hence nationally the pressure has decreased.
C138	Current policies do not adequately drive the use of brownfield and previously developed sites across the District minimising the need to develop greenfield land.
C141	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C144	Unclear interpretation of policies. clear definition is required. Frequently VDS and conservation area appraisals are ignored.
C145	The existing policies are not effective in protecting the countryside.
C146	For the council to even consider building on greenfield sites is wrong. Use brown field sites instead. the Hampshire country side is unique and once built on can never be replaced.
C147	The existing policies are not effective in protecting our contryside. A Green Belt offers the highest level of protection. Also there is no space for further detail to question 1 but I would argue that biodiversity net gain must be provided on site.
C148	The existing policies don't seem to be effective in protecting the countryside. Green belt is the best option
C149	There is no evidence that the countryside is protected from changes of use which are damaging to wildlife and biodiversity. For example whole areas of farmland where I live are are now being divided into smaller plots with concrete yards , buildings and menage areas. The off- site mitigation issues for biodiversity are very controversial in that an eco system takes year to establish - scrub, woodland, grassland and the biodiversity therein cannot just be “ moved”. Work on building up areas/ enhancing areas for wildlife and biodiversity would be needed well in advance of any destruction of an area.

C150	I'm new to the area but all I have seen is developers be able to get passed protection policies by throwing money at plans for several years until councils run out of money or give up fighting
C151	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C152	I feel that a greenbelt is vital to offer the highest level of protection. The current policies do not protect the countryside effectively.
C155	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C156	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C157	Much more robust to stop developers getting their way after years of running council resources down
C160	Outside the South Hampshire Urban Areas, LPP1 and LPP2 have been nibbling away at countryside, field by field, on the edge of existing settlements. In some cases, this leaves narrow strategic gaps of countryside between villages which are expanding like ink-blots. If development outside the major urban centres proves essential, it would be better to concentrate development in larger zones such as Barton Farm, North Whiteley and West of Waterlooville which can be planned in an integrated way.
C161	Too much housing is removing any sense of a green belt around winchester. We need a green belt to protect winchesters countryside feel
C162	The comment has been removed as the respondent requested their response not to be published
C164	Green space protection need to be increased. There are proposal for new towns and settlements in green filed areas - this is not acceptable. Use brown field sites, and existing approved land to support sympathetic development
C166	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C167	Existing policies are not adequate- there should be a Green Belt
C168	Outside the South Hampshire Urban Areas, LPP1 and LPP2 have been nibbling away at countryside, field by field, on the edge of existing settlements. In some cases, this leaves narrow strategic gaps of countryside between villages which are expanding like ink-blots. If development outside the major urban centres proves essential, it would be better to concentrate development in larger zones such as Barton Farm, North Whiteley and West of Waterlooville which can be planned in an integrated way.

C170	From what I've seen of modern estates and backfill, there is too much density.
C172	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C174	Having seen the potential plans to create large housing developments on Farm land and golf courses, I can only assume the policies for protecting the countryside are inadequate. We need a green belt to protect against urban sprawl
C175	A strategic settlement gap between Shedfield and Waltham Chase should be retained as a priority. Such gaps provide a haven and corridor for wildlife to thrive as well as providing vistas that have shown, particularly in the pandemic, how important it is for people to have access to green space and fresh air. Such gaps also have historic and community significance. Five Oaks farm lies in the gap between Shedfield and Waltham Chase and has public footpaths crossing it; therefore no development or activity that impinges on this important gap, including quarrying or waste disposal, should take place.
C176	All developments should at least maintain the biodiversity of the site. If they can't the development should be scaled back.
C177	Agreed developments are not being completed on schedule so long term planning that affects the countryside becomes irrelevant which runs the risk of countryside being destroyed to prepare for useage but development stands idle
C180	Existing policies are not effective in protecting the countryside
C181	Existing policies have not proved effective in protecting the countryside
C182	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C186	I am not convinced that current policies are always rigorously applied and that the reasons for exceptions are clearly articulated.
C187	I do not believe that all brown-field sites have been adequately utilised thus any new development on green-field sites have not been adequately protected.
C189	Loaded questions
C191	Whole questionnaire fundamentally flawed, as a market researcher myself you are only asking questions to get the flawed answer that you and the LibDumbs want.
C192	I do not see that this plan protects the countryside and I don't see any evidence that WCC is currently protecting the countryside. For example look at the development (17/02190/FUL) that was allowed on Texas Drive.

	<p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p>
C193	<p>The current development north of the City at Barton Farm is a gross abuse of any "Policy to Protect the Countryside". Further greenfield site development should cease, existing policies appear ineffective for protection of the countryside. A "Green Belt" offers the optimum level of protection.</p>
C195	<p>Greenbelt is not being protected adequately, open spaces for exercise for all are more important than ever and being gradually diminished.</p>
C197	<p>I continue to see developments where bio diversity is being reduced</p>
C198	<p>There have been surprising development on greenfield sites. Whilst some greenfield development may be necessary (but what size are we aiming for for our towns and cities?) the protection need to be stricter. In particular we need spaces between existing communities.</p>
C199	<p>There are considerations to develop green areas that should never be considered ahead of development of brown field sites.</p>
C202	<p>I have no examples but my feeling is that protection of the countryside seems to take second place to development and green gaps are endangered</p>
C208	<p>Too many landowners have learnt that they can ignore Planning rules and use land for industrial and storage purposes, or even for residences. The lack of effective enforcement means that violations can persist so long that a LDC becomes available.</p> <p>A common "crop" in rural areas is the dwelling. You grow one by moving in livestock, then installing a mobile home so you can "look after the livestock". Then you apply for a house. Next you sell the livestock and change the use. I can point to four examples within half a mile.</p>
C211	<p>Protecting biodiversity and the natural environment is vital for so many reasons - both on local and global levels. The importance of this cannot be over-stated. As well as the well-documented need to protect the natural world, its importance in our mental and physical well-being has been particularly highlighted by lockdown.</p> <p>Just the fact that considerations are being made to develop our green spaces mean that management policies are inadequate.</p>
C214	<p>The local planners does not appear to have the resolve to protected our country side and local plans in face aggressive developers.</p>

C215	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C216	I have lived in Winchester for 45 years. During this time the population has doubled. The provision for recreational land has been reduce massively with building over many playing fields - in some cases donated by private people. Not every last piece of empty land should be built over.
C217	The policy should protect undeveloped countryside sites as a priority over brownfield sites. The current policies are considering allowing expansion of Winchester into countryside that you rightfully identify as highly valued by it's residents. Defining a green belt of land protected from development will benefit all residents.
C218	Too much green field development and insufficient brown field development
C219	The comment has been removed as the respondent requested their response not to be published
C220	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C222	The comment has been removed as the respondent requested their response not to be published
C223	Current development policy does not provide strong enough protection for the natural environment and fails to promote biodiversity. ALL developments must be required to provide biodiversity net-gain WITHIN the context of the development, not by offsetting elsewhere, this will promote both a healthy and biodiverse natural environment and improve living standards in the human environment.
C226	Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes. The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.
C227	Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes. The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.

C231	<p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.</p>
C232	<p>Threats of development on greenfield sites are highly concerning. Such developments seem to be a distinct threat in this area that is not adequately safeguarded against. Once they are undertaken, the damage is irreversible to the environment and local communities. Green belt spaces need to be consciously protected and a focus on redevelopment "city centre" space and brownfield sites needs to be a core planning aim.</p>
C233	<p>The plan to develop south winchester golf course flies in the face of this plan</p>
C234	<p>There seems to be a drive to build on green sites to the detriment of the countryside</p>
C235	<p>The developments proposed are clearly injurious to the area and would ruin the natural habitat and rural area. If such developments are not refused owing to pre-existing protection of the areas, then policy is currently clearly inadequate</p>
C236	<p>Development of brownfield and previously built on land should always be opted for before any greenfield sites are considered. Current development management policies for the protection of the countryside do not achieve this. Furthermore, there is insufficient recognition of the length of time it has taken for much countryside habitat to reach its current composition, and the consequent short-term irreplaceability of established habitat once it has been destroyed. The true environmental cost of development is not therefore adequately reflected under current development management policies for the protection of the countryside.</p>
C237	<p>The existing policies are not effective in protecting the countryside. A green belt offers the highest level of protection</p>
C239	<p>The existing policies have not been effective in protecting the countryside. A Green Belt offers the highest level of protection.</p>
C240	<p>I do not believe that current policies are anywhere near effective enough to protect the countryside. A Green Belt to the South of Winchester would offer the highest level of protection.</p>
C241	<p>Existing policies do not provide the necessary protection of the countryside. This is essential to safeguard the environment, allow more diversity and promote sustainable agriculture.</p>
C242	<p>The countryside to the South of Winchester is under constant threat and current policies are not adequate in protecting it. There needs to be a Green Belt to give the highest levels of protection.</p>

C243	Change of use and PD rights are not consistent with government statements about protecting the rural environment. WCC should lobby central government to amend national planning policy to prevent biodiversity destruction in rural areas and give rural communities more say in local development.
C244	<p>Cumulative effect of land use should be a major consideration</p> <p>Change of Use and PD rights are destroying the countryside in a piece meal process so more robust policies are needed</p> <p>Stronger requirements for indigenous planting not only for agricultural establishments but also for homes in the countryside.</p> <p>Stronger policies on appropriate fencing and landscaping</p> <p>Stronger policies on light pollution</p> <p>Rural communities should have more say in the development in their area as they know and understand the impact of the changes to biodiversity</p>
C246	<p>Not enough is done to protect the Countryside</p> <p>Allowing developers to provide mitigation off site is not tackling the issue that there is not enough land elsewhere for mitigation and developers should be made to provide on site reducing the net area they develop</p>
C248	As well as gap policies and Coast and Countryside policies of openness and the like there needs to be a clearer statement supported by Green belt policies (or policies akin to that) to ensure separation of settlements and a clear divide away from the large cities or areas of existing population/ Employment . Open Countryside must be protected against development of any sort . The need to consider Brown field allocations must be given a higher status and encouragement for development .Open countryside is an important lung and should remain so .Large sites should not be suitable for development .
C249	Looking at recent developments taking place around Winchester and current promotion of 'Royal Down' would suggest that the current management policies are inadequate not only to protect the countryside but also to protect settlement identities
C252	<p>The changes here need to be radical. Farming needs to change completely with a move from meat production to sustainable arable with biodiversity and wildlife considerations right at the top of the consideration. Large scale tree planting is urgent now as it takes a long time for trees to mature and have their beneficial impact.</p> <p>Measures need to be environmental cost and impact first not GDP.</p> <p>The situation is as urgent as a house fire. Please, please, please be bold and lead the way.</p>
C253	Green spaces must be identified and protected retaining gaps between settlements and valued landscapes.

C254	The existing policies have not effective in protecting the countryside where new developments have been considered. A Green Belt would offer a much higher level of protection.
C255	Local green spaces need to be identified and protected recognising the importance of real gaps between settlements, landscape character, local distinctiveness and valued landscapes.
C256	Answer given earlier. The pressure on Winchester area as one of the best paces in the UK to live will create ongoing pressure for expansion in ther loacl area. The plan should take a short term, medium and long term view to enhance an rptect the area. This inlcudes predictions that the population of the UK will fall by the end of the 21st century.
C257	Disagree - too much planning permission on green spaces and not enough emphasis on brownfield sites.
C261	THE existing policies are not effective in protecting the countryside.
C262	Local green spaces need to be identified and protected. recognising the importance of real gaps between settlements, landscape character. local distinctiveness and valued landscapes.
C263	I have read numerous articles in the local press in recent years where developments have been started or undertaken and retrospective planning permission has been sort. Sometimes this has been granted and other times the developer has been told to restore the site to its pre-development state. However, by the time action has been taken the damage has already been done, e.g. grubbing out of ancient hedgerows, inappropriate developments in Settlement Gaps and so forth. This would indicate that current policies are inadequate.
C264	Don't agree with any reduction in the degree of rigour in the Planning Process
C272	The fact that Royaldown could even be considered as a possibility! Use only brownfield and previously developed sites for new housing. Conserve and protect open spaces and countryside.
C273	Curious concept. Loss of biodiversity through development can somehow be replaced by "improved" biodiversity on the remainder? Which WCC officer arbitrates, and on what criteria?
C274	Lip service is given to this aspect. No consideration of impact of building on SSSI s is conserded at all. They are not even shown on building plan maps. Sustainable farming and food production has not been encouraged. This is so locally as well as nationally. Road plans and building plans should have land use in background outline and colouring to show WHAT IS TO BE LOST. Mitigation is not useful. If what is to lost is vital then the development should not happen. We expect this of Brazil-

	<p>we should expect this of ourselves. Locally we should ALL be resisting what is precious. ( Just as we expect of developing countries).</p>
C275	<p>The comment has been removed as the respondent requested their response not to be published</p>
C277	<p>Whilst the policies protect against the development of bricks and mortar housing, the rural fringes of the Southern Parishes have been overdeveloped with mobile homes which are unsustainable in their locations, construction and running costs: (eg Boarhunt, Durley, Swanmore, Shedfield, Knowle). Businesses have set up that should be sited in industrial/commercial areas: minerals recycling, timber storage and distribution (Shedfield), aggregate storage and distribution (Knowle), retail park (Shedfield). The above also applies to settlement gaps where industrial development and mobile homes have been granted permission (Knowle and Wickham). The Local Plan should allocate sites for these uses and not permit them outside of allocated sites.</p>
C278	<p>The laws regarding the countryside have too many loop holes and can be open to interpretation. This area struggles daily with people misusing the countryside and open spaces by using gaps in inadequate laws. Each situation needs to be looked at carefully to see what the end game is for development on certain sites as the current rules can be used for other than their intended purpose. People lie to get what they want and this should be stopped.</p>
C281	<p>Planners are allowing building on green belt land and therefore not protecting the countryside and other green spaces.</p>
C282	<p>There is lack of commitment to provide green belt and green corridors in the countryside. Planning laws are disregarded by landowners and there is a lack of will to enforce existing laws.</p>
C283	<p>Too often developers seem to pay only lip-service to environmental protection and endeavour to get away with minimum requirements. Local planning policies should be much stricter in this regard and rigorously enforced.</p>
C285	<p>Green belt land is continuously under threat of development. Developers know that if they persist long enough they will eventually get planning permission, so they repeatedly ask for permission. This means that opposing development is a protracted process which costs local authorities and council tax payers a lot of money, to no avail. It also costs the developers, who pass the costs on by increasing the price of housing, making what they build even more unaffordable to local families. it seems that housing development will occur, even when it is strongly opposed by a large majority of local people, and regardless of disastrous effects on the infrastructure which is already under strain. We need to reinforce the system so that the wishes of local people are heard and acted upon.</p>

C286	Recent experience of planning decisions gives evidence that these are inadequate. Too many new homes are being permitted on plots that are too small eg in Oliver's Battery, Hursley and Compton, with the consequence that houses are being built that are too small for family life. More local green spaces are needed and should be factored into plans.
C287	It seems that with the Royaldown proposal you are not protecting the countryside. The very idea of developing all of that land appalls me and most people I talk to.
C288	The comment has been removed as the respondent requested their response not to be published
C290	The local plan provides for an excessive number of housing which will do nothing to protect our countryside which is diminishing rapidly.
C291	<p>For 1a above - Strongly disagree:  The key here is that biodiversity net gain cannot be provided on-site. Who determines whether it cannot be provided on-site? It cannot be developers who systematically avoid providing required and agreed affordable housing and facilities after development is underway. If biodiversity net gain cannot be provided on-site, the development is not suitable for the site and should not receive planning permission.</p> <p>For 1b above: - Strongly disagree  For developments where it really is impossible to put in biodiversity net gain on-site, then it would be useful to have a well thought out area local to the development which will deliver the maximum gain.  However, if land is specifically allocated for off-site mitigation, it will be difficult to resist developers insisting that biodiversity net gain cannot be provided on-site, as WCC have already conceded the principle and it is only about the quantity.</p> <p>For 2 above: - Strongly disagree  To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult.  Option 2 in Homes for All states "The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town", namely in Compton, Oliver's Battery and Hursley Parishes.  The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver's Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a "large allocation" as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.  More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist</p>

	<p>inappropriate development in the countryside. Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes. A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C292	<p>As there is no monitoring of the effects of policies, answering this question is difficult.</p> <p>Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not even prevent a small development such as Texas in Oliver’s Battery (17/02190/FUL), and therefore won’t prevent larger development, such as in Option 2 or Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so Winchester City Council and planning appeal inspectors have a strong basis to resist inappropriate development.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C293	<p>Strongly agree - the current approach under MTRA4 has been successful in protecting the district’s countryside, while enabling planned growth to meet development requirements.</p>
C294	<p>Development management policies are very unimaginative, they lack expert input from knowledgeable wildlife organisations and individuals and frequently deliver poor results.</p> <p>New policy measure needs adopting immediately as new housing developments race on. Builders need to be required to incorporate one swift brick for every house built. In just over the last 20 years 100,000 pairs of swifts have been lost. This massive decline is significantly linked to loss of nesting places through fascia replacement and roof and wall renovations. This decline needs to be halted</p>

	<p>now. At an average cost of £50 for a Swift brick it can hardly be claimed to be too expensive.</p>
C295	<p>In my local area WCC have allowed retrospective building of unsuitable construction in the countryside, it appears there is one rule for local citizens with integrity who follow the local planning guidelines and another for minority groups who build first and ask permission later. Countryside management and development must have a consistent approach.</p>
C296	<p>Economics always tends to trump protection of the countryside. The evidence is all around, just look at the decline in wildlife, bee population etc etc. Protection of the countryside should be fundamental to any decisions made.</p>
C298	<p>The comment has been removed as the respondent requested their response not to be published</p>
C300	<p>Planning approval is being granted in rural areas against the wishes of the local people.</p>
C301	<p>We have a duty of care to retain our wildlife, flora and fauna with special consideration for protected trees, ancient woodland and hedgerows. Wildlife is struggling to survive.</p> <p>There has to be more consultation at pre-planning consultation which should include the public and related organisations/ groups such as the Hampshire Wildlife Trust.</p>
C304	<p>Local green spaces need to be protected to maintain a Green Belt between built up areas</p> <p>Why is there not a strong policy included in local ( and national )plans to maintain and protect land for food production .? This would assist us with sustainability .</p> <p>We should have learnt from Brexit and Covid 19 that these are important issues.</p>
C305	<p>Too many landowners have learnt that they can ignore Planning rules and use land for industrial and storage purposes, or even for residences. The lack of effective enforcement means that violations can persist so long that a LDC becomes available.</p> <p>A common "crop" in rural areas is the dwelling. You grow one by moving in livestock, then installing a mobile home so you can "look after the livestock". Then you apply for a house. Next you sell the livestock and change the use. I can point to four examples in Curdrige within half a mile of my house.</p>
C306	<p>Local Gap policies are not effective.</p>

C308	Development just seems to be consuming green space and leaving brown field sites undeveloped - Its the easy option.
C310	There have been too many large housing developments allowed, such as Barton Farm in Winchester, Bishops Waltham, Hedge End and possibly South Winchester from Pitt to Hursley. Developments of this size are completely overwhelming, change the character of an area and involve the loss of beautiful countryside and wildlife habitats. Smaller developments with in filling where possible and use of brownfield sites such as Bushfield Camp would be preferable.
C313	Insufficient protection of green space is given. New developments such as Winchester Village and Barton Farm have been built on green space, which permanently destroys countryside and leads to further developments on countryside land.
C314	<p>Who determines whether biodiversity cannot be provided on-site? It cannot be developers who systematically avoid providing required and agreed affordable housing and facilities after development is underway. Almost by definition, the use of offsets makes the biodiversity issue someone else's problem. The developer reaps the financial reward of the development, the WCC (&amp; thus the local council tax payer) ends up funding the offset work.</p> <p>The use of offsets has to be founded on proven scientific knowledge and evidence. Knowledge in certain areas is still lacking, and whereas the environmental impacts of development are often immediately apparent, the impacts of offsets may take significant time to become clear. The use of offsets is therefore not suitable.</p> <p>Thus use of offsets to mitigate the impact of new development does not, in my opinion, guarantee biodiversity net gain or indeed guarantee that there will not be a net loss.</p> <p>These risks should factor heavily into the consideration of significant proposed new developments such as RoyalDown.</p>
C316	Seems to depend on who is in power politically rather than the benefits or otherwise of the current housing policy, which seems to be to allow develops to do whatever they want as long as they produce houses - eventually. Of course develops don't develop land for housing until they're sure of getting a good return, so land which could be used to benefit society is left abandoned and fenced off and doesn't do anyone any good. I think the current developments show that WCC and HCC don't really care about either the environment or the villages and retaining the villages character.
C318	You are facilitating the building over the Hampshire countryside. First to the north of Winchester. Now proposals are to fill the countryside gap between Winchester and Hursley. You should adopt a policy of stating no

	development on green land over a certain development size. These large developments in Winchester and surrounding council areas like Eastleigh need to be stopped.
C319	Green belts are needed to protect the countryside
C321	<ul style="list-style-type: none"> <li>- Putting a few plants in the ground is not enough. Read 'Wilding' by Isabella Tree or 'The Garden Jungle' by Dave Goulson to get an idea of how far we need development policies to go in order to get anywhere close to what we should be doing in terms of acquiring a biodiversity net gain.</li> <li>- Minimum numbers of different species of plants should be planted.</li> <li>- Peat compost prohibited</li> <li>- Little mini biodiversity hubs should be set up throughout a whole development.</li> <li>- Fruit trees could be grown everywhere so that people benefit but also wildlife</li> <li>- Only UK-specific plants planted.</li> <li>- Lots of species-specific criteria such as hedgehog holes in fencing between houses or bird boxes up every tree.</li> </ul>
C325	A GREEN BELT OFFERS THE BEST SOLUTION
C326	<p>Existing planning policies are questionable... eg allowing the development on Texas Drive, Oliver's Battery which is a blot on the landscape.</p> <p>Local and perspective green spaces need to be identified and protected.</p> <p>The local plan must provide a real gap between settlements/streets thus providing landscape character, local distinctiveness, woodland and public park space for recreation.</p>
C327	<p>Currently developers often seek to avoid providing agreed affordable housing when development is underway. It is anticipated that there would be a similar reluctance to provide biodiversity on site especially if land is specifically allocated for off-site mitigation.</p> <p>There have been instances locally in recent times where the current policies have not prevented development in the countryside and within the settlement gap.</p>
C329	<p>Countryside is a generic term and the Local Plan uses an assessment process that does not realistically represent it's local value. For example a well-used historic public footpath through open countryside may not be across the 'prettiest' fields or green spaces - particularly because they've already been eroded by development (!) but is a valuable 'green' amenity. Not sure this value/amenity value is sufficiently recognised and off-site mitigation is impossible if an existing open public footpath is destroyed by development.</p>

C331	<p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.</p>
C333	<p>The planning authority has allowed a number of applications in breach of Policy CP18. It needs to uphold local planning policies if the system - including the formulation of the new Local Plan - is to have any integrity.</p>
C334	<p>1. Key areas of green space which separate historic towns and villages from suburban development within and outside the Winchester boundary should be protected by being designated Local Green Spaces. It seems that the NPPF now uses this definition in lieu of the term "Settlement Gap" which was used in the 2013 Winchester District Plan. It is even more important now that areas designated as Settlement Gaps in 2013 remain protected from development</p> <p>2. Far too much development on greenfield sites. There should be a realignment of policy towards brownfield/re-use.</p>
C335	<p>Building in the countryside should be a last resort</p>
C336	<p>Please refer to CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021. Identify all NPPF Valued Landscape within the District (outside the national park). Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021.</p>
C337	<p>increased protection needed for areas of great visual and landscape value</p>
C338	<p>The existing policies are clearly not effective in protecting the countryside. If they were effective, there would be no way a proposal such as Royaldown would be put forward for consideration. However, if there were a Green Belt in place this would provide the necessary protection of the countryside around Winchester.</p>
C339	<p>Current development management policies for the protection of countryside are clearly neither adequate or effective, as exemplified by existing development at Barton Farm and proposed large scale developments to the south of Winchester. In particular, I feel strongly that the beautiful countryside around and between the settlements of Oliver's Battery, Hursley and Compton should be protected.</p>
C342	<p>There is too much emphasis on greenfield sites for development and many "countryside" sites are being lost. There should be much more use of "brownfield" sites and the meaning of "brownfield" should be defined to include any site that has previously been developed in any way.</p>

C343	<p>Negative carbon emissions in Winchester District do not equal carbon emissions, and much needs to be done before the negative emissions go anywhere near counterbalancing the emissions. We need:</p> <ul style="list-style-type: none"> <li>• A rapid increase in rewilding, ponds and bogs, and wildlife corridors</li> <li>• A rapid increase in zero-carbon energy production to balance energy use</li> <li>• Major reductions in farming emissions, and reductions in emissions from farm animals</li> <li>• Widespread introduction of negative-carbon farming methods such as ‘no dig’ growing and fruiting trees</li> <li>• Reduction in farm-based pollution and toxic run-off.</li> </ul>
C344	The comment has been removed as the respondent requested their response not to be published
C346	Too much green field development is permitted instead of a) encouraging brownfield and infill development, and b) development management policies are micro not macro planned and should take account of the population issues and council objectives such as questioning whether encouraging students and the attendant student housing is appropriate for Winchester city, and questioning whether large developments of houses, rather than more space-efficient developments of flats within large communal gardens, is more appropriate. .
C347	<p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver’s Battery is unlikely to prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All</p>
C348	<p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies has not prevent even a small developments such as on Texas Drive in Oliver’s Battery is unlikely to prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All</p>
C350	protecting hedgerows
C351	South Winchester needs a Green Belt, as may North Winchester, to protect it from those Building companies which wish to bypass the Local Plan and force their own plans on the Local Authority and the local community.
C352	<p>Q1.</p> <p>However, in doing so we should be extremely careful to ensure that this does not take away or undermine the incentive for developers to provide on-site. Also allocation should not be reliant on off-site mitigation from new</p>

	<p>development, but be a separate provision. New development can be self-sufficient with the use of brownfield sites.</p> <p>Q2. However, some policies need tightening: e.g. agricultural barns in the countryside should undergo the same planning process as required for dwellings.</p>
C353	I strongly support the proposal that planning should include the identification of important local green spaces for communities, as an equal priority to land for buildings and employment
C355	Climate change is happening stop sacrificing nature and work in a more codependent way
C358	The existing policies are not effective in protecting the countryside
C361	<p>To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Planning policies should contribute to and enhance the natural environment by protecting and enhancing valued landscapes and recognise the intrinsic character and beauty of the countryside.</p> <p>The countryside around Winchester plays an important role in shaping its unique setting and the villages around it are part of this setting. The new Local Plan provides an opportunity to recognise this and provide protection against inappropriate development, which would lead to the coalescence. The new Local Plan should therefore include policies which identify and protect Local Green Spaces and designate Valued Landscapes.</p> <p>The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection.</p>
C363	Developers seem to be threatening to build anywhere, and the countryside in this beautiful area is so vulnerable, as are the characterful villages. A large house was erected about 2 years ago in Texas Drive , and current development policies did not stop it. So how could anyone trust these policy measures to prevent larger developments which would destroy wildlife, ride roughshod over the historical aspect of the area, and destroy its

	<p>character? South Winchester needs to be re-categorised as Green Belt and offered the highest protection possible.</p>
C364	<p>Based on the current development proposals in the area and protection of green sites across the country.</p> <p>Many people live in the area because of the countryside</p>
C365	<p>Carbon neutrality in the district will be achieved only if biodiversity and the natural habitat receive a massive boost, BEIS data for 2018 shows that negative emissions from land use were only 6% of the positive CO2 emissions in the district. Much needs to be done to make these an effective counterbalance to the CO2 emissions across the district. We should be looking at a tripling or quadrupling of the ability of the natural habitat to absorb CO2. This could be done through a rapid increase in:</p> <ul style="list-style-type: none"> <li>rewilding, ponds, and bogs</li> <li>zero-carbon energy production</li> <li>better farming practices to increase carbon retention and reduce pollution</li> <li>a reduction in farm animals, especially cattle.</li> <li>reduction of hard surfaces that increase run-off</li> </ul>
C372	<p>To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes.</p> <p>The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options. More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside. Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes. A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C376	<p>Re question 1 above; all development should only be approved if it takes account of local flora &amp; fauna and incorporates it into any development, therefore not as much off-site mitigation would be required.</p>

	There have been many brownfield sites identified by CPRE that are not being considered for development before greenfield sites
C377	I feel that Winchester as an historic city should have a surrounding greenbelt to stop it merging with Southampton and it's suburbs and to protect the countryside for people and nature.
C379	Disagree if large scale housing is approved for green fields sights such as proposed for Micheldever.
C382	They are not adequate e.g. Texas Drive, Oliver's Battery.  I am firmly against any new large developments on green field sites and do not believe current regulations prevent large scale developments
C385	There does appear to be a tendency to have good policies but then override them if development seems to be more of a priority. I would suggest that policies should be adhered to wherever possible and in the rare occasion that an area of green space, especially that of a sensitive nature is needed that efforts should be made to ensure that something similar is developed elsewhere, ideally nearby and following the advice of ecologists, not just economists
C386	Strongly disagree Whilst the policies protect against the development of bricks and mortar housing, the rural fringes of the Southern Parishes have been overdeveloped with mobile homes which are unsustainable in their locations, construction and running costs: (eg Boarhunt, Durley, Swanmore, Shedfield, Knowle). Businesses have set up that should be sited in industrial/commercial areas: minerals recycling (Shedfield), aggregate storage and distribution (Knowle), vehicle storage, retail park (Shedfield). The above also applies to settlement gaps where industrial development and mobile homes have been granted permission (Knowle and Wickham). The Local Plan should allocate sites for these uses and not permit them outside of allocated sites.
<b>C387</b>	The comment has been removed as the respondent requested their response not to be published
C388	I don't know enough about current policies, but can only judge on what I see - eg large scale developments (eg Barton Farm) or proposals (eg Royal Down) in rural areas on the edge of built-up areas. Current policies do not give enough protection to areas eg south Winchester, which needs to be designated as Green Belt land to protect the settlement gaps between Oliver's Battery, Compton and Hursley.  I do not oppose all developments, if they are well designed and to scale, eg Winchester Village is I think an attractive addition to much-needed housing stock.

C390	Countryside needs protecting from building to preserve flood plains as a water and carbon sink and to provide accessible leisure spaces. New infrastructure roads and housing should take account of local opinion, traditional land and path use.
C391	As previously mentioned, green belt areas need to be established and adhered to
C392	Local green spaces are critical to our health and well being. They need to identified and protected. There need to remain proper gaps between settlements The current gap policies have failed to prevent even small development and would not work to prevent large development. We need a greenbelt
C393	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C394	The current policies are demonstrably inadequate as they have led to wholesale development of areas such as Barton Farm and provision for destruction of even larger areas by future development such as that between Pitt and Hursley.
C395	There is a lot of beautiful countryside which is not in the South downs National park which inevitably will be build on as green field site and the biodiversity there is just as important as the biodiversity in the National park, including Bats, badgers, deer, owls and birds of prey.
C397	Given that there are threats Royaldown and building on South Winchester Golf Course I have to disagree that the countryside is being protected.
C398	recent developments do not appear to have any regard to biodiversity or the negative impact that they have on the local area / local residents (animal, vegetable, insect, human etc!!) Many of the requirements outlined in local developers plans seem to have fallen by the way side once development has started - with the developers arguing that they are unaffordable - but effectively reneging on meaningful commitments which were assuming to be binding.
C399	To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states "The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town", namely in Compton, Oliver's Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver's Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a "large allocation" as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.

	<p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C401	<p>A Green Belt offers the highest level of protection. Once our green space is developed it is gone forever which will impact negatively on the environment. Covid 19 has demonstrated how important our green space is.</p>
C402	<p>A green belt offers the highest level of protection once our green space is developed it is gone forever which will impact negatively on the environment.</p> <p>Covid 19 has demonstrated how important our green space is.</p>
C403	<p>A green belt SW of Winchester is needed urgently</p>
C404	<p>more robust measures are required so that wcc and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside. despite policies on the settlement gap developments have still taken place to the south of winchester. Local greenspaces need to be identified and protected recognising the importance of green spaces, landscapes, character and valued landscapes. A green belt offers the highest level of protection we need a green belt in south hampshire.</p>
C406	<p>How could royal town even be proposed in such a wildlife biodiverse area</p>
C407	<p>Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes.</p> <p>The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>

C408	The current development policies are inadequate. There are examples of inappropriate developments within Olivers Battery and the green space surrounding it. These spaces need to be protected and this is best done by conferring the surrounding area as Green Belt.
C409	It is really important to protect our green spaces, surrounding countryside & natural habitat from developers. The Royaldown proposals for 5,000 houses building over downland south of Winchester will destroy valuable green field space and change the character of Winchester & the village life of surrounding villages for ever. Brownfield sites need to be used first, the revelopment of the city centre needs to take into account changes in retail & a robust Green Belt needs to be in place to stop a land grab by developers. In lockdown we have come to value open, green spaces and community more than ever. It's been heartening to see so many people enjoying the local countryside & reconnecting with nature. Once land is built over, it is lost for ever.
C412	The comment has been removed as the respondent requested their response not to be published
C416	The first thing people do when they move into this area is to get out the chain saw and no new trees are planted.
C417	The existing policies are not effective in protecting the countryside
C418	Biodiversity schemes often do not reach their targets
C420	The existing policies are not effective in protecting the countryside.
C421	Option 2 in Homes for All states "The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town", namely in Compton, Oliver's Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver's Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a "large allocation" as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options. More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside. Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.
C424	A two mile perimeter around built areas and villages should be enforced for Biodiversity that includes aesthetics and recreation
C425	I am very unhappy that proposals for new settlements between Winchester and Hursley and Micheldever Station are contemplated. The countryside to the south-west of Oliver's Battery is exceptionally attractive and a new town at Micheldever Station would simply result in the development of another dormitory suburb for London. If there

	were no railway station in the area this settlement would not be proposed. This cannot be good for the authority's overarching aim of achieving carbon neutrality.
C426	Constant pressure from developers on rural and greenfield development needs to be more strongly resisted by WCC. Developers and WCC need to be more imaginative about redeploing brownfield sites or redeveloping brownfield sites. Post covid the 'high street' may need fewer retail spaces and WCC must take this opportunity to create dwellings form these paces instead of using greenfiled sites.
C428	Current development management policies do not prioritise brownfield and previously built on land which would further protect the countryside.  Current policies do not fully recognise the irreplaceability of established habitat once it has been destroyed and therefore the true environmental cost of development on the countryside.
C429	Historic patterns of development, particularly across the southern parishes, have shown that the gaps policy is not of sufficient weight to prevent the erosion of gaps between settlements being eroded over time. A more permanent solution would be a new South Hampshire Green Belt, which has the benefit of longevity and weight in planning policy. A district-wide evaluation and map should be made of valued landscapes which can aid in choosing appropriate development locations as per the criteria in the NPPF and subsequent appeals. And an analysis of the potential for settlement coalescence and how to avoid it should be included as a policy.
C432	One only has to review the recent saga of the development of land at Texas, Texas Drive, Olivers Battery to be provided with ample evidence that current policies are totally inadequate at safeguarding the open countryside surrounding Winchester. What is needed is a Green Belt to the south and west of Winchester to protect against encroachment towards Olivers Battery, Compton and Hursley.
C434	The comment has been removed as the respondent requested their response not to be published
C436	Stop building new roads  Stop building anything.
C437	Too many houses are being put into small spaces which means they have such small gardens which means people create slabs/concrete and other turf alternatives other than grass and plants. This creates flooding and also by removing too many trees to open up a site causes drainage issues and flooding. More garden space should be created so plants, vegetables and other good environmental practices can be put to create a mindful and spaces.

C439	Settlement boundaries are currently working to prevent sprawl and protect the countryside. But some policies need tightening: eg, agricultural barns should undergo the same planning process as required for dwellings.
C441	Property developers have a profit incentive to fit as much housing as possible onto sites. This creates an undesirable density that lacks respect for the environment and, ultimately, constrains the ability of residents to live more sustainably. Standards for environmental protection need to be much higher.
C442	The comment has been removed as the respondent requested their response not to be published
C445	Developers can submit misleading applications and still be accepted without penalty or a voiding of their application. The evidence from the SHELAAS submitted is that that there appears to be very little attention to the detail of any application and no means of voiding and rejecting a misleading submittal. There appears too much reliance on the "believe me". My experience (governments and businesses) when anything like that is presented to me is where are you not telling the full truth.
C448	The comment has been removed as the respondent requested their response not to be published
C452	Barton Farm is a perfect example. What steps have been taken to mitigate the change of land. Why was this site not planted out years ago so that the growth of trees and planting would be visible now. We cannot allow mass development to take place and defend it by planting a few trees down the road to 'mitigate' - we have to be authentic in our commitments not greenwash the general public to suit the greed of developers.
C453	This isn't just a county or city challenge but central government, where agricultural policy is a mess since Brexit (for example allowing neocotinoid pesticides which we know kill bees). On a city or county level, the degree to which developers and private planning applicants are allowed to cut down trees, build new houses in gardens (to make money, such as in Chilbolton Avenue and other infill parts) should be discouraged by planning regulations and buildings control.
C454	The comment has been removed as the respondent requested their response not to be published
C461	Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes. The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocations in Options 2 and 3 of Homes for All.
C462	Stronger policies are needed to protect the landscape setting of Winchester
C463	I do not see any evidence of you desire to protect the countryside.

C464	A developer can come along and seriously propose to build all over a CP18 Settlement Gap - so what is its use? All previous policies recognise the need to maintain gaps between settlements and to protect landscapes that are important for environmental, recreational and/or historic reasons . These objectives must be strengthened and protected – developers should not be able to ignore them even in potential proposals.
C467	The existing policies are not effective in protecting the countryside. A Green Belt offers the highest level of protection.
C469	Productive agricultural land is not being preserved - the UK is a net food importer!!! Land is required for edible and energy generating crops.
C471	I agree with the statement made by SSWCG.  Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes. The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver’s Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.
C475	The housing being undertaken in this area is excessive.
C478	There is constant speculative application for housing on green fields, golf courses and HCC farmland. The #onegreatwin and WCC 2020-2030 Vision consultation states that green areas should be protected and housing should be on brownfield sites identified by local people. There is much unused brownfield space in Winchester: Bushfield Camp, Town Centre redevelopment areas, old Riverpark site, and small plots in the city. Small scale developments are more preferable and do not compromise the culture and ecology of the area. The Vision must be consulted and the Climate Crisis must be at the centre of all decision making. We must be brave and reverse the loss of biodiversity which will mean creating a green belt which will retain local areas and their distinct and recognisable neighbourhoods rather than having urban sprawl.
C481	There is constant speculative application for housing on green fields, golf courses and HCC farmland. The #onegreatwin and WCC 2020-2030 Vision consultation states that green areas should be protected and housing should be on brownfield sites identified by local people. Despite this, speculative development is a constant threat to the character of Winchester and the local neighbourhoods, with a threat to their distinct identities and is unsettling to local residents, who will not benefit from the development.

	The new policy should strongly support protection of green space for people and wildlife.
C484	The comment has been removed as the respondent requested their response not to be published
C487	Green spaces must be identified and protected, retaining gaps between settlements and valued landscapes.
C488	<p>We currently live on the Southern Perimeter of Oliver's Battery, overlooking fields in all directions and with views of the South Downs National Park. If developments like Royaldown proceeded there would be no protection of beautiful countryside between Compton or Hursley. Winchester City would become amalgamated with both Compton and Hursley, which in turn is linked directly to Otterbourne, Chandlers Ford and Eastleigh. A significant chunk of countryside which sits between these settlements would be built on. One big sprawl of urban development. I don't currently see how this countryside is being protected.</p> <p>The Oliver's Battery Recreation Ground is exceptionally popular and at the weekend, many families travel from central Winchester to enjoy the park and the accompanying views and walks in the country. If Royaldown happened the whole aesthetic of the park would change and the enjoyment Winchester residents currently have would be gone.</p> <p>Additionally the fields and footpaths to the South of Oliver's Battery have been used extensively during Covid, and I sense this degree of use will become unchanged as so many have discovered and enjoyed this natural habitat. I have often commented that Texas field and beyond has become as busy as Richmond Park. Royaldown would completely change this and remove all accessible green space to the south of Winchester. People would have to drive to reach an alternative environment to give them the tranquillity, time in nature and views they currently enjoy. This goes against creating an environment where green spaces are accessible by walking or cycling.</p>
C489	The planning policy needs complete overhaul. In one year I have been horrified to the extent of planning requests for large industrial factories (recycling, aggregate, power) etc etc to be built on empty fields when half of for instance Winnall industrial estate and huge warehouse areas around Andover lie empty. BROWNFIELD SITES EVERY TIME. And the only way we find out is by someone happening to come across a plan or through a parish council. The district should be publishing any industrial new requests in public places, ie newspapers, via parish councils, and be very visual in these places.
C490	The comment has been removed as the respondent requested their response not to be published

C492	<p>Nationally and locally biodiversity is in jeopardy because of the idea ecological sites can simply be shifted to a more convenient location for the developer. Some habitats require hundreds of years to establish and cannot be restored to effect net gain in biodiversity. Worse still is the isolation of important sites due to destruction of wildlife corridors. A site may be "saved" from destruction or change of use but still have net loss of biodiversity if links with wildlife corridors are blocked or destroyed. I would like due consideration to be given to migration routes, hedgerows and previously unconsidered corridors that prevent net loss of biodiversity.</p>
C493	<p>WCC and its planning departments need stronger proactive powers to prevent inappropriate development in the countryside. At present the system seems to be developer led.</p>
C494	<p>The existing policies DO NOT &amp; ARE NOT effective in protecting the countryside. A Green Belt would offer the highest level of protection to the countryside</p>
C496	<p>The existing policies are not effective in protecting our beautiful countryside, which is a haven for wildlife and a huge asset for leisure and well-being. Lockdown has shown just how important open spaces are, for the well-being of people of all ages.  A Green Belt offers the maximum level of protection.</p>
C497	<p>A new Green Belt (covering the area south west of Winchester, including Hursley) is needed to permanently protect our already limited natural green space against unsustainable, unacceptable development being proposed. This area of countryside should be viewed as a strategic gap not only to preserve the natural environment and protect biodiversity, but also to prevent the inexorable creep of urban agglomeration which can never be reversed.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of real gaps between settlements, landscape character, local distinctiveness and Valued Landscapes.</p> <p>The current Countryside and Settlement Gap policies did not prevent even a small development on Texas Drive in Oliver's Battery so will not prevent larger development, such as a large/strategic allocation in Options 2 and 3 of Homes for All.</p> <p>Royaldown's unacceptable and unproven marketing promotion of 'sustainable' development is only going to permanently destroy our precious green space and under-deliver on unproven environmental 'marketing'</p>

	promises of biodiversity or green energy. They say their development will remain hidden, but those of us who live nearby will not be spared and will be hugely detrimentally affected. 'They also plan to run a road straight through the area which will which will add noise, pollution and congestion to an area meant to be 'protecting biodiversity'.
C498	Increase Green Belt Lands to the South West and West of Winchester and between Winchester Whitely and Waterlooville. Reduce the allowable size of any development to 100 dwellings maximum.
C501	include more sustainable methods in the development such as rain water harvesting for use within the homes, solar and wind power etc
C503	The comment has been removed as the respondent requested their response not to be published
C507	We have seen too many examples of inappropriate development in the countryside with the loss of habitats - what better example than Barton Farm
C510	Existing policies are not effective and do not protect the countryside. A Green Belt would offer the highest level of protection to the countryside.
C511	Green field development is happening on a wide scale in South Hampshire. Once build on, land is never returned to nature / the wild environment.  Green field land should be the absolute last resort to development.  All Brown Field sites should be used first - including direct action by local councils if needed.
C512	Keep green belt as green belt for wild life etc.
C514	Developers cannot be permitted to push their problems elsewhere. If they cannot provide nature and biodiversity within the bounds of their development, it should not be permitted the first place.
C515	As detailed in the Council's Consultation Document, there are a number of alternative approaches to countryside protection including maintaining existing countryside policies, introducing new landscape designations, defining Strategic/Settlement Gaps, local green space or wedges, local landscape protection policies or designating a Green Belt (as covered below). Welbeck consider that the existing suite of countryside protection policies provide an adequate and robust framework for protecting the District's countryside, while also enabling planned and proportionate growth in sustainable locations to meet development requirements.
C516	Need to have better enforcement of all aspects of countryside protection  The current policy is not adequate and neither is the proposal to allow off-site mitigation. We believe that biodiversity net gain is perfectly possible in the enhanced design of all new development (roof gardens, solar &

	<p>water capture, edible landscaping) and for larger scale developments (as above and allotment provision, community gardens, )</p> <p>Should you be minded to allow developers to offset their responsibilities then the Policy referring to any land allocated as off-site mitigation must include sustainable management for maximum carbon capture and maximum biodiversity and production, accessibility for the public and managed for mixed recreation including:</p> <ul style="list-style-type: none"> <li>Edible landscapes for foraging</li> <li>Green infrastructure such as ponds and bogs</li> <li>Work to clear pollution from rivers and ponds</li> <li>Community growing using 'no dig' growing and fruiting trees</li> <li>Community farms</li> <li>Wildlife corridors with sustainability built in</li> </ul>
C517	I support a green belt to protect our settlement gaps
C521	Tighter development controls are required. The quality of new housing stock is extremely variable. Housing stock constructed in the past 10 years suggests developers have been permitted to over-build housing and not provide adequate infrastructure. This suggests that the taxpayer collects the bill for the vast majority of infrastructure provision, basically underwriting private developers.
<b>C525</b>	The comment has been removed as the respondent requested their response not to be published
C528	<p>Current policies are too inflexible and give no real scope for allowing small scale development that are supported locally and provide new homes to reinforce local communities and to support struggling local services such as shops and schools.</p> <p>Historically, all settlements have grown incrementally over time and this should be recognised by allowing developments which are both well-designed and supported at the local level.</p>
C529	<p>No greenfield site development from now on.</p> <p>Some planning agreements to be reversed without compensation</p>
C532	The current policy is not adequate and neither is the proposal to allow off-site mitigation- everyone deserves to live in an area that is developed to the highest standard - all new development should consider roof gardens, solar & water capture, edible landscaping, and for larger scale developments have the added requirement of allotment provision, community gardens.

	The lower income bracket that the housing development is for, the higher the amount of community space to balance the health inequalities.
C534	The comment has been removed as the respondent requested their response not to be published
C535	<p>The current policy is not adequate and neither is the proposal to allow off-site mitigation. We believe that biodiversity net gain is perfectly possible in the enhanced design of all new development (roof gardens, solar &amp; water capture, edible landscaping) and for larger scale developments (as above and allotment provision, community gardens, )</p> <p>Should you be minded to allow developers to offset their responsibilities then the Policy referring to any land allocated as off-site mitigation must include sustainable management for maximum carbon capture and maximum biodiversity and production, accessibility for the public and management for mixed recreation including:</p> <ul style="list-style-type: none"> <li>Edible landscapes for foraging</li> <li>Green infrastructure such as ponds and bogs</li> <li>Work to clear pollution from rivers and ponds</li> <li>Community growing using 'no dig' growing and fruiting trees</li> <li>Community farms</li> <li>Wildlife corridors with sustainability built in</li> </ul> <p>Policy measures should also include:-</p> <ol style="list-style-type: none"> <li>1. Work with HCC to give advice, training and support to farmers, growers and land managers on how to adapt to agro-ecological production and management techniques.</li> <li>2. Protect and re-establish vital sustainable food infrastructure to support shorter and value based supply chains</li> <li>3. Protect, enhance and make available all grade 1 and 2 urban and peri-urban land for community growing and commercial sustainable agriculture</li> </ol>
C539	From the perspective of a rural resident, WCC look at the world as urban with a little bit of rural tacked on. My perspective is rural with a little bit of urban when needed.

	You cannot make up for poor development in one place by good development practices elsewhere. Good development practice is an absolute.
C542	<p>There are too many greenfield development proposals that should never pass the first stage of planning. Greenfield development should be seen as a last resort, and urban sprawl should be actively discouraged.</p> <p>Local biodiversity should be protected. The area contains many sensitive wetlands which cannot be replicated elsewhere. Offsetting of the sort described here too often becomes a box-ticking exercise where planting a few non-native, fast-growing trees is seen as sufficient. It isn't.</p> <p>Where possible, traditional methods of land management should be respected. For example, moorland burning has fallen out of favour because the fires are seen as "bad" for releasing CO2 into the atmosphere, but cold-season burning prevents vegetative build-up, which, if ignited in a summer wild-fire, releases far more CO2. There is no way to avoid burning, the question is simply whether it is controlled or not. This may not be relevant specifically in the local area, but it is an example of where well-meaning but ill-informed land management policies cause more harm than good. Analogous policies exist in the management of waterways and flood prevention.</p>
C543	We believe that all development should include open spaces and provision of bio-diversity as an integrated living environment. The creation of over-developed areas of housing with little or no provision for the inhabitants to be able to relax and interact with the environment because the developer contributed to a scheme 20 to 30 miles away needs to be avoided. This, in our opinion, just leads to extra travel in order to enjoy the environment, which is not really the aim.
C548	The NPPF requires policies that contribute to and enhance the natural and local environment and enhancing valued landscapes. I feel that the landscape to the south and west of Winchester falls into this category and supports the conclusions in CPRE Hampshire's report of 9 March 2021 entitled 'West, South West and South East of Olivers Battery Winchester' that this has attributes that satisfy the characteristics of a valued landscape. The City Council should accept the reports' conclusions and also consider what other areas of countryside can be classified as valued.
C549	Change of use rules for agricultural land need to be stricter, i.e. more narrowly defined. As a nation we need to be more self-sufficient when putting food on our tables. Encourage sustainable farming, not the industrialisation of agricultural land. Industrialisation includes energy generation.

C554	And this is based on the current Local Plan being strong enough to rebuff speculative planning applications such as the 'Gladman' proposal in Otterbourne.
C555	You cannot protect countryside or biodiversity by building on it.
C556	Too many open spaces in and around Winchester are being used for new housing
C559	We note that page 27 of the plan provides a 'Call for Green Sites'. We like this idea, and feel it is a good opportunity to enhance current management and protection policies.
C560	There is creeping encroachment of green spaces
C561	We already have too much development in small villages and communities. The character of the countryside is changing and will be lost forever. Villages merge into each other. More needs to be done.
C562	More robust measures are required, so that local green spaces can be protected.  A Green Belt offers the highest level of protection. WCC should follow the lead of Test Valley BC and support a Green Belt to the SW of Winchester Town.
C564	The comment has been removed as the respondent requested their response not to be published
C567	To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states "The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town", namely in Compton, Oliver's Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver's Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a "large allocation" as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options. More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside. Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes. A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.
C568	To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states "The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town", namely in Compton, Oliver's Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for

	<p>example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C569	<p>To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes.</p> <p>The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C573	<p>It seems that various development have occurred on previous green sites (Barton Farm, Winchester Village etc) without due care for the green space. There are many areas of Winchester within the city centre or at Bushfield camp for instance, that could be developed on places previously used for building. I feel that current policies do not do enough to protect the countryside and favour cheaper development options to maximise profit.</p> <p>Areas between villages ie Littleton, Sparsholt, Hursley should ensure green space between and not just be 'swallowed up' into a bigger Winchester City conurbation. Chalk Down, woodland and grassy space is vital for everyone and everything, It allows areas to 'breathe'.</p>

C574	<p>Some of the people running the environmental schemes are not sufficiently knowledgeable, or have limited interests. Cutting down wonderful oak trees to allow scrub to flourish to help some insects cannot make sense. Not enough has been done in the past to prevent pollution of the Itchen - see the Countryfile programme.</p>
C577	<p>To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes. The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options. More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside. Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes. A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>
C579	<p>From all that I have read and heard about proposed changes there seems to be very little prioritisation for protecting the countryside</p>
C580	<p>Biodiversity and the natural environment          The concept of Biodiversity net gain is a developing one and clearly the local plan needs to embrace it. However there is likely to be a conflict between Biodiversity net gain delivered on site and the carbon neutrality overarching objective, that will need resolution.          Whilst the preservation of current levels of biodiversity on development sites (particularly greenfield sites) will be challenging enough, the requirement for a 10% increase in biodiversity would more or less inevitably lead to development at lower density in combination with a maximising of biodiversity within the development. This would be in conflict with the need to encourage the development of walkable transport nodes and the concentration of new homes around existing or proposed public transport hubs which will be essential to meet the carbon neutral aspiration. To maximise the effectiveness of planning around public transport and the ‘fifteen-minute city’ will require, broadly speaking, a higher development density.          Whilst there will always be a priority to achieve the maximum amount of biodiversity on site, we suggest the plan needs to consider whether the carbon neutral target increases the potential need for the biodiversity net gain to</p>

be delivered not just on site, but also across the rural areas of the district.

The same also applies to nitrate neutrality.

Agricultural land is very much a finite resource and if it is to support new development in this way, it will be necessary to positively plan for the greening/re-wilding of the district's rural landscapes, including planning for wildlife corridors etc. to maximise the positive effects of Biodiversity net gain and measures to achieve nitrate neutrality, while maintaining agricultural production.

This will contribute to the duality mentioned earlier, of historic city and towns and villages set in a landscape of real quality, in turn delivering objectives to promote tourism and the attractiveness of the district as a place to live, work and play in. In short, a combination of cultural and natural capital.

While we cannot pretend to offer an answer, it is worth flagging up the challenges in this situation.

- Biodiversity net gain will presumably be achieved not just by taking land out of agricultural production for wildlife corridors etc, but also by changing the way farming is done eg by using less inputs and pesticides. There will be a challenge to the planning system to regulate the management of our landscape over an 80 year period (or longer).

- The impact of new development on agricultural land will be thrown into sharper relief by the higher development densities called for to meet carbon neutrality targets.

- Farm incomes are already set to be transformed by the change from EU single farm payment (per hectare) to DEFRA funding of sustainable land management. How the twin incentives to improve biodiversity (from DEFRA funding and payments to support Biodiversity net gain/nitrate neutrality) are to be reconciled, without double subsidy, is beyond the scope of our response.

We support the further consideration of a green belt within the southern parishes to retain the distinctiveness between settlements and the CPRE's Case for a South Hampshire Green belt which sets out the arguments in a clear and cogent way. The green belt would be an ideal location to for the biodiversity/nitrate neutrality measures touched on above, where they would be of maximum benefit to the adjacent communities for recreation, where this was compatible with biodiversity enhancement.

It is encouraging to hear the updating of the Landscape Character Assessment. We regret the passing of the former designation of areas of special landscape quality, and would hope that the areas formerly covered by this designation will be recognised as valued landscapes under the NPPF.

We disagree with the statement that current DM policies for the protection of the countryside are adequate and can point to several instances within our own Parish where they have provided woefully inadequate to resist the encroachment of development of all kinds and the gradual erosion of landscape quality.

	<p>The remedies would be both the introduction of a green belt designation and the identification of valued landscape and its proactive use as a criterion in assessment of development proposals.</p> <p>It will also be critically important to ensure that a greater resource is put in to enforcement. Nothing is more dispiriting to those trying to preserve the character of our quiet rural lanes than to see landowners who are frequently not residents, getting away with flagrant breaches of policy and too little being done, too late, to enforce against this. Most Parish Councils will be able to quote instances of residents objecting to breaches and then saying, in effect, 'oh, if they can do it, then I will'.</p>
C584	The Policies are weak and the planning authorities regularly ignore them. Local opinion is nearly always ignored.
C585	<p>Our urban bird species (Swifts, Starlings and House Sparrows) have declined catastrophically during the last 20-25 years. During this time we have already lost 58% of the Swift population in the last 23 years (BTO). The cause is loss of nesting sites caused by a) the use of plastic fascias and soffits to replace timber which needs maintenance and b) the fact that virtually all new homes built in the last 25 years will never ever have nesting opportunities for these three species due to changes in building practices to reduce carbon emissions. We must ensure that all new homes built have a universal bird brick (Swift brick) included at a rate of one per dwelling as recommended by the RIBA. This will start to turn the tide of the catastrophic losses of the last 25 years.</p>
C586	Older farm buildings in the countryside should be used for employment- the principle of building employment there might create a lot of people travelling to work to a rural area. This doesn't make sense.
<b>C587</b>	The comment has been removed as the respondent requested their response not to be published
C588	<p>The protection of the natural environment is a key part of the delivery of sustainable development. The new Local Plan should make best use of existing planning tools to ensure that any impact of any change that is necessary is minimised. However, the current Local Plan policies pre-date the NPPF 2019; countryside and settlement gap policies have not always prevented damaging development taking place.</p> <p>The policies should be reviewed to take account of the advice in the NPPF 2019 and relevant case law.</p> <p>The countryside around Winchester plays a vital role in shaping its unique setting and the villages around it are part of this setting. The new Local Plan provides an opportunity to recognise this and provide protection against inappropriate development, which would lead to the coalescence of Winchester Town with the surrounding villages.</p> <p>The new Local Plan should therefore include policies which identify and protect Local Green Spaces and</p>

	<p>designate Valued Landscapes.</p> <p>The importance and retention of real gaps between settlements (not just token strips of woodland such as proposed by Royaldown) should also be recognised with policies which identify and protect them. A Green Belt to cover land south west of Winchester would help cement this goal. It would protect the rural parishes and the shape and setting of Winchester itself and it could form part of a wider objective of promoting greater biodiversity. It would also complement the delivery of sustainable development by focusing development on PDL, including the Town Centre, maximising the use of existing infrastructure and would stop urban sprawl and the merging of settlements.</p>
C589	<p>We have lived on the edge of Waltham Chase since 1982 and have seen erosion of the Swanmore local gap as inexorable and currently the actual gap is almost non demonstrable and the local gap and countryside policies are inadequate and such as they are we have seen them 'trumped' by the Exception Site device! Principles must be upheld to prevent cynicism!</p>
C591	<p>Developments should not encroach upon areas supporting a diverse range of flora and fauna. Designated "buffer zones" should be mandated around all developments near to woods, nature reserves, SSIs etc to ensure that domestic animals (cats) do not cause devastation to small mammals and birds, and to ensure the wild-life is not threatened by an adjacent urban fringe.</p> <p>New housing developments on greenfield sites could, with good design, actually INCREASE the biodiversity. Monoculture fields can be transformed to have a wide diversity of natural habitats provided by private gardens. However, it is ESSENTIAL that allowance is made for the safe passage of small mammals and amphibians between gardens. Designs and layouts must provide corridors for wildlife. Frogs and newts must be able to traverse between gardens to explore ponds; hedgehogs must not be hindered in their search for garden pests in their diet. There should be no enclosed garden walls or concrete gravel board fences. Gardens must be bounded either by hedges or their fences must have gaps. There is a reason for hedgehogs not being called garden-wall-hogs. Good housing development can be highly beneficial to natural wildlife.</p>
C595	<p>The comment has been removed as the respondent requested their response not to be published</p>
C596	<p>Past practice and developments led by the council have not protected the countryside around Winchester eg Barton Farm. Establishment of a Green Belt would be a more effective policy as neighboring authorities eg Test Valley have done.</p>
C597	<p>Please see representations made to Planning Policy, submitted in PDF form.</p>

C598	<p>The fact that there are proposals to build upon green fields around Micheldever indicates that current development management policies are not sufficient. The proposals would rid the local area of significant biodiversity and the only clear night skies between London and the south coast.</p> <p>New policy measures should weigh up the benefits of retaining fields for sustainable agricultural practices vs housing development</p>
C603	<p>To comment on the effectiveness of existing policies in the absence of any monitoring reports is difficult. Option 2 in Homes for All states “The SHELAA shows that there are concentrations of potential sites ... to the south-west of the town”, namely in Compton, Oliver’s Battery and Hursley Parishes.</p> <p>The Countryside policy MTRA4 and Settlement Gap policy (CP18) did not prevent even a small development for example Texas, Texas Drive, Oliver’s Battery Winchester SO22 4HT (17/02190/FUL), and consequently will not prevent larger development, for example a “large allocation” as in Option 2 or a strategic allocation as in Option 3, if WCC include these sites in their Strategic Options.</p> <p>More robust measures are required, so that WCC and planning appeal inspectors have a strong basis to resist inappropriate development in the countryside.</p> <p>Local Green Spaces need to be identified and protected, recognising the importance of settlement gaps, landscape character, local distinctiveness and Valued Landscapes.</p> <p>A Green Belt offers the highest level of protection and Test Valley BC now also support a Green Belt in South Hampshire.</p>

**3: Do you think a new Green Belt is needed in the south or north of the district?**

**Do you think a new Green Belt is needed in the south or north of the district?**

**If so, what changes in circumstances make this ‘exceptional measure’ necessary:**

<b>Respondent Number</b>	<b>Respondent Comment</b>
C3	There is a clear case for an AONB/green belt designation that links the North Wessex Downs AONB and the South Downs National Park. This is in tune with landscape-scale conservation practice, and would provide uninterrupted green belt protection running from Bedfordshire in the north, Wiltshire in the west, down to the South coast all the way to Brighton. Not protecting the area to the north of Winchester is a glaring error in biodiversity terms and should be considered as a biodiversity priority.
C5	Protection of the settlements from the scourge of planning blight. If landowners know they will not be able to have development on their farmland, they are more likely to allow recreational use and to sell the land at reasonable prices.
C6	Greedy developers continue to try to obtain permission to develop outside existing settlements
C9	Climate crisis
C11	Connectivity of natural habitats and ecosystems are diminishing in the area. A new Green Belt would help to prevent this, would reduce the pressure on many threatened species and generally help to ease the nature crisis.
C17	Urban creep destroying village integrity by eliminating traditional "gaps"
C19	Plans such as Royaldown between Hursley and Oliver's Battery do the very opposite of protecting our countryside. We should respect and protect greenbelt
C22	To provide countryside areas where building is not allowed, especially if green issues cannot be addressed in the town
C23	No specific circumstances have been advanced to make the case for a Green Belt, despite calls for one to be established. Green belts risk pushing development further from established urban areas, acting against the Council's stated objectives for sustainable locations for development.
C25	The threat of Royaldown. Government housing figures for the south East. The growth of Southampton and Portsmouth northwards.
C27	Development of the M27 corridor - the breach has been made with Whiteley and Welborne. This where the green belt should be: it is not too late to do what can be done...
C28	Density of current and future housing
<b>C31</b>	The comment has been removed as the respondent requested their response not to be published
C32	Post COVID-19 we need more green space.

C33	We cannot afford Winchester and Basingstoke join up as this will have huge detriment to both the environment and our goal to be carbon neutral/prevent global warming. These green spaces are our equivalent to the Amazon rain forest and more needs to be done to use them as such. It needs to be our/Hampshire commitment to the Glasgow Climate change conference 2021.
C36	The National Park serves this purpose plus many nature & historic designations at parish level
C40	Why do you think this is an "exceptional measure"? Again, you presume our stance. It is totally necessary, first of all because you ask the question in the way you have. The defence against all your weasel words is a blunt "no development" zone that has served this country so well for 70 years. Just go to France, USA etc and look at their suburban sprawl.
C42	See above. There will only be a 50m gap between Welborne and Wickham so the likelihood of Wickham and the settlements above being absorbed into Fareham is great through urban sprawl. Furthermore, WCC have allowed Welborne to use Dashwood as a recreational area for Welborne so making the encroachment even closer. These southern market towns are being put under pressure for housing development and ever increasing volume, noise and pollution from through traffic heading between M3 and M27, and going to Portsmouth & Southampton ferry ports. (which will increase with the upgrade of junction 10 on M27). These comments are reflected in the Wickham updated Parish Plan, summer 2019 - a copy of which is with WCC. Their growth is also limited to the north and east by the constraints of development in the National Park, and they badly need more protection. In your District Plan preamble you state that market towns in rural areas should, 'be allowed to respond to local needs whilst retaining their individual identity and rural character' - the latter is fast disappearing in Wickham and nearby villages. Greater protection is badly and urgently needed in the south of the District.
C48	Powerful lobbies must be kept bay and the countryside belts around Winchester must be strongly defended. Nice area to live in. People can spend there money in a nice environment.
C50	The area that I live is suffering from the building of new homes that are encroaching on green space. The only way of protecting the countryside & green space in our area is for it to be designated Green Belt.
C57	Please see above. It is difficult to see how the emphasis on accessibility to green space chimes with its building-over by developers. Brexit and Covid-19 have highlighted the importance of preserving such cultivable land as we have left for future generations.
C58	Existing green belt should be respected. We need more housing. Some of this will impact the green belt. The challenge is to develop while at the same time enhancing not degrading the natural environment. Designating more green belt will result in fewer opportunities and more nimbysism.

C59	To stop the incursion and spread of Basingstoke which seems to be spiralling out of control ever closer to Winchester district in the north.
C61	Yes between the big cities. Otherwise they will all merge.
C63	The ever increasing pressure for development. Also, the recent new development which has added to to pressure on the infrastructure, particularly roads, and would make further pressure more harmful to the amenity of the city and of residents.
C65	The comment has been removed as the respondent requested their response not to be published
C66	To avoid the danger of inappropriate development which could be to the detriment of the local area.
C70	We need to avoid Southampton merging into Winchester and Winchester into Basingstoke. The countryside which separates these towns is continuously under attack and needs to be safeguarded
C72	The comment has been removed as the respondent requested their response not to be published
C75	Ever expanding Winchester boundary, with developers pushing for more, that just elongates the current shape of the city along major trunk roads.
C76	Urban sprawl must be avoided at all costs. Winchester is already looking a bit like a doughnut, sorting out Silver Hill and Station Approach, both remain undeveloped and underutilised while we spread out into the countryside.
C78	There are lots of developments in discussion around the north of the city, especially closer to Basingstoke and these along with Winchester plans could lead to a sprawling conurbation if not carefully managed with the right amount of green space that makes Hampshire the garden county it is known for being.
C79	The level of pressure placed on local councils to build new homes is placing our countryside under threat. It is cheaper and easier for developers to build on green field sites than on brown field and /or contaminated land. A green belt would protect such valuable greenfield sites. I feel it is needed in both areas to maintain a green gap between Basingstoke, Eastleigh and Southampton. Of course the size of the green belt is an issue with 40% of the district a National Park the creation of large green belts would limit even further sites available for development. It is a difficult balancing act.
C81	We are surrounded by major developments on the outskirts of Basingstoke, Andover, Southampton and Winchester but we must take steps to avoid these conurbations becoming one combined built up area. We must ensure that there is sufficient green belt land around each separate area to ensure that this cannot and will not happen.
C82	The comment has been removed as the respondent requested their response not to be published
C84	It is already necessary but further out than the current built area

C87	Key is to preserve existing green, open space and not to invite unwanted development. Protect existing green spaces.
C88	The great desire of builders to cover green spaces with housing , in doing this they are actually causing an even greater need for more green areas for peoples health and leisure. Surely brown sites should be used for housing and green areas for recreation.see above
C93	I support the CPRE suggestions on the southern Green Belt
C95	The current green areas need to be maintained
C97	There is a definite need for Winchester to be protected to the south of the City. including around the sttlements of Oliver's Battery. Compton and Hursley. This would preserve the character of Winchester and surrounding areas.
C98	Needed in the south to protect the 'green lung', recreational spaces and productive farmland around villages e.g. Olivers Battery, Hursley, Compton.
C99	I think we need it to prevent urban sprawl joining Winchester ,Eastleigh, Portsmouth and Southampton .
C100	I am very concerned that without a green belt Winchester will spread and create an urban sprawl. This in turn will swallow up separate and much loved individual communities such as Sparsholt and Hursley. it would fundamentally change the nature of this part of Hampshire.
C101	If it stopped development of green fields, then it can only be a good thing. IF. IF. IF.
C103	The Council thinks it is needed in the South to avoid coalescence with neighbouring settlements, and to protect the countryside.
C104	Since the COVID-19 lockdowns, large numbers of local people have discovered the area between Olivers Battery and Hursley and are using the area for exercise, either on foot or by bicycle. It is quite striking how many passers-by we see making their way along Momford Road, either to strike-out across South Winchester golf course, or to utilise the country tracks or footpaths to the South of this locality. Hence the area has growing amenity value for the local population and has exceptional biodiversity. Environmentally this is an area of chalk downland, in effect, an extension of the natural features that have resulted in the setting up of the South Downs National Park. Whilst I am not suggesting this area to the South of Winchester should be included in the park, I do think it is appropriate to assign it as green belt.
<b>C105</b>	The comment has been removed as the respondent requested their response not to be published
C108	Protect our green fields from development
C110	The beauty of Winchester is its access to close countryside. It needs protection especially to the south of the city, including around the settlements of Compton, Oliver's Battery and Hursley.

C111	<p>Bearing in mind the large amount of development potential requirements slated by developers and landowners alike, there is a need to ensure that expansion of housing in the area is properly controlled to meet defined requirements. The proposal for Royaldown has exposed the potential of an alarming amount of green space around the Southern edge of the City/district becoming a mass housing area. This would remove the current pleasant, and needed, green space "lung" for the residents for leisure and well being and also form a link of development getting ever nearer the boundaries of Eastleigh and Southampton conurbations. We need to fully use up current Brownfield sites before embarking on the need to incorporate further "green" land in any expansion proposals.</p> <p>As reported locally : Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit.</p> <p>Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:          check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery to assist in safeguarding the countryside from encroachment to preserve the setting and special character of the historic town of Winchester to assist in urban regeneration, by encouraging re-use of previously used (brownfield) land.</p>
C112	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C114	Experience with Barton Farm and the proposals for Royaldown show that this is necessary to protect farm land, in this instance.
C116	The comment has been removed as the respondent requested their response not to be published
C117	We need more green areas.
C118	I don't know about the north of the district. I believe there is a real need to protect the countryside and landscape to the south of Winchester. This is important to protect the character and integrity of Winchester and surrounding villages such as Hursley. Excessive building in this area would create conurbation stretching from Winchester through to Southampton.
C119	<p>Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.</p> <p>once the land has gone into other use eg large scale residential site, it will never be recovered and the hugely historic nature of the area will have been destroyed .</p>

C120	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C122	There should be provision of a new green belt to ensure protection of the rural Parishes and the Town itself and to allow more biodiversity in the area.
C123	Yes to the South and West
C124	Too many plans of massive housing estates. This year has shown how important green space is to the well-being of everyone. We need to protect our countryside for further generations.
C125	For environmental protection and to support the objectives to achieve carbon neutrality
C126	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C127	The continued push to link Winchester to Basingstoke with new towns and developments is exhausting for residents and the district as a whole. A green belt would further reduce this risk while providing much needed protection to wildlife corridors and areas in our district.
<b>C128</b>	The comment has been removed as the respondent requested their response not to be published
C129	In North Waltham we are concerned by the urban sprawl & spread Southwards from Basingstoke and it now seems proposed new urban areas to the South of us near Micheldever! Our village settlement will therefore be increasingly squashed in the middle - it's such a beautiful area of greenfield & green belt and as a family we strongly feel that it should be allowed to remain as just that.
C130	To preserve/protect land and local communities south west of Winchester. Greenbelt protection would be an added biodiversity safeguard
C131	Winchester needs protection to the South of the City including around the settlements of Oliver's Battery and Hursley. I think an exceptional measure is needed for the Oliver's Battery south to Hursley stretch. I am particularly concerned about safeguarding the area around the tumuli in the field adjacent to the end of Oliver's Battery Road South, and the continuation of the ancient pathway across and up onto Yew Hill, and the southwards on the ancient walkway to Silkstead and Hursley. I have consulted with local archaeologists on this matter. There is, as I understand it, evidence of Bronze Age, Iron Age, Roman and of course 17th century settlements up on Oliver's Battery, and while the Iron Age enclosure reused by Oliver Cromwell's Battery by the church/shops was excavated in the 1930s, other sections need to be further investigated before the bulldozers come in laterally, east - west from Compton across to the Romsey Road and destroy the evidence.

C133	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley otherwise it will end up merging with Eastleigh, Chandlers Ford and Southampton in the end.
C136	I think this is too late, as Winchester is nearly a suburb of Southampton. Green belts areas should be defined and be prohibited to all developments
C137	The comment has been removed as the respondent requested their response not to be published
C138	A new Green Belt would protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements.
C141	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C144	For the protection of Rural areas green spaces and to stop Rogue planning applications. The Pandemic has taught us how valuable all these areas are.
C145	Winchester needs protection, to the south of the city, including the settlements in Compton, Oliver's Battery and Hursley.
C146	there has recently been a relaxation of rules about building on green field sites. This could lead to urban sprawl and despoliation our our beautiful countryside. Winchester has already seen the start of this with over 2,000 houses built on the fringes of the town. No more please. The suggested settlement of Royaldown for eg is an abominnation.
C147	Winchester needs protecting from over development before it becomes unrecognizable. Protection is needed to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C148	South of the city requires protecting particularly around Compton, Olivers Battery and Hursley
C149	This exceptional measure is needed if we are to prevent the type of infill which has led to a continuous development with the destruction of much green space south of the M27, making Portsmouth to Southampton almost one big Solent conurbation. South of Winchester is the lungs of the City with downland for walking directly accessible from the town. The value of this green space relates to health and wellbeing, tourism, carbon neutrality, environmental and wildlife sustainability. It has an exceptionally uplifting quality of landscape. It has economic value beyond measure because mental and physical health are priceless.
C150	To achieve your targets for sustainability these areas will be needed
C151	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.

C152	The countryside to the south of the city between Oliver's Battery, Compton and Hursley is some of the most beautiful in the county and to lose it would be a tragedy. It therefore needs the protection of a Green Belt.
C155	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley. In particular the threat of major development such as the proposed 'Royal down' scheme and the inclusion of South Winchester Golf Club in the SHEELA threaten valued green spaces to the South of the city.
C156	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery, and Hursley. In particular, the threat of major development such as the proposed 'Royal down' scheme and the inclusion of South Winchester Golf Club in the SHEELA threaten valued green spaces to the South of the city.
C160	It is not possible to identify a single area which justifies the 'exceptional measure' criterion.
C161	Expansion of Barton farm, winchester village etc are reducing the quality of life in winchester through congestion and reduced countryside. This needs to be addressed ASAP and so much development and density prevented
C162	The comment has been removed as the respondent requested their response not to be published
C164	in the north: significant developments in Basingstoke, need a green "buffer". if a green belt is not established, we risk in the longer terms losing massive parts of green space as developments continue to grow and creep. the south is similar, bordering with eastleigh,
C165	South of Winchester needs protection because of the outstanding countryside, South Downs National Park and the present and immediate danger of town and villages being joined up.
C166	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C167	The areas to the south of the city, and particularly around Compton, Oliver's Battery and Hursley., need protection.
C168	It is not possible to identify a single area which justifies the 'exceptional measure' criterion.
C170	None.
C172	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C174	Having recently moved to Winchester, I'm dismayed to find that the south of the city seems to be under threat from very large property developments. We need to protect the land and wildlife around Oliver's Battery, Compton and Hursley. A green belt would offer the highest level of protection.
C175	Maintain strategic gaps between settlements
C176	development

C177	The local infrastructure in the south of the city cannot sustain any future increase in traffic as the current numbers already causes extensive congestion and with it major increase in fumes
C180	Winchester needs protection to the south of the city, including round Compton, Oliver's Battery, and Hursley to prevent the city becoming part of the Portsmouth/Southampton conglomeration
C181	Winchester needs protection to the south of the city, including round the settlements of Compton, Oliver's Battery and Hursley - more widely to prevent the city becoming part of a Portsmouth/Southampton conglomeration
C182	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C183	To protect the gap between winchester and its surrounding villages
C186	Quite unnecessary.
C187	The pressure on housing from London workers wanting to move out post-Covid is likely to increase demand for housing and thus lead to increasing pressure for development on greenfield sites.
C191	Stop building more houses
C192	<p>Winchester needs protection, to the south of the city, beyond the suburbs. The Royaldown development plan has brought this issue into sharp focus for us all.</p> <p>Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing. This is becoming more unusual as so many towns are now stretching into the countryside. This must not happen to Winchester, once capital of England, a historic and beautiful city.</p> <p>A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire.' Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit.</p> <p>Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> </ul>

	<ul style="list-style-type: none"> <li>• to preserve the setting and special character of the historic town of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously used (brownfield) land.</li> </ul>
C193	I do not see protection of the City's "Green Belt" as an "exceptional measure", rather I believe it is an imperative upon WCC representatives. The recent proposed development to effectively join up the south west of the City to the villages of Hursley and Compton is almost beyond belief and farcical that it should be given consideration even in an amended format.
C194	The local plan includes a number of strategic and local gaps which are intended to stop communities coalescing. These have been effective but do need continual reinforcement, since developers often seek to override them.
C195	the threat to our open spaces by large housing or commercial developments and land owner greed
C196	To prevent infill of land between the edge of Winchester and neighbouring areas.
C197	Yes to the South to protect unique downland
C198	There are risks of communities being joined up, creating a conglomeration of town and villages. The current risk is to the south between Winchester, Compton and Hursley. Such development reduces the stock of agricultural and wood lands, increases production of greenhouse gases and reduces the absorption of such gasses.
C199	Such green belts should be fully protected in order to give visual benefit and open space for air quality, wildlife to preserve the countryside and prevent urban areas growing outwards whilst the centres of such areas stagnate or fail to be developed.
C200	The comment has been removed as the respondent requested their response not to be published
C202	Both areas
C208	The coalescence of settlements along the A27 means that "Solent City" has become a reality by stealth. It has significant northern extensions within the boroughs of Havant and Eastleigh, and even Fareham now plans extending up to its boundary with Winchester. Winchester has so fr resisted this, with the major exception of Whiteley, and needs a strong policy to prevent further encroachment by Solent City. Without a green belt, it would be hard to retain the open areas north of Wellborne, Whiteley and Boorley Green. A Southern Green belt would stop Wickham joining up to Fareham, Whiteley to Curdrige and Botley, and Eastleigh's eastern parishes to Durley, Owslebury and Bishops Waltham.
C211	As above. The importance of protecting our green spaces, countryside and associated biodiversity cannot be overstated for all the well documented reasons.
C214	The aggressive developers and the weakness in our planning system

C215	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C216	I do not think it is an exceptional measure. Such green belt that is remaining should be protected at all costs.
C217	There is a requirement for new houses to be built - this exceptional measure is to ensure they are delivered in a way that is beneficial to society in general rather than the most economically attractive option for the builders.
C218	Too many towns and villages are gradually becoming one as development on the outskirts continues with increased flooding risk due to surface water runoff and big impact on the natural environment
C219	The comment has been removed as the respondent requested their response not to be published
C220	In view of recent proposals, such as the 'Royaldown' scheme, Winchester more than ever needs protection, including to the south of the city around the settlements in Compton, Oliver's Battery and Hursley.
C222	The comment has been removed as the respondent requested their response not to be published
C226	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C227	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C228	Particularly in the South there is the danger that large tranches of land being promoted for inclusion in the Plan will bring undue pressure on roads and social facilities and most importantly visually and socially bridge the gap between communities to the south.
C229	To prevent villages running together and "sprawl" so maintaining the individual village character. Sprawl types of development over strains local infrastructure.
C231	For south west of Winchester town, to protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C232	Preservation of unique downland environment and existing wildlife habitat is vitally important. Once destroyed it cannot be recovered. In addition, preservation of existing local village communities without absorption into large sprawling urban conurbations is of great significant.
C233	South Winchester golf course provides an open space for enjoyment of the public and wildlife. The plan for development on this site would detrimental to this.

C234	<p>I don't think this is an 'exceptional measure' and it concerns me it is stated as such.</p> <p>There is spreading development on the outskirts of Winchester and the threat to develop more of the countryside immediately surrounding the city. This sprawl is unattractive, contributes to major traffic issues, damages historic country sites and natural habitat. It also has a negative impact on the attractive appearance of Winchester to tourists.</p> <p>The beauty of Winchester and its beautiful surrounding countryside should be protected by a green belt.</p>
C235	<p>The repeated attempts to foist unwanted developments on land south west of Winchester town and to protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt provides the only realistic means of protecting the local environment, maintaining current biodiversity, and allowing for recovery of the rural area from ongoing human depredations.</p>
C236	<p>The district, and Hampshire more widely, already features a number of significant built-up areas which have increased significantly over recent decades. There is a very real danger of further development resulting in these merging and forming large conurbations. While openness between built up areas currently exists it is not designated as Green Belt and current and future planning protections risk being inadequate in this regard.</p> <p>There is now a climate emergency. Green belt assists urban regeneration by encouraging the recycling of derelict and other urban land, for example brownfield and previously built on sites. Building on brownfield and previously built on sites has a much lower impact on the environment than developing greenfield sites.</p>
C237	<p>Winchester needs protection to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley</p>
C239	<p>In the light of recent proposals such as 'Royaldown' Winchester needs better protection to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.</p>
C240	<p>The settlement gaps to the south of the city, including around and between the Compton, Hursley and Oliver's Battery need to be more strongly protected.</p>
C241	<p>Current urban sprawl is leading to the blurring of Winchester City boundaries. The settlements of Compton, Hursley and Oliver's Battery need to be preserved. Protecting open countryside with a Greenbelt will permit more biodiversity, whilst at the same time retaining the shape and setting of Winchester City. With Brexit the opportunity to increase domestic consumption of locally produced food will help reduce the need for imports and hence be more environmentally beneficial. The establishment of free ports in Southampton and Portsmouth is likely to create further demand for housing and this should be kept within the existing boundaries of these towns.</p>

C242	In the South! Winchester is set in exceptional countryside and it is part of the plan Vision to protect this. This will not be achieved by constantly having to campaign against building plans and the area around Oliver's Battery, Compton and Hursley needs to be protected, including South Winchester Golf Course.
C243	Loss of spaces between settlements and natural habitats
C244	Green belts are designated for five purposes: 1. Prevent urban sprawl 2. Prevent the joining together of major towns and cities 3. Protect the setting of historic towns 4. Assist in protecting the countryside from encroachment 5. Encourage urban regeneration We are loosing the country side between our villages and towns due to development by stealth and week local plan polices for the countryside
C245	This is necessary because of the increases in housing capacity being forced on us by government policy. We must try to preserve the countryside around Winchester.
C246	As Kings Barton is proceeding and other developments on edge of urban area have planning permission there is no need to provide more land for development either north or south of Winchester so Green Belts are needed in both areas.
C247	A Green Belt would have been a good idea previously to protect the gap to the south of Winchester in particular.
C248	To contain development on the important gaps and green edge areas are particularly reverent to the South of the Winchester City. This needs exceptional planning measures and whilst Green belt status in itself is open to challenge it is probably the best protection against the erosion of the countryside and Gaps policies .
C249	There needs to be either a Green belt both in the North and South to protect the essential character of Winchester City or much better planning regulations where the preservation of the countryside has primacy and that any development has to be shown to be carbon neutral and developing a new community/existing community but not simply being a dormitory commuter settlement
C252	Green belt is very important forcing the use of land in the communities to be maximised. Don't sprawl - it destroys. Realise that the centre of Winchester - the retail areas, the are near the station and the area that should be referred to as Friarsgate for historic reasons need repurposing and maximum greening at the same time The area formally known as Friarsgate needs to be a green corridor especially given the waterway artery through town and its importance for wildlife and water management .

	<p>Don't build mini towns like King's Barton and make all development green with max vegetation and trees. Certainly don't destroy the area South of Winchester from the golf course to Hursley.</p> <p>Hampshire is an exceptionally beautiful county where town and country have been largely separated. When planning was less considered we ended up with oddities like Littleton and South Wonston being developed - not good in terms of the organic development of communities. (The locals have done a good job of some retrofitting their communities, I admit.)</p> <p>I would make the whole area of Hampshire a National Park excluding the current settlements and only allow them to develop in their boundaries. This would help drive high value work in the county and force development to areas of the country as a whole that need it most. I have family in Stoke and in the North East. These are the sort of areas that need regeneration most.</p>
C253	<p>Yes, a green belt is very much required to the south west of Winchester to protect rural parishes and the shape and setting of Winchester town. Protecting the countryside will also allow more biodiversity. It would quite rightly move development to the much better suited brownfield and previously developed land, including that in central Winchester. It would also result in limited in-keeping development of existing settlements, making maximum use of the existing infrastructure.</p>
C254	<p>The villages / settlements in the south are very close to each other already whereas there is more space between villages / settlements to the north of Winchester.</p> <p>Winchester therefore needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.</p>
C255	<p>Yes. To cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Green belt will also allow more biodiversity.</p>
C256	<p>As above - on going pressure to develop as one of the best places in the UK to develop</p>
C258	<p>An increasing threat to the natural environment which already supports biodiversity and sustainability. There appears to be no natural assumption that all brown field sites would be exhausted before incursion into green space.</p>
C259	<p>Opportunistic building proposals on green field sites such as Royaldown near Oliver's Battery, Winchester. This area is a green lung where we regularly walk, and it would put too much pressure on the infrastructure of the area.</p>
C261	<p>The south of Winchester needs protection, including around Oliver's Battery, Hursley and Compton</p>
C262	<p>Yes, to cover south west of Winchester town and to protect rural parishes and the shape and setting of Winchester town. Protecting open countryside will also allow more biodiversity.</p>

C263	I am in favour of a Green Belt to the south of Winchester. In my opinion, Green Belts are essential to help combat significant new threats, such as global warming, air pollution and the decline in the natural environment, by helping to prevent suburban sprawl and maintain space around small local communities that can be used, if necessary, to meet the needs of those communities in a sustainable way. This is particularly true in the area to the south of Winchester where large scale development could eventually merge the areas of Oliver's Battery, Compton, Hursley, Otterbourne and Chandler's Ford if allowed to go unchecked. Such areas also help act as the green lungs of the environment and provide green corridors necessary to support wildlife that small, isolated green spaces do not . The global pandemic has demonstrated the importance of green spaces in helping people to maintain their mental health and wellbeing.
C264	To provide added resistance to wholesale development.
C272	The countryside is being eroded piecemeal. It needs protecting.
C273	A WCC determination to expand the population.
C274	Chalk down land loss. Exaggerated need for housing instead of resisting pressure on the South of the Country and properly developing the North and poorer areas which have so long been neglected. Force the Government to accept its OWN priorities. Hampshire is ideal for tree planting growth. The County and the Town should consider being asked to be a centre of excellence for this aspect of national life.
C275	The comment has been removed as the respondent requested their response not to be published
C277	For the Southern Parishes it is difficult to see where a Green Belt would fit between the PUSH area and the boundary of the South Downs National Park. How would a Green Belt stop the above erosion of the rural fringes?
C278	The protection of the countryside that seems to fall through the gaps of current protection. Look at the rural areas on the fringes of Winchester district, assess if they are protected at all.
C279	The infrastructure in the area -particularly to the south can not support significant development - the roads are already struggling to cope with the volume of traffic on a normal day. The development of the green spaces would have a significant impact on the local ecology, the quality of life and the wildlife in the area
C280	In the south of the district , areas of Fair Oak , Horton Heath, Hedge End , West End and Eastleigh have become an increasingly large residential sprawl of housing which seems to be very cramped, high density and soulless with no particular landmarks or specific identifying features. Urban design and a sense of place appears not to have been a priority in their design. Areas of green belt or settlement gaps help to prevent the residential sprawl of development and gives identity to places by nature of the large interruption of green fields and woodland spaces.

	Protection of and access to green belt land is necessary for the wellbeing residents of these densely developed housing estates
C281	Yes, if this is in addition to existing green belt, to protect our green spaces from development.
C282	Large landowners such a Winchester College and others are cashing in on the property boom. With a change of working habits and promotion of the countryside for housing in the media ,the countryside needs greater protection. Central government policies are making it easier for landowners to override local opposition to development.
C283	Spreading urban sprawl is at risk of creating a swathe of development from Basingstoke to Winchester eating into agricultural land which is going to be vital for food production in the future and that is an invaluable community resource for leisure, improving well-being and health generally.
C285	We are threatened by creeping ribbon development, infilling spaces between what are currently separate communities. To the north Micheldever is under threat, as is Littleton. To the south, the proposed developments at South Winchester Golf Club and 'Royaldown' mean that the whole area between Oliver's Battery and Hurley could become one dormitory suburb. The occupants of these developments will all be commuting along roads which are already close to gridlock. I believe the 2 South Winchester plans propose up to 6000 houses. That is 9000-12000 cars potentially driving down Romsey Rd and Badger Farm Rd. This is ridiculous, especially considering the existing increase in traffic from developments at the prison site, Winchester village, and the creeping developments of Romsey Rd and Chilbolton Rd.
C286	Protection is needed to the South-West of WC. The Royaldown proposal is a current example of reducing considerably the current open green space, as is the proposal to develop around Micheldever. A Green Belt encompassing land west of the South Downs National Park, including Compton , Oliver's Battery and Hursley , is needed to protect these existing settlements from over-development and destruction of the countryside.  This should not be considered an 'exceptional measure'. This protection should be acknowledged by the LA as a matter of good planning and protection of its area of supervision.
C287	The danger of the wholesale destruction of our local green areas.
<b>C288</b>	The comment has been removed as the respondent requested their response not to be published
C290	Less housing
C291	Winchester needs protection, to the south-west of the city, beyond the suburbs. Royaldown has brought this issue into sharp focus for us all. Winchester is still a city where it is quick and easy to access beautiful countryside, for

	<p>leisure, for recreation and wellbeing. This has been brought to the fore during the COVID-19 experience and the need for accessible 'open space'.</p> <p>The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city.</p> <p>A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C292	<p>In the south, development pressures are intense and as such, Test Valley BC has supported a Green Belt which I think WCC should also support.</p> <p>Having a Green Belt in South Winchester district would support the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>- check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>- to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>- to assist in safeguarding the countryside from encroachment</li> </ul>

	<ul style="list-style-type: none"> <li>- to preserve the setting and special character of the historic town of Winchester</li> <li>- to assist in urban regeneration, by encouraging re-use of previously used (brownfield) land.</li> </ul>
C294	<p>South/ North I don't know which area should be protected. But definitely yes yes yes!! It's sad to see the countryside being eaten away by a rising tide of development. One constantly hears of new threats to local landscapes for instance the Royal Down proposals on the edge of Winchester.</p> <p>One bad aspect of such development is the destruction of historic country lanes and the intrusion of street lighting. Such artificial light is known to be damaging to Moths.</p> <p>We need to retain and protect areas with a Green Belt while some wildlife survives.</p>
C295	Waterand Whitely being highlighted as development areas but would th the danger that the entire south of the district will merge into the larger towns that straddle the M27 and encroach on the Countryside including South Downs
C298	The comment has been removed as the respondent requested their response not to be published
C300	Maintaining the Denmead Gap with Waterlooville
C301	To safeguard settlement gaps, towns and villages being conjoined by mass housing.
C304	<p>we should be mindful of protecting our rural setting south of Winchester which is heavily used for leisure and relaxation . Covid 18 has made this need even more apparent. we should think of providing / maintaining our current open, natural spaces close to city centres so all can easily access them.</p> <p>we should prevent urban sprawl and merging of settlements and use the 15minute city idea .</p> <p>we should encourage biodiversity these ideas would help prevent future pandemics</p>
C305	<p>The coallescence of settlements along the A27 means that "Solent City" has become a reality by stealth.</p> <p>It has significant northern extensions within the boroughs of Havant and Eastleigh, and even Fareham now plans extending up to its boundary with Winchester.</p> <p>Winchester has so far resisted this, with the major exception of Whiteley, and needs a strong policy to prevent</p>

	<p>further encroachment by Solent City.</p> <p>Without a green belt, it would be hard to retain the open areas north of Wellborne, Whiteley and Boorley Green. A Southern Green belt would stop Wickham joining up to Fareham, Whiteley to Curdridge and Botley, and Eastleigh's eastern parishes to Durley, Owslebury and Bishops Waltham.</p>
C306	<p>Absolutely.</p> <p>Once it's gone, it's gone. Winchester Town doesn't have much going for it, driving through the city today, it was dirty, empty shops, too much traffic, too many shops, not enough people living in the centre. Historical centre neglected and undervalued.</p> <p>What Winchester does have is beautiful countryside surrounding comfortable suburbs. If you get rid of that, particularly in the South West Quadrant, what do we have left at all?? The land needs serious preservation - we're not making any more. We need space for leisure, recreation, tourism, all the more after Covid, which has been a complete game changer.</p> <p>There is unacknowledged pressure from the larger conurbations to off load housing allocations onto Winchester District. Through walking, cycling, rambling visiting, exploring, the countryside around Winchester is vital to all of us. If we lose it, we all suffer.</p>
C307	<p>I'm not sure it that "exceptional". But changes in circumstances include increasing pressure on greenfield sites for housing and a continuing reluctance to use brownfield sites. There is also a much greater public awareness of the need to preserve open countryside, brought about the lockdowns among other things</p>
C308	<p>Existing green belt should be preserved to provide edges to communities and preserve community identity and allow wildlife corridors around the towns and villages.</p>
C309	<p>Current countryside policies have stopped development in the countryside already. Green Belt can be amended in the future by a Local Plan if needed, so it wouldn't protect the countryside as those promoting it suggest it would.</p>
C310	<p>The preservation of areas of rolling hills and valleys which provide a link to the South Downs and the downs to the north of Winchester and include evidence of prehistoric settlement. The importance of preserving the unique status of Winchester as the ancient capital of England surrounded by beautiful countryside. This is a an attraction for tourists which risks being lost if the area becomes overwhelmed with houses and additional traffic, like so many other areas of the country.</p>
C313	<p>The rapid expansion of housing in Winchester has put pressure on green space and makes it a target for development.</p>

	<p>A green belt to prevent housing creep into the countryside surrounding the city should be implemented. This will encourage space in the city to be better used.</p>
<p>C314</p>	<p>The area between Oliver's Battery and Hursley, including footpaths into the surrounding countryside (e.g. allowing walks to Compton and Shawford), is threatened by the extensive Royaldown development. This is essentially a ribbon development along an existing lane and including a proposed new "main road" that will link the separate and diverse communities of Hursley and Oliver's Battery. Such a development will:</p> <ol style="list-style-type: none"> <li>1) Erase the individual identities and rural character of both communities, contrary to the planning objectives.</li> <li>2) As the residential capacity far exceeds the proposed employment capacity of the development, result in a significant net increase in travel into and out of the area with commensurate negative environment impacts.</li> <li>3) Decrease biodiversity by blocking east-west transit of wildlife that is currently possible.</li> </ol> <p>Winchester needs protection, to the south-west of the city, beyond the suburbs. Royaldown has brought this issue into sharp focus for us all. Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing.</p> <p>The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city.</p> <p>A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit.</p> <p>Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>· check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> </ul>

	<ul style="list-style-type: none"> <li>· to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>· to assist in safeguarding the countryside from encroachment</li> <li>· to preserve the setting and special character of the historic city of Winchester</li> <li>· to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C315	<p>Paragraph 135 of the NPPF states "The general extent of Green Belts across the country is already established. New Green Belts should only be established in exceptional circumstances, for example when planning for larger scale development such as new settlements or major urban extensions."</p> <p>The SIP proposes a relatively minor increase in the District's housing requirement of 75 dwellings per annum over the current Local Plan provision. This modest level of change does not constitute an 'exceptional circumstance' and can be accommodated through the controlled release of allocations at Winchester and the market towns and main villages in without causing urban sprawl.</p>
C316	<p>This is NOT an exceptional measure.</p> <p>Do the WCC/HCC really see a huge sprawling mass of housing from Eastleigh through to the South Downs as really being great news for everyone. Hedge End and Botley are now connected by housing with Southampton. It's just one huge mess of housing.</p>
C318	<p>The exceptional measure is the climate emergency we are facing. You need to act now to stop the destruction of our countryside.</p>
C319	<p>SHELAA process puts all areas at risk of major greenfield housing development. And please see below...</p>
C321	<p>When is enough development enough development? I appreciate fully that everyone needs somewhere to live but planning targets are so short term. There is no real long-term thinking i.e. what will all this endless building do in 70 years' time? Will people finally say stop when Winchester is attached to London? I can imagine in 70 years' time a new trend will happen called 'rewilding' that will mean knocking down all of these houses and making them into green spaces again because it will be one endless concrete jungle.</p>
C325	<p>TO PROTECT OUR WONDERFUL COUNTRYSIDE</p>

C326	<p>100% for sure encroachment into green belt should never be allowed in our local plan area... The natural environment south of Winchester is of particular significance and sensitive... chalkland, archaeology, nature and protecting it surely would protect and enhance local biodiversity. The southern area should be incorporated into the South Downs National Park and be protected. Such development would destroy the character of Winchester and the villages in the area.</p> <p>The area north of Winchester has critically important forested areas. Both are important in dealing with climate change and carbon reduction issues.</p>
C327	<p>Protection to the south-west of the city is desirable because of the significant pressure for development in this area as evidenced by the Royaldown proposals and the activities of a developer on the South Winchester Golf Course. It is essential to avoid the merging of neighbouring settlements such as Oliver's Battery, Hursley, Compton &amp; Shawford and to preserve the setting and special character of Winchester.</p>
C329	<p>Not sure I understand the 'question' but too many green belts/settlement gaps are being lost through 'exceptional development', which is not exceptional but is rather being promoted by those with more power and influence than those who oppose it.</p>
C331	<p>Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.</p>
C332	<p>Yes, a new Green Belt is required to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.</p>
C333	<p>The rural landscape in the south of the district (and in neighbouring authorities) is being destroyed by the large number and enormous size of recent and planned housing developments.</p>
C334	<p>To protect communities, especially market towns and villages, from encroaching suburban development, including from adjacent boroughs. It needs to be made crystal clear to developers that such land is not available to them, and never will be. The consequence of failure to do so could be the creation of even more suburban sprawl which would damage biodiversity and destroy the unique character of some historic villages to the detriment of many residents on the area.</p>
C335	<p>Evidence of large developments already creeping into green-field sites - Barton Farm, Pitt Village</p>
C336	<p>A new Green Belt is required in the south of the district. Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021, and attached Reports.</p>

C338	<p>The land to the south of Winchester city, including around the distinct settlements of Compton, Oliver's Battery and Hursley needs to be protected. This is to maintain the identity of each of these parishes and to prevent them being absorbed into Winchester city, resulting in a continuous urban sprawl across a large area of central Hampshire.</p> <p>Creation of a Green Belt would also help maintain and improve biodiversity in the open countryside. Currently, there are many wild animals including fallow deer, hares, owls, red kites, buzzards and sky larks living in this area, and other animals such as golden plovers using the fields to feed and rest, when they are on migration. It is imperative these animals and their habitats are given full protection.</p>
C339	<p>I would like to see new Green Belt to both to the north and, particularly, to the south of the district. I am particularly concerned by the recent proposed development of Royaldown, together with development pressures on Pitt Farm and South Winchester Golf Course. Such potential large scale development of green field sites would spoil the unique character and nature of Winchester. The beautiful countryside to the south of Winchester is worth protecting for the future wellbeing of all.</p>
C342	<p>Yes, in the south and west. This would protect the rural parishes and the shape and setting of Winchester City by maximising use of existing infrastructure, forcing development onto brownfield sites and keeping urban and rural separate. It would mean that the City boundaries would remain as they are and not incorporate existing parishes.</p>
C343	<p>Planning policies need to be rigorous enough to dispense with this need.</p>
C344	<p>The comment has been removed as the respondent requested their response not to be published</p>
C345	<p>Re-development of brownfield sites should always come first and thus if a new green belt achieves this then that is to be welcomed</p>
C346	<p>Development is eating green space and will continue to do so unless prevented, e.g. Barton Farm.</p>
C347	<p>Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity. Similarly in the North of Winchester where considerable erosion of agricultural land has already taken place.</p> <p>The continuing failure of existing policies to protect the Green landscape around Winchester and District.</p>
C348	<p>Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity. Similarly in the North of Winchester where considerable erosion of agricultural land has already taken place.</p>

	The continuing failure of existing policies to protect the Green landscape around Winchester and District.
C350	Decline of wildlife in Hampshire
C351	Why do you think a Green Belt is 'exceptional'. Are you already biased against this idea? Green Belts have been around for years in the UK so are not 'exceptional'. They can be very helpful in fighting off any ruthless Building companies who wish to ignore the Local Plan and force a local authority to allow building on greenfield land which the local authority & the community wish to protect.
C352	Agree that one is needed to the south of Winchester City.  A Green Belt to the south of the city will prevent city sprawl, stop large scale housing proposals for this area and give opportunity for future generations to access countryside close to the city.  The COVID experience has shown that more access to countryside is needed for physical and mental wellbeing. The 'Living Well' online event gave evidence that the St Luke Ward to the south of the city was particularly lacking (Grade D) access to open space and that access to green space levels up inequality.
C355	Basingstoke and Winchester are at risk of becoming a megalith merger.
C358	The green spaces around Winchester need protection. The spaces to the south of the city Compton, Oliver's Battery and Hursley should be kept as distinct entities and not form one joined up conurbation. Protecting open countryside with green belt will allow more biodiversity.
C359	Planning applications like the re-cycling centre at Three Maids Hill & Down Farm & the solar farm off the A34 are all examples of how the country side is under threat. Existing planning policy does not always make it possible to reject these applications
C360	The loss of green space to the south of Winchester would be detrimental to the long-standing aim to retain open space between Winchester and Compton and Hursley. Much was achieved by keeping the M3 out of the Winchester Water meadows and preventing development of Bushfield Camp site, previously agricultural land. To the North of Winchester the remaining agricultural land (including butterfly land) should be retained to keep the attractiveness and benefit of open land in the setting of Winchester.
C361	Winchester needs protection, to the south-west of the city, beyond the suburbs. The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city. A Green Belt, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the

	<p>demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester district's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C363	<p>The changes in circumstances are threats such as Royaldown to destroy the natural beauty of the area, to build roads over our historic footpaths (the "road" to Silkstead from Yew Hill, for example, has been used since prehistoric times, also Port Lane. )</p> <p>The wooded lanes and sweeping fields have brought sanity to local people as we have been confined to our small area during the pandemic. It has concentrated our minds on what really matters and has safeguarded our mental health, as it has for all those in the city, who walk here regularly. We also have a butterfly reserve which is home to species under threat as well as endangered chalk downland flowers. Lack of biodiversity is a threat to the human race along with climate change. Once this habitat is lost it can never be regained.</p>
C364	South - to protect the rural parishes.
C365	It is a blunt instrument that will not help reduce carbon emissions, even if all other steps fail, especially since so much of the district is already a national park.
C372	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p>

	<p>Test Valley BC has supported a Green Belt at its meeting on 26 th February 2021. WCC should follow suit.</p> <p>Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>· check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District’s southern boundary</li> <li>· to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver’s Battery</li> <li>· to assist in safeguarding the countryside from encroachment</li> <li>· to preserve the setting and special character of the historic city of Winchester</li> <li>· to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C375	<p>The pressure to increase housing in this already crowded part of the country means that there is a continuing temptation to take the easy option of a large green field development. By establishing a green belt we would ensure that the efforts and ingenuity of developers were directed inter alia to identifying brownfield sites. The exceptional measure is justified by the degree of pressure to consider green field sites and the catastrophic consequences of allowing Winchester to become part of the Southampton urban sprawl</p>
C376	<p>I am worried by the potential Royal Down development</p>
C377	<p>It is necessary so that the historic CITY of Winchester retains it's own unique and distinct footprint in this part of Hampshire.</p>
C379	<p>The threat of insidious growth joining urban areas together to the exclusion of green environments, wildlife habitats and corridors.</p>
C382	<p>It is required now -</p> <ul style="list-style-type: none"> <li>to protect the Biodiversity of the District</li> <li>to protect the Natural Environment of the region</li> <li>to retain the character of the District</li> <li>to protect the villages and market towns.</li> <li>to provide the setting for Winchester city</li> </ul> <p>The pandemic has demonstrated that people, for their physical and mental well being, require open spaces such</p>

	<p>as would be afforded by a Green Belt. It would also encourage people to move to the District as would be a most attractive feature.</p>
C385	<p>Many of our built areas are sprawling further and further so that we end up with very close and nearly joined up conurbations. Where at all possible individual identities of settlements should be maintained and the overall feel of a well greened environment maintained</p>
C386	<p>For the Southern Parishes it is difficult to see where a Green Belt would fit between the PUSH area and the boundary of the South Downs National Park. It should however be thoroughly explored to ensure settlements remain distinctive. Robust policies would be required to prevent the continued erosion of the rural fringes and settlement gaps.</p>
C387	<p>The comment has been removed as the respondent requested their response not to be published</p>
C388	<p>Speaking as a resident of Winchester city, I think all of the land surrounding the city should be designated Green Belt in order to preserve its unique historical and cultural heritage. Proposals such as Royal Down pose a real threat to the integrity of the city.</p>
C392	<p>In the south west to protect the rural settlements, their character and distinctiveness plus to allow more bio diversity</p>
C393	<p>Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.</p>
C394	<p>Climate change</p>
C395	<p>Biodiversity round the area near the Beer Forest along the River Meon Includes orchids, foxes, barn owls, bats and garden birds and more</p>
C397	<p>A new green belt will prevent uncontrolled urban sprawl and will allow local citizens easy access to the countryside which is very important for mental health and physical wellbeing. We have a rich biodiversity in our green areas and this should be protected. Once greenfield sites are urbanised, they are lost to future generations.</p>
C398	<p>the air quality in the area is already bad and traffic density is becoming worse and worse - with more and more people trying to travel in to the City for work / school / treatment / leisure and public transport not being able to support the increased demand. Extending the city further to encompass local green fields will only make this worse - with more and more people travelling in to the city.... rather than the city being developed from within to provide more accommodation / support (urban regeneration has been so successful in many other parts of the country / world).</p>
C399	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's</p>

	<p>Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District’s southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver’s Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C401	<p>To prevent neighbouring settlements merging into others eg. Hursley, Compton, Olivers Battery. To safeguard countryside from encroachment such as the development of Royaldown and the recent news now is that South Winchester Golf Course is now being considered. Winchester only has 3 Golf courses to lose a lovely Leisure facility and a home for lots of wildlife eg ducks, nesting birds and a beautiful forest etc would be devastating.</p>
C402	<p>To prevent neighbouring settlements merging into others eg Hursley, Compton and Olivers Battery. To safeguard countryside from encroachment such as the development of RoyalDown and the recent news now is that South Winchester Golf Course is now being considered for development of 1072 houses. Winchester only has three golf courses to lose a lovely leisure facility and a home for lots of wildlife eg ducks, nesting birds and a beautiful forest would be devastating.</p>
C403	<p>Potential loss of agricultural land if a proposal such as Royal down is carried forward</p>
C404	<p>winchester needs protection to the south of the city, winchesters charm is due to its quick and easy access to the countryside for leisure recreation and welll being. This type of feature is becoming more rare as urban sprawl takes over, as a result the countryside around winchester needs protection so tha winchester does not become one of those towns stretching into the countryside. winchester must be protected and its historical beauty must be preserved.</p> <p>a green belt to ther south of the city incorporating compton hursley and olivers battery is needed allowing space around settlements for the demonstrable needs for future growth.</p> <p>having a green belt would be consistent with the 5 purposes set out in the NPPF:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District’s southern</li> </ul>

	<p>boundary</p> <ul style="list-style-type: none"> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic town of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously used (brownfield) land.</li> </ul>
C406	None
C407	<p>Winchester needs protection, to the south-west of the city, beyond the suburbs. Royaldown has brought this issue into sharp focus for us all. Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing.</p> <p>We have lived close to the field by Texas Drive for many years and have seen this space develop into a much loved community area. During the pandemic this has accelerated. The abundance of wildlife that can be found must also be preserved.</p> <p>The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city.</p> <p>A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit.</p> <p>Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>

C408	Having seen the plans for Royaldown, I am completely convinced of the need for this area of South West Winchester to be categorised as green belt. This should cover Olivers Battery, Compton and Hursley. As we have seen in many other parts of the South of England, once even small developments start to be permitted, this rapidly increases over a relatively short number of years. The Test Valley has recently supported the Green Belt initiative. I dont want this part of the city to become an urban sprawl with increased traffic and high density housing. The loss of open space, access to countryside and loss of habitats would be seriously detrimental to this part of the city as well as the people of Winchester.
C409	The Royaldown proposals highlights the threat to the character of Winchester & the surrounding villages & countryside. Winchester currently is a highly desirable place to live but this has made it prey for greedy developers. This is not about housing need, it is about profit. Do not be deceived by the 'green wash' of these proposals & talk of affordable housing, this is about money. We need a Green Belt to protect our countryside & outdoor spaces that can be enjoyed by all - residents & visitors.
C412	The comment has been removed as the respondent requested their response not to be published
C413	We need houses. We live in a very green county. Green belts at the edge of cities benefit people who live in large houses on the outskirts of towns and keep up property prices. Green wedges in big cities are better because people living nearer the centre can access them also but we live in such a small city that the countryside is never far away. Calls for a green belt are just an hysterical reaction to people who don't want to see development near them.
C414	Protect the countryside and make use of brownfield sites, outlined by the CPRE, for sustainable housing developments.
C417	Winchester needs protection, to the south of the city, including around the settlements in Compton, Oliver's Battery and Hursley.
C420	Winchester needs protection to the south of the city, including the settlements in Oliver's Battery, Compton and Hursley.
C425	The creation of a greenbelt in all predominantly rural areas would remove the incentive for landowners to propose large residential developments more or less at random in the district.
C428	Winchester district and Hampshire have a significant number of built-up areas. There is a big risk of further development merging these areas (e.g. between Winchester and Basingstoke). Green belt status would help secure these open areas and reduce the risk of one large built up area and the impact this would have on the environment and existing habitats.

	Brownfield/ previously built on sites would have much lower impact on the environment than developing greenfield sites. Winchester district would be benefit from encouraging this by securing green sites with Green belt status.
C429	The South of the district has suffered disproportionate loss of open countryside and gaps and is in danger of settlements coalescing. Gaps policy has not been sufficiently robust and is overruled both at allocations and at development management stages. The circumstances have not suddenly occurred, the change has been gradual and creeping, as bit by bit the countryside and the spaces between settlements has been eroded away. The pattern is most evident in Fareham and Havant to the south, with no real expanses of remaining countryside. It is not too late in Winchester district to prevent the same fate, but the time must be soon before the moment is lost.
C430	We must protect the green land south and southwest of Winchester to protect both the rural Parishes and the shape and setting of Winchester town. This is key to protect and boost biodiversity. The green area around Winchester is what makes the city so special. If we blur the lines between city and countryside we lose what makes the city a great city and the countryside so special. Sprawling suburban developments represent very inefficient uses of space, housing very few people per square mile, whilst destroying an essential natural resource, that is key to our culture, mental health, and wellbeing as a people.
C432	As well as the land at Texas mentioned above, the "overnight" construction of Winchester Village on a greenfield site caught many people unawares, and the threat of development on South Winchester Golf Course and the speculative, proposed "Royaldown" development, again on greenfield land, has only added to the general unease of the effectiveness of existing policies. In addition, the COVID pandemic has brought into sharp focus the need for quick and easy access to the beautiful countryside surrounding our city for recreation and exercise purposes. It would be tragic if the very countryside which has been so vital to our general well-being over the past year was lost to development.
C433	To cover land south west of Winchester town and this will allow more biodiversity
C434	The comment has been removed as the respondent requested their response not to be published
C435	To cover land south west of Winchester town in order to protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity. The recent COVID outbreak has illustrated the serious necessity of a green belt and existing resources have been heavily used and appreciated by Winchester residents. As was recently stated by the UK Chief Medical Officer, "COVID is something that we will need to live with in the future"; as such, we should be placing the highest value upon our existing, accessible green spaces.

C437	To protect the natural environment and make sure that the plants and animals that use these spaces are kept alive and thrive because the habitats are suitable to grow in and reproduce in.
C439	It is needed to the south of Winchester. The COVID experience has shown that more access to countryside is needed for physical and mental good health and to level up inequality. The 'Living Well' online event gave evidence that inequality was linked between the St Luke Ward to the south/west of the city and it being lacking (Grade D) access to open space. A Green Belt to the south of the city will prevent development sprawl, stop large scale housing proposals for this area and give opportunity for future generations to access countryside close to the city.
C440	I think a green belt is a dangerous term and idea. By doing this other green areas will be open for building on and you risk protecting some areas at the expense of others.
C441	Winchester will cease to be a desirable place to live and visit if the surrounding countryside is not protected. Any proposals that threaten to destroy Winchester's countryside will destroy the essential character of this historic city. A greenbelt should be considered for the South of the City.
C442	The comment has been removed as the respondent requested their response not to be published
C443	Yes, to cover land south west of Winchester town and to protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow for more biodiversity and to prevent urban sprawl.
C444	The comment has been removed as the respondent requested their response not to be published
C445	To reduce the pressure to join two major urban areas such as Southampton and Winchester. To remove these areas for future planning opportunities.
C448	The comment has been removed as the respondent requested their response not to be published
C449	<p>Fundamentally, it would protect this area from 'your' generation to 'mine' and thereafter.</p> <p>Without this, Winchester, the corridor along the M3 and Southampton International Airport (with the new runway extension now agreed) will always come under pressure for more development.</p> <p>A new Green Belt would prevent this loss of countryside and the sprawl of Winchester into the surrounding villages. It would prevent the proposal for 'Royaldown' or similar in the future as an example of the above.</p>
C452	Our towns and villages are beautiful spaces which need protecting. By having a green belt or similar we can go some way to ensuring that we protect these spaces. Otherwise inadvertently development creeps up and before you know it, the green spaces are gone.

C453	The expansion of the city's housing estates due to commercial pressures from developers as much as the 'projections' for how many houses are needed, somehow needs to be resisted. The city itself should not grow so much that its green surroundings are built on, as is currently threatened. The Barton Farm development houses, for example, are taking up far more land each than they need to and not so much land was necessary to be swallowed up.
C454	The comment has been removed as the respondent requested their response not to be published
C455	Both the southern and northern parishes need protection to prevent an urban sprawl, from areas such as Portsmouth and Southampton in the south and from Basingstoke in the north. If we are not careful the only green space we will be left with will be the South Downs National Park. Our countryside needs to be protected. Existing Green Belts that protect villages such as Denmead from encroachment from Waterlooville etc. must be respected and reinforced. The demand for housing must not be at any cost.
C456	The comment has been removed as the respondent requested their response not to be published
C461	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more bio diversity.
C462	To ensure the important landscape setting of Winchester is given adequate protection and that encourages a careful assessment of where additional development can be sensitively added within the existing settlement boundary of Winchester
C463	I don't understand the question. If you mean that the creation of additional Green Belt is an 'exceptional measure' then I struggle to understand why it should be classed as such. Winchester has undergone considerable development over the last 10 years - most notably Barton Farm and Winchester Village developments. Green Belt protection is needed to stop the 'sprawl' and to protect our green spaces to enable the achievement of many of your objectives listed above. Without this, the ability of the population to have ready access to green space and the outdoors will be limited, not only by its proximity to busy roads (which will also affect air quality) but also to housing developments and thus lots of other people.
C464	To counteract the pressure from developers wanting to build houses - in sites that are the easiest and most profitable for them – not at all the same thing as best for the area. Also because the pressure is increased to the south west of the city because of the very fully protected National park to the east and south east. There are areas of historic/heritage as well as environmental and recreational importance around the city that are not in the National Park – e.g. Compton and Compton valley.
C466	The comment has been removed as the respondent requested their response not to be published

C467	To cover land southwest of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Green belt will also allow more biodiversity.
C469	Any development on productive agricultural land is criminal and unnecessary
C470	Yes, to cover land south west of Winchester town and to protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C471	I wish the gap to be retained between Compton and Winchester to the north and Olivers Battery to the west. Also the stretch of land to the south which enables a separation between the villages around Winchester and Chandlers Ford and Southampton to the south. Without this Winchester becomes a very large sprawling mass of housing and industry and loses its unique identity.
C472	Too much building on farmland around the villages
C473	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C475	It is frightening as you drive around the area to see the extent of our country side being lost to housing
C476	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C478	We are facing a climate emergency. We are losing habitats and species and biodiversity loss must be stopped for our security (air, water, food, plants and animals we share Winchester with). We must put the climate crisis at the heart of what we are doing for the Vision and a green belt will be a statement and a start of us protecting the planet.
C481	There is one simple change. We are facing a climate emergency. We are losing habitats and species and biodiversity loss must be stopped for our security (air, water, food, plants and animals we share Winchester with). We must put the climate crisis at the heart of what we are doing for the Vision and a green belt will be a statement and a start of something brave and far reaching for Winchester.
C482	Would force the issue of brownfield first which is completely underplayed in the plan It would stop urban sprawl and developments merging Protect the southern parishes
C486	I feel that there has been considerable consultation via WCC's 2020-2030 Vision. In this green space must be protected; Winchester's green space is as important culturally and ecologically and is as important as Alfred's statue.

C487	<p>Yes, a green belt is very much required to the south west of Winchester to protect rural parishes and the shape and setting of Winchester town. Protecting the countryside will also allow more biodiversity. It would quite rightly move development to the much better suited brownfield and previously developed land, including that in central Winchester. It would also result in limited in-keeping development of existing settlements, making maximum use of the existing infrastructure and minimising carbon footprints.</p>
C488	<p>We currently live on the Southern Perimeter of Oliver's Battery, overlooking fields in all directions and with views of the South Downs National Park. If developments like Royaldown proceeded there would be no protection of beautiful countryside between Compton or Hursley. Winchester City would become amalgamated with both Compton, Otterbourne, Chandlers Ford and Eastleigh. A significant chunk of countryside which sits between these settlement would be built on. I don't currently see how this valuable countryside is being protected.</p> <p>The Oliver's Battery Recreation Ground is exceptionally popular and at the weekend, many families travel from central Winchester to enjoy the park and the accompanying views and walks in the country. If Royaldown happened the whole aesthetic of the park would change and the enjoyment Winchester residents currently have would be gone.</p> <p>Additionally the fields and footpaths to the South of Oliver's Battery have been used extensively during Covid, and I sense this degree of use will become unchanged as so many have discovered and enjoyed this natural habitat.</p> <p>When my family and I use this habitat we pass so many other walkers, bike riders, horse riders and runners. Royaldown would completely change this and remove all accessible green space to the south of Winchester. As you walk along Hurdle way, many people stop to admire the views of St Catherines Hill, one of the rolling fields in the foreground of this view is proposed for housing under the Royaldown proposal, likewise the walk would be interrupted by a road to the new development. I don't think this route will appeal any longer to the multiple people who enjoy it right now. People would have to drive to reach an alternative environment to give them the tranquillity, time in nature and views they currently enjoy. This goes against creating an environment where green spaces are accessible by walking or cycling.</p> <p>A green belt would save this valuable land.</p>

C489	To cover the lands that lie around Winchester Town from Olivers Battery South and Kings Worthy and South Wonston in the north. There is no need for new large-scale building plans in these current green areas.
C490	The comment has been removed as the respondent requested their response not to be published
C491	For example the Royal Down and other rogue proposals.
C492	I think corridors are needed for wildlife rather than a belt that shifts according to economic needs.
C493	Remembering that Winchester was an historic capital of the country, its unique character and scale need to be preserved. A crisis point has been reached where the latest development plans are reaching far beyond its natural boundaries and threatening to engulf its entire character. Once lost, for example St Catherine's Hill, it can NEVER be regained.
C494	A Green Belt to the south and south west of Winchester is essential to avoid continuous development from the shoreline in Southampton up to and including Winchester, otherwise it is just Solent City.  Olivers Battery, Hursley and Compton require protection from further development.
C496	Winchester needs protection, to the south of the city, including around the settlements in Oliver's Battery, Compton and Hursley. Chalk downland of this quality is becoming increasingly rare and the habitats it provides need to be protected.
C497	Yes, to cover land SOUTH WEST of Winchester town and protect both the rural Parishes, including HURSLEY, and the shape and setting of Winchester town from unsustainable and unacceptable urban sprawl and development. This area of countryside should be viewed as a strategic gap not only to preserve the natural environment and protect biodiversity, but also to prevent the inexorable creep of urban agglomeration (and resulting pollution and traffic and 100s of other impacts) which can never be reversed. Protecting open countryside with a Green Belt will also allow more biodiversity as well as enhance the mental and physical health benefits it brings for all. If we have learned anything throughout the pandemic this last year, it is the vital importance of fiercely protecting our already limited green, natural, and productive arable spaces. It should be the core belief of any council that truly has green and sustainable ambitions for the future, and really understands the steps that must be made to combat climate change.
C498	We must protect the countryside and the continual 'joining' and over development of our present communities. We do not want endless roads / houses / factory units there will be no England left. We need to be pushing back against any higher house building targets and drive to ensure that in this area we have Green spaces, Villages and Market towns that remain for the next 5000 years as they have for the past 5000.

C500	Do not understand a question referring to a new Green Belt when not sure if one is required nor whether it need be North or South.
C501	We are building bigger and bigger developments that merge into the next area. I've seen the impact of this in Yorkshire where there is no gap between villages where there used to be a clear destination between them. With a huge loss of green space.
C502	Proposals for new towns from speculators
C503	The comment has been removed as the respondent requested their response not to be published
C507	I think policies should cover all countryside not designated Green Belt which seems to make other non-protected areas 'fair game'. Green Belt creep is well known where agriculture is gradually degraded by 'pony grazing' and scrub so that it becomes ripe for development by the back door
C510	A Green Belt to the south and south west of Winchester is essential to avoid continuous development between Southampton and Winchester thereby creating an urban conglomerate. The Green Belt is essential around the settlements of Compton, Olivers Battery and Hursley.
C511	Solent City is too close to becoming a reality.  Strategic gap between Winchester and Eastleigh/Chandlers Ford needs to be enforced before Southampton and Winchester are conjoined
C513	Winchester needs protection, to the south-west of the city, beyond the suburbs. Royaldown has brought this issue into focus . The footfall in our area has increased massively during lockdown showing what a crucial 'green lung' it is to Winchester. People need to live near countryside spaces and the area around Olivers Battery has proved to be a vital life line for many families, walkers, cyclists. There needs to be a gap between developments so people have to travel less far for recreation. This allows small scale developments to still take place but not large developments that reduce us to urban sprawl. The large scale loss of countryside must not happen to Winchester. Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing. It is also a very historical significant city. + If we wish for people to live close to communities and restrict the dependence on the car we need to check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary. + we need to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery building communities and independence.

	<p>+ we need to assist in safeguarding the countryside from encroachment sustaining people's mental health.</p> <p>+ we need to preserve the setting and special character of the historic city of Winchester to continue the sense of individual identity.</p> <p>+ we need to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land. This encourages less car use. I, for one, would love to move into the city into a smaller property or flat, freeing up a 3 bedroomed house for a family.</p>
C514	We need to stop the incessant creep of development in this area. Especially if we are going to lose our local hospital. The population in our local area is already exceeding the supplies we can provide.
C516	Experience of 'Green Belt' elsewhere can create a barren non-biodiverse area with only large houses allowed to creep into them. There should be no need if there are policies in place to map Green corridors, manage land sustainably etc
C517	I support a green belt to protect our settlement gaps
C518	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity.
C521	These areas should be designated in some way to protect them from schemes such as Royal Down, which is an outrageous plan that should never have been allowed to see the light of day by Winchester City Council.
C523	It should be done now, regardless of any future change in circumstances to exactly prevent any future change of circumstances
C529	The planning system is allowing an unnecessary encroachment on greenfield areas. This must be stopped, and perhaps even reversed.
C530	To protect rural areas from repeated campaigns by developers for major housing developments that are based solely on the profits to be made from their landholdings in these areas.
C531	To protect land to the South of Winchester and the neighbouring parishes. Protecting this land will preserve the current biodiversity and and enable more biodiversity actions in the future.
C533	<p>Land based designations have the potential to severely limit the supply of housing across an area and consequently have a negative impact on affordability and access to housing.</p> <p>Any new allocation of land as Green Belt within the district should be based on tightly defined parcels, demonstrating they are necessary and meet the five tests of the green belt set out under paragraph 134 of the NPPF.</p>

	Any designation should be considered in the whole against other environmental constraints and the level of housing need and the ability of the district to deliver the necessary housing, not just over the current plan period, but acknowledging that green belt reviews should be a once in a generation occurrence.
C534	The comment has been removed as the respondent requested their response not to be published
C537	It's not an 'exceptional measure'. Having a green belt will protect the countryside around the Winchester area for use by all residents and visitors. It will prevent an urban sprawl that has been seen elsewhere, where there is minimal outdoor spaces for enjoyment.
C538	to prevent to gradual expansion of the city, generating a large sprawl away from its current size.
C539	This is not an exceptional measure. It makes sense to protect the rural and agricultural character of the NE quadrant of the LPA area from inappropriate development.  Rural residents should not be required to suffer for the sins of the urban majority.
C540	Paragraph 135 of the NPPF states "The general extent of Green Belts across the country is already established. New Green Belts should only be established in exceptional circumstances, for example when planning for larger scale development such as new settlements or major urban extensions." The SIP proposes a relatively minor increase in the District's housing requirement of 75 dwellings per annum over the current Local Plan provision. This modest level of change does not constitute an 'exceptional circumstance' and can be accommodated through the controlled release of allocations at Winchester and the market towns and main villages in without causing urban sprawl. Even if the housing requirement were to rise to take account of unmet needs and affordable housing needs we consider there are adequate sites and policies that can allocate and control development without the requirement for a Green Belt. The designation of a Green Belt anywhere in Winchester's district would be wholly unnecessary as normal development management policies have successfully controlled the location and extent of development in the district through successive Local Plans.  It is also inappropriate to consider Green Belts under the heading "Biodiversity and the Natural Environment" as they are a tool for controlling urban development and are not a measure of the quality of the natural environment.
C542	If it is considered difficult to provide sufficient housing to meet local needs then a compromise would be to allow some degree of urban sprawl in exchange for new green belt nearby, but this would need to be "real" and the land subject to strict controls over re-development, perhaps by designating it as a conservation area/national park.

C543	There is a need to provide a mechanism that prevents the area being developed in one large "city" by continually combining villages and market towns into large conurbations which then lose their identity together with the feeling of belonging to a true community.
C548	I support any planning policy or designation which increases protection such as Green Belt for the countryside to the south and west of Winchester including land adjacent taking in more of the western boundary.  Barton Farm and Pitt Manor on the west side of the City were the subject of two appeal decisions and demonstrated the lack of protection available to prevent the expansion of the City into Winchester's landscape setting. In the decision process the Inspector considered that the proposal would be detrimental to the integrity of Winchester.
C549	But it needs intentionality. For example the creation of corridors to link areas of great natural beauty and heritage. This would encourage biodiversity.
C550	Climate emergency
C552	The constant risk of Winchester town expanding, eg Royaldown
C554	Exceptional because COVID has shown the positive impact of countryside on our physical and mental health and this area needs to be protected for future generations. Exceptional because it prevents sprawl between the villages such as has happened between Compton and Otterbourne except for one last field. Exceptional because I think Winchester (as a distinct historic city) is on the brink of becoming a sprawl and whether I would then want to live here.
C555	The danger of Winchester being subsumed in a continuous urban sprawl from Kings Worthy to Southampton water.
C556	I think a green belt is very important. I do not necessarily think a new one is needed but old ones should not be used for development. If they have already been used then a new one is needed.  Stop building on our green space
C558	Winchester needs protection, to the south west of the city, including around the settlements in Oliver's Battery, Hursley and Compton.
C560	The discovery of nearby open spaces by those who, until lockdown, were unaware of their beauty.  Signs of overuse particularly in bad weather.

C561	We just need to be sensible and to focus development in and around teh major city developments of winchester and waterlooville
C562	See CPRE paper - 'Planning for a Green Belt for South Hampshire'.
C563	House planning volumes relative to connections infra structure are nuts and imbalanced in existing developments. A hard green belt is the only way to counter continuance of this and urban sprawl before we become a highly unplanned city like Chiangmai
C564	The comment has been removed as the respondent requested their response not to be published
C566	The one we've got is fine if you stick to it ie no new towns in the middle of beautiful countryside.
C567	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C568	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> </ul>

	<ul style="list-style-type: none"> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C569	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C570	<p>We need to consider whether Winchester, which is to some extent a dormitory commuter town, will continue to attract new residents in the post-Covid era, when home-working is likely to increase substantially. It would be tragic if beautiful surrounding areas, which are so beneficial to the health and happiness of current residents, were lost in false expectation of continued housing need.</p>
C573	<p>I think that existing new build developments are already showing to be a mistake. At time of writing both Barton Farm and Winchester Village have not been fully sold. There are areas off Romsey Road, Chilbolton Avenue etc that are 'one property down and multiple dwellings up' that are large in size but have no outside space. Driveways are being paved over for car parking and garage conversions. Flooding seems more prevalent - there is just nowhere for run off to go. The area towards Hursley already floods regularly and it just makes no sense to build in that area. The area around Badger Farm, Compton, Shawford and Olivers Battery is on the edge of an SSI. Green Belt would serve multiple purposes.</p>

C574	Having a small protected area and building over all the rest is not a solution - the rise in value of existing houses which are in or near the new Green belt, and the fall in value of those which get built round would be unfair. But the National Park is allowing too much in the way of new house building and extensions so more protection is needed.
C576	<p>In the south there is already very little green between the mass which extends out nearly to Twyford and all along the coastal part to Portsmouth. It is imperative that no more large scale development is allowed in this area. So much beautiful countryside has already been destroyed in the name of money.</p> <p>In the north I think there is a greater need for some larger scale development as there is still a lot of beautiful country land to be enjoyed but the Micheldever plan for example would probably benefit a lot of people in the direction of Basingstoke</p>
C577	Yes, to cover land south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. Protecting open countryside with a Greenbelt will also allow more biodiversity. Winchester needs protection, to the south-west of the city, beyond the suburbs. Royal Down has brought this issue into sharp focus for us all. Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing. The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city. A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.
C579	The proposed developments which seem to want to develop gaps between settlements. People in settlements need the gaps for their wellbeing
C580	We support the arguments put forward by the CPRE in this regard
C588	We are in a climate emergency and land rich with biodiversity needs to be protected.
C589	<p>1 The threat of the imposition of places like Wellbourne.</p> <p>2 Too much development in the South thanks to PUSH, northwards from the sea!</p> <p>3 Lack of control of immigration is causing too much pressure on the services and infrastructure.</p>
C593	The Green Belt is a policy for containing urban sprawl around conurbations and arse intended to for long term protection. South Hampshire over many years has been a focus of growth as a result of National Policies, and appears to continue to be so. . Key countryside and coastal assets have been protected in a wide variety of ways, each focussed on the particular value of that feature eg SSSI / SAC/ SPA, Strategic gaps.etc etc. Some of these are set in stone some are flexible but they have been a major determinant of the emerging urban form of South

	<p>Hampshire.</p> <p>In the last 15 years, the available land for South Hampshire's growth has been further curtailed by the creation of two national Park's New Forest and the South Downs.</p> <p>The creation of a green belt in South Hampshire would result in directing growth to central Hampshire ie the Basingstoke /Winchester/ Romsey / Andover or to the City of Winchester itself; the City has been very successful in limiting suburban growth up to now but now seem poised to bust its boundaries with large scale suburban housing. No Green Belt; it has unintended consequences.</p>
C595	The comment has been removed as the respondent requested their response not to be published
C596	Recently there has been press coverage of a new development south of Winchester around Compton, Olivers Battery and Hursley, which would effectively join these hamlets to and extend Winchester's suburbs.
C597	Please see representations made to Planning Policy, submitted in PDF form.
C598	To avoid urban sprawl. The proposed plans for housing in south Winchester would pretty much join Hursley to Winchester!
C603	<p>Winchester needs protection, to the south-west of the city, beyond the suburbs. Royaldown has brought this issue into sharp focus for us all. Winchester is still a city where it is quick and easy to access beautiful countryside, for leisure, for recreation and wellbeing.</p> <p>The large scale loss of countryside must not happen to Winchester, once capital of England, historic and beautiful city.</p> <p>A Green Belt, incorporating land west of the SDNP, taking in land in Compton, Oliver's Battery and Hursley, allowing space around settlements for the demonstrable needs for future growth.</p> <p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's</li> </ul>

	<p>Battery</p> <ul style="list-style-type: none"> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
--	---

**How would a Green Belt designation contribute to achieving sustainable development in the district and adjoining areas?**

Respondent Number	Respondent Comment
C2	Major development should be based around existing settlements
C3	It would force developers to build sustainably in a limited and controlled manner with due respect for the landscape in which they are building.
C5	It would enable settlements to avoid anything other than small or individual developments which would be sustainable in individual settlements. Huge new estates would be restricted to areas such as Whiteley, and Barton Farm.
C6	It depends on how much development is required
C11	A Green Belt would enhance a sense of community, prevent the area from becoming continuous sprawl and thereby increase community welfare and economic resilience.
C17	It would focus development on urban areas where housing is most needed and not on villages which lack the supporting infrastructure
C19	Plans such as Royaldown between Hursley and Oliver's Battery do the very opposite of protecting our countryside. We should respect and protect greenbelt
C22	Specific areas, around the perimeter of the green belt, would be chosen.
C23	it wouldn't.
C25	Encourage development on brownfield sites. Focus sustainable development on those villages and settlements that are not in dander of coalescing with the urban south.
C27	Rather than answer the question as put, I would say that a green belt need not be counterproductive to achieving sustainable development. It would enhance all our lives and improve carbon capture alongside the built environment where it needs to be.

C28	Less development and more space to exploit green initiatives
C31	The comment has been removed as the respondent requested their response not to be published
C32	They may not.
C33	Sustainability as we have discover in 2020/1 is about us all having access to the Green space for our mental and physical wellbeing. You only need to look at how the Blackwoods have been used by families during the lockdown. The green belts and sustainable development go hand in hand without one you cannot have the other.
C36	Not at all The National Park serves this purpose plus many nature & historic designations at parish level
C40	Already you are trading away Green Belt for your definition of "good" development. The need for Green Belt stands regardless of development benefits.
C42	The Green Belt, if designated would keep the southern parishes rural communities separate from the urban sprawl to the south and enable their character and unique features to be maintained. WCC, rather than FBC, would the be able to guide and monitor sustainable development in these unique settlements.
C47	Green belts have not been very impressive in terms of achieving good land use - far better on a place by place basis to define aspects of the setting and open spaces that must be protected. This is particular y important with regard to Winchester town Different settlements need their own plans - a generic approach is not appropriate
C48	As in previous answer.
C50	Less development in one area will inevitably lead to an increase in other areas but that would be preferable to spoiling green spaces. The High Streets are dying as retail declines owing to the increase in shopping Online, Car Parking being discouraged, made difficult and expensive. The High Streets could be converted to residential or a mix of residential. There are many Brown Field sites as swathes of industry has closed over the years, more use should be made of Brown Field sites, these should be the priority rather than approving building on green spaces.
C57	Properly managed a green belt would provide access within walking distance to existing green spaces - taking the city out into the countryside - and equally, provide an opportunity for vegetable, meat, and dairy producers to start up closer to market - bringing the countryside into the city.
C58	see above

C59	It shouldn't
C61	See above
C63	It would ensure that such development as occurs would not be on sites which where the impact on the infrastructure would be particularly harmful.
C65	The comment has been removed as the respondent requested their response not to be published
C66	By offering at least a degree of security against inappropriate developments
C75	It would force the development of Winchester to focus on becoming more cohesive in terms of community and travel infrastructure.
C76	Force the focus to make best use of the City and no allow the exploitation of the "simpler" option in the Green belt.
C78	It could be used to protect ares and develop new areas of naturally forests that can be used for recreation and to reduce carbon emissions
C79	Encourage development within existing communities using existing infrastructure, utilities etc. Whilst improvements would be needed it would be more sustainable than building new roads etc. Living closer to existing services and amenities will mean less travel so beneficial for climate change ambitions of the council. I like the idea of the 15 minute community . It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester.
C81	By maintaining a cushion to avoid over development
C82	The comment has been removed as the respondent requested their response not to be published
C87	A green belt will help to protect existing green and open space as an extra layer of restraint. Focus on existing developed sites and redevelop these and have a totally new concept for city centres.
C88	See above.
C95	It would prevent expansion and over development of a rural village which could lead to a decrease of quality life for villagers for various reasons including air quality
C97	A Green Belt would make sure a focus/ concentration on previously developed land (i.e brownfield land). That must be significantly more sustainable than development on green field sites.
C98	Shift to focus on development of brownfield sites capable of achieving sustainability objectives.
C99	By forcing development to be carefully focused not driven by financial gain for the seller of greenfield sites

C100	there are many brown field sites that can be developed if needed. We must preserve the nature of our towns and cities without merging them through urban developments.
C101	It SHOULD stop concreting over of countryside.
C103	To avoid coalescence, protect the countryside and avoid over-development.
C104	Development is better placed on brownfield sites, such as are rapidly appearing in the city centre with the loss of shops. Also on sites such as John Moore Barracks.
C105	The comment has been removed as the respondent requested their response not to be published
C110	A Green Belt would concentrate focus on previously developed, Brown Fields site, land which is more sustainable than development on greenfield sites.
C111	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, which is a previously developed (brownfield) site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the countryside around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land isn't at odds with sustainable development, quite the contrary.</p>
C112	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C114	Sustainable development for who? Winchester and district will always be under pressure and a defined Green Belt would act as a deterrent and focus on brownfield sites.
C116	The comment has been removed as the respondent requested their response not to be published
C117	Do we need more development? Houses should be built in existing villages and towns.

C118	Green belt would contribute to carbon offset. It protects valuable farmland for producing local food and protecting bi-diversity. A variety of green spaces can provide accessible open green space for people's health and well being. Pockets of sensitive development can provide space for green employment and affordable housing. Greenbelt designation can protect against some of the worst excesses of greedy developers.
C119	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester. It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown would be stopped.
C120	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites
C123	Concentrate housing development in existing settlements
C124	It would motivate builders to look at brown field sites and better re- development of smaller sites rather than the 'easy' option of building on a bare field.
C126	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C127	It would protect large areas from over development, allowing biodiversity to flourish. It would reduce transport use from constant city limit expansion, directly reducing carbon emissions. It would cement a clear vision of where the district was willing to consider developments (preferably on brown field areas only), while setting out where developments would never be supported.
C128	The comment has been removed as the respondent requested their response not to be published
C129	By ensuring that beautiful countryside is not lost to new developments. How can building a new town on farmland be seen as a 'sustainable development'? The impact on the surrounding area will be significant in terms of increased traffic, waste, pollution etc - it makes more sense to find sites for new housing developments on the edge of already well established urban settlements.
C131	A Green Belt would ensure a focus on previously developed brownfield land which is significantly more sustainable and ethical than development on ancient greenfield sites.
C133	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.

C136	All Green belt areas are for the well being of all residents and visitors to enjoy. 5 Oaks Fram Winchester Road , Waltham chase , should be made such an area. At present it is used by walkers and horse riders. A quarry is planned instead. This site will be lost for many years
C138	This would focus efforts on making maximum use of existing infrastructure and smarter development of the district in keeping with the environmental goals.
C141	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C144	would meet many of the Carbon neutral objectives. look at using Brownfield sites instead.
C145	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C146	It should avoid infilling.
C147	By designating a Green Belt to the South of the city it would ensure focus on brownfield land, which is significantly more sustainable than development on greenfield land.
C148	It would ensure focus on brownfield type land which is more sustainable
C149	The Green Belt would enhance all the above for Eastleigh, Romsey, Chandler's Ford where dense infilling is already occurring . It would encourage the 'Building Better, Building Beautiful' Government proposal where brownfield sites, adaption of existing buildings and redevelopment of town centres is a priority. It would resist the push from developers for greenfield land where profit is easier but often damaging.
C151	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C152	Having a Green Belt guarantees that the focus is on previously developed brown field land which is significantly more sustainable than development on Greenfield sites.
C155	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites. It would also protect the chalk downs around South Winchester which are recognised as a vital and threatened habitat for many of our native species.
C156	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites. It would also protect the chalk downs around South Winchester which are recognised as a vital and threatened habitat for many of our native species.

C160	Such a designation would simply increase pressure on the remaining areas outside the SDNP, and should not be used.
C161	Keep green belt between winchester and hursley and avoid sprawl to a big anonymous city dwelling
C162	The comment has been removed as the respondent requested their response not to be published
C164	it would stop green areas being used, causing brown field and existing land developed land to be used. This allows new green spaces to be created where they do not already exist, while minimising the impact of new house building and therefore minimising the CO2 emitted.
C165	Ensure that development went into places with least environmental impact.
C166	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C167	It should ensure that development is focused on brownfield land. There seems no reason to develop greenfield sites when brownfield ones have not been developed.
C168	Such a designation would simply increase pressure on the remaining areas outside the SDNP, and should not be used.
C172	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C174	By having a green belt we would draw focus on developing brownfield sites within Winchester, which is far more environmentally friendly and sustainable than building on greenfield sites.
C177	Reduce the increase in cars by restricting house building but we also need to increase/continually support park and ride and local buses
C180	A Green Belt would ensure a focus on previously developed brownfield sites. This is much more sustainable than development on greenfield sites
C181	A Green Belt would ensure a focus on previously developed (brown-field) land, which is significantly more sustainable than the development of green-field sites.
C182	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C183	More development on current undeveloped agricultural land is bad for the environment. we need a green belt around Winchester.
C186	It would not.

C187	A green belt would increase the incentives to better utilise brownfield sites and maximise areas eligible for development. It would encourage developers to look further afield to areas that might benefit more from the influx of wealthier residents.
C191	Stop building more houses
C192	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, which is a previously developed (brownfield) site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the countryside around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land isn't at odds with sustainable development, quite the contrary.</p>
C193	You should concentrate upon redevelopment of "brownfield" sites, a designated "Green Belt" regarded as "untouchable" would surely ensure future focus on these areas. This historic City does not need to steadily become another Andover or Basingstoke.
C195	to preserve it indefinitely from the threat of development
C197	Protect bio diversity of the downland
C198	<p>It would concentrate growth nearer the centre of the town, focus such development on brownfield sites, would make more use of existing public transport infrastructure (making it more economic) and provide housing nearer workplaces and services.</p> <p>It would also contribute to a sense of place where communities are more clearly defined.</p>
C199	Such green belt areas would help preserve local air quality and if planted with appropriate trees would also reduce carbon pollution.
C200	The comment has been removed as the respondent requested their response not to be published

C201	The comment has been removed as the respondent requested their response not to be published
C202	It would leave areas of green space untouched as the lungs of the countryside to benefit built up areas
C208	It would retain open land for agriculture, wildlife and recreation, improving the air quality in adjacent areas. It should be combined with in-fill development outside the green belt, Only brown-field development would be permitted within it, leading to better expertise in identifying and redeploying dreilict land throughout the district. Some relaxation of the presumption against back-land development outside the green belt could compensate for the loss of potential sites within it. Policy SH1 recognizes the need to maintain a gap around North Fareham SDA, but does not articulate the similar need around Whiteley. A green belt would address this omission.
C211	Green belt designation is important for all. Furthermore it may help to prioritise development on brownfield sites.
C214	It would support the objective of a sustainable environment, aggressive development will lead to large increases in congestion and pollution in the Winchester locale.
C215	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C216	Perfectly easily
C217	By forcing developers and land owners to consider developing sites that are less economically profitable
C219	The comment has been removed as the respondent requested their response not to be published
C220	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C223	The concept of a Green Belt is flawed as it fails to allow for integrated biodiverse development; it would be far preferable to ensure adequate greenspace within the new developments
C226	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester.
C227	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of

	<p>Winchester.</p> <p>It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C228	<p>It wouldn't it would simply move the pressure to provide the development to more suitable areas.</p>
C229	<p>See above.</p> <p>Also green belt improves local green areas which are beautiful, recreational Value, offering tranquility and a haven for wild life.</p>
C231	<p>It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure.</p> <p>A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester.</p> <p>It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C232	<p>A focus on development in city centre and brownfield sites instead would afford opportunities to develop in a sustainable fashion - make use of existing redundant space, create self-sustaining localised communities and minimise traffic footfall.</p>
C233	<p>Sustainable development would be enhanced by green belt designated areas by reducing overcrowding and concentration of air pollution</p>
C234	<p>Sustainable development does not have to be adjacent to the City of Winchester. Where new development is planned outside of the green belt new transport solutions need to be planned which would enable the sustainable development.</p> <p>I remain concerned that having stated many vague aspirations in the document there is a negative connotation to the questions about green belt designation which from my experience the majority of residents would strongly support.</p>
C235	<p>It would ensure that the local area retains its beauty, amenity and natural biological diversity. This in turn makes the local area an attractive place to live, and supports the financial case for the use of existing brownfield sites for truly sustainable development in a way that is not injurious to the natural environment.</p>

	<p>It would also support the regeneration and use of existing infrastructure to allow the evolution and changing needs of the population in the 21st century. This would allow the area to continue to thrive in the face of changing population demands eg the reduction in retail space usage in the city centre, which could be replaced with homes to ensure a living city into the future.</p> <p>It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C236	<p>Would constrain urban sprawl and prevent the creation of super-conurbations, with all the associated negative impacts upon sustainability.</p> <p>Would reduce greenfield site development, which is an inherently unsustainable form of development due to, for example, the accompanying climate, environmental and biodiversity impacts that arise from it (such as destroying and fragmenting habitats, loss of critical benefits provided by green fields such as water, food, flood control and carbon capture and storage).</p> <p>Would help encourage development on brownfield and previously built on land, which has a much lower impact on the environment and would help achieve sustainable development in the district and adjoining areas, on all sustainability criteria (climate, environment, social etc).</p> <p>Would ensure continued provision of open space around existing built-up areas, with all the associated benefits in respect of people's health and mental wellbeing. A love of the environment, which is typically increased by enjoyment of the countryside and access to open spaces, results in a greater inclination to live sustainably and greater support of sustainable initiatives.</p>
C237	<p>A green belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites</p>
C239	<p>A Green Belt would ensure a focus on brownfield land, which is significantly more sustainable than development on greenfield sites.</p>
C240	<p>The provision of a Green Belt would focus development on existing brownfield sites, and in small developments in market towns and villages to meet LOCAL need.</p>
C241	<p>A Green Belt would ensure that the focus for development would be on the existing developed (brownfield) land. This is significantly more sustainable than than development on Greenfield sites. It will also ensure, through sensitive redevelopment that better use can be made of the existing infrastructure and supporting services. Areas within the Green belt could be earmarked for woodland restoration and other biodiversity projects.</p>

C242	A Green Belt would ensure a focus on previously developed (brownfield) land, such as The Sir John Moore Barracks, which is significantly more sustainable than on greenfield sites.
C243	Encourage urban regeneration Prevent urban sprawl Prevent the joining together of major towns and cities Protect the setting of historic towns Assist in protecting the countryside from encroachment
C244	Encouraging Urban regeneration, reduction in every day travel
C245	It would encourage the Council and developers to concentrate their efforts to provide new housing on brownfield sites and to spread development around the whole district rather than just in Winchester.
C246	Restrict development encroaching onto greenfield sites
C247	Yes
C248	The removal of land as available for development in a Green belt or an area of an important gap would ENCOURAGE the demand for development in the Brown field sites .- many of which are within existing urban areas- close to amenities . It is simply too easy to build on green fields and this should not be allowed .
C249	By its nature, Green Belt designation would promote development within local communities and in the economically expanding areas to the South of the 'Winchester area' and not simply keep expanding 'Winchester City' to the detriment of communities outwit the City
C252	As above.
C253	A green belt will emphasise the importance of the historic rural landscapes around Winchester. Such a measure would stop wholly inappropriate urban sprawl and the merging of settlements with destruction of both countryside and green open or recreational spaces.
C254	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C255	It would force development onto brown field and previously developed land including central Winchester, and limited in-keeping development of existing settlements making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester.It would stop urban sprawl and merging of settlements .A large speculative and high carbon development such as Royaldown would be stopped This speculative and irresponsible development requiring massive car usage should have no place in the sustainable vision and plans for Winchester.

C256	It would mean that brownfield development of existing sites will be a higher priority.
C258	Preventing the further destruction of habitats that already contribute to these goals.
C259	By directing housing development to more appropriate areas.
C261	A Green Belt designation would ensure a focus on previously developed (brownfield) land which would be more sustainable than development on greenfield sites.
C262	It would mean development would go onto brownfield sites and previously developed land, including central Winchester. We can maximise use of existing infrastructure and our district can be proactive in developing the high street now that our consumer habits have changed. Greenbelt highlights the importance of the rural and historic landscape around Winchester and stop the 'urban sprawl' A large development such as Royaldown (which has cars which would greatly affect our environment) would be stopped.
C263	It would help by encouraging developers to use brown field sites and encourage smaller, more sustainable developments. Large, compact developments place even more pressure on the environment. Proposals such as Royaldown and South Winchester Golf Course, for example, would almost certainly significantly increase traffic in the area on already congested roads such as Romsey Road and Badger Farm Road along with the added pollution this would bring. Large developments bring added pressure on water supplies and sewerage systems which have led to unsustainable water extraction demands on the River Itchen and raw sewerage being pumped into the rivers and the sea in times of flooding. Green Belts would help reduce these effects.
C264	Hopefully it would help to prevent it!
C273	Limiting population and promoting productivity.
C274	<p>Sustainable farming needs room.</p> <p>Saving our precious ecology protects carbon use for the future. For example Heath land and wetlands absorb water which protect low lying developed areas.</p> <p>Wild life corridors are now seen to be vital to sustain wild life. In the future we will need the biodiversity of all types of landscapes. Little islands of good ecology are not enough. There must be links and planned wide corridors. ( Miles wide)</p> <p>Over the pandemic I have seen the incredible growth of walking cycling and other low level carbon use activities.( Just outside my back gate) These take space and should be fostered for the community's mental well being as well as for Carbon neutrality.</p> <p>A green belt would make clear to all that the people and the city are making decisions. about development not building firms and developers. Who is really in charge ?</p>

C275	The comment has been removed as the respondent requested their response not to be published
C277	Green Belt would put more pressure to further develop the settlements within the Southern Parishes.
C278	The people that choose to live as we do, country life, are all very environmentally friendly and strive to make their homes so. Designating it as green belt would encourage more like minded people rather than open space attracting non environmentally friendly people. Tighten the rules.
C279	By allocating areas this status, we could shift the focus to previously developed brownfield sites where the infrastructure is more established.
C280	Promotion of biodiversity and ecology. Sustainable forest management. Provision of sustainable outdoor activities which promote free access for people for riding, mountain biking, running, walking, hiking, swimming and other outdoor pursuits.
C281	It would make this challenging but there are plenty of brownfield sites within the plan area that could be developed.
C282	It would concentrate development in areas where infrastructure and transport links exists for further expansion . It would also encourage investment in infrastructure in areas of greatest need. It would encourage farming and forest management where it is known there is a long term future. It would provide areas where nature would re-establish its- self without intervention from pollution ,light, noise and human waste.
C283	Ensuring that new build is focussed on existing sites with consequent efficiency in the use of transport and other infrastructure such as schools. It would help maintain a sense of identity in existing sites with associated community cohesion.
C285	The most sustainable development is provided when people live close to where they work, reducing reliance on cars.  Sustainable development is reasonably priced. There should be an emphasis on social housing.  This is best provided on brown field sites within existing centres of population.
C286	A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of

	the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties.
C288	The comment has been removed as the respondent requested their response not to be published
C290	A reduction in footfall and the need for essential travel which will also be advantageous to the climate.
C291	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C292	<p>A Green Belt in South Winchester would prevent car-based developments such as Royaldown - an unsustainable, carbon-hungry development.</p> <p>A Green Belt would ensure that brownfield land would be used first. This is significantly more sustainable than development on greenfield sites and would provide much needed reinvigoration of Winchester centre, including more housing and affordable-rented properties.</p> <p>High density housing should be introduced in the city centre, to provide a vibrant and energised area with minimal effects on the natural environment and taking up far less natural green space than Royaldown.</p>
C293	It would not do so in this area. It would remove flexibility and concentrate additional development in areas outside the 'green belt' which would also have significant landscape value
C298	The comment has been removed as the respondent requested their response not to be published
C300	It would ensure that Denmead was not integrated into a larger development area with different objectives

C301	Help to stop or limit the urban sprawl
C304	<p>such a designation would allow for smaller developments tacked on to villages and small towns which should be in keeping , usage of brownfield and inner city sites. less urban sprawl is highly desirable</p> <p>it would show we absolutely mean to protect the natural environment for its historic value and beauty and health giving properties</p>
C305	<p>It would retain open land for agriculture, wildlife and recreation, improving the air quality in adjacent areas. It should be combined with in-fill development outside the green belt, Only brown-field development would be permitted within it, leading to better expertise in identifying and redeploying dreilict land throughout the district.</p> <p>Some relaxation of the presumption against back-land development outside the green belt could compensate for the loss of potential sites within it.</p> <p>Policy SH1 recognizes the need to maintain a gap around North Fareham SDA, but does not articulate the similar need around Whiteley. A green belt would address this omission.</p>
C306	Force a re-think on brownfield development over using up greenfield spaces. Bushfield rather than Royaldown or the SW Golf Course.
C308	Designated Green Belt can focus the minds on developing within the towns and villages. Empty building, brownfield sites, redefinition from retail to inner city residential should all be considerations to meet need before consuming green belt and expanding town boundaries.
C309	A Green Belt designation would be counter productive to achieving sustainable development. The housing need will remain the same, but a Green Belt would restrict development in areas that need it. It would result in a less sustainable Winchester.
C310	By making planners ensure that properties do not stand empty , converting any unused properties and using brownfield sites. By preserving areas of countryside and wildlife corridors for all to enjoy and ensuring a better quality of life for all.
C313	<p>The green belt could be used to provide local sources of food, recreation and tourism, helping the district's development.</p> <p>Biosecurity is clearly important, as the current pandemic illustrates.</p>

<p>C314</p>	<p>A Green Belt would protect against an extensive new development such as Royaldown, and force a greater focus on brownfield development. This will minimise environmental impact and make best use of available resources A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary</p>
<p>C315</p>	<p>Bargate Homes consider that a Green Belt designation would be contrary to achieving sustainable development. Paragraph 7 of the NPPF states that "the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs". The introduction of an unnecessary Green Belt designation would stifle the delivery of new development in sustainable locations close to existing settlements, thereby denying the needs of the present and future generations for housing and jobs.</p> <p>Paragraph 135 of the NPPF goes on to set out five strategic Local Plan policy requirements which new Green Belt designations should adhere to and each of these is considered further below, in the case of Winchester District and adjoining areas.</p> <p>a) demonstrate why normal planning and development management policies would not be adequate.</p>

Normal planning policies preventing inappropriate development in the countryside exist as part of the current Local Plan and its predecessors. These policies include Policy MTRA 4 - 'Development in the Countryside' and Policy CP18 - 'Settlement Gaps' of the Local Plan Part 1 Joint Core Strategy. Such policies have been operating effectively in preventing non-essential development in the countryside and retaining the generally open and undeveloped nature of the defined settlement gaps. Any major development has been through the controlled release of land in sustainable locations primarily through allocating sites for development as part of the Local Plan preparation. This process is working effectively and there is no need for a Green Belt designation.

b) set out whether any major changes in circumstances have made the adoption of this exceptional measure necessary.

As set out above, the modest increase in the District's housing requirement of 75 dwellings per annum over the current Local Plan provision does not constitute an 'exceptional circumstance' and can be accommodated through the controlled release of allocations at Winchester and the market towns and the larger villages.

c) show what the consequences of the proposal would be for sustainable development.

The consequences of the proposal would be to unnecessarily stifle the delivery of new development in sustainable locations close to existing settlements, thereby denying the needs of the present and future generations for housing and jobs.

d) demonstrate the necessity for the Green Belt and its consistency with strategic policies for adjoining areas.

Whilst it is understood that the Partnership for South Hampshire (PfSH) is considering the implications of a Green Belt designation across the wider area, no local authority in this area has a Green Belt designation within its Local Plan. Given that PfSH's website states that it is "committed to long term, managed and conditional economic growth and regeneration and to the delivery of the housing, infrastructure, facilities and services necessary to achieve it" it would appear to be contrary to its aims to support a Green Belt designation which would unduly restrict sustainable development.

e) show how the Green Belt would meet the other objectives of the Framework.

	<p>Whilst we acknowledge that a Green Belt designation would in part help meet the environmental objectives of the NPPF, these benefits would not outweigh the negative social and economic impacts such as restricting access to homes and jobs in the settlements where they are needed.</p>
C316	<p>Ecology and biodiversity should be given absolute top priority in my view, and the only way to do that is to introduce a green belt that will not be infringed. The future of this planet means taking some hard realistic looks at what we're doing to the environment, and this area is only a small part of that.</p>
C319	<p>By forcing more creative, brownfield solutions for housing . Almost all brownfield opportunities have 'in built' advantages, when it comes to access to transport, town centre access,, nearby established walkways and cycleways etc.</p> <p>...But it's cheaper and easier for developers to get their hands on greenfields and make more profit - the house prices are the same, but greenfield development costs are way lower, per unit.....</p>
C321	<p>Maybe think completely outside the box with this one. I would love to see some creative thinking here. With the rise in single people wanting to own somewhere, could there be an opportunity for extending some buildings upwards to incorporate a number of flats? Some of the biggest houses that come up for sale in the centre, could they be developed into maybe 3 houses?</p>
C323	<p>As a point of principle, consideration of Green Belt matters should not be included under Biodiversity and Natural Environment as it is a policy tool, its purpose is not one of environment protection.</p> <p>Notwithstanding the above, considerable research over many years has concluded that Green Belts can result in unsustainable patterns of development and therefore increased commuting, which contradicts many of the commendable aspirations set out in this consultation. It is therefore not an appropriate tool for delivering sustainable development patterns.</p>
C325	<p>IT WOULD SAFEGUARD A DEVELOPMENT SUCH AS THE ROYALDOWN MONSTROSITY</p>
C326	<p>It would focus the need to sensitively develop brownfield sites and put pressure on improving existing settlements and communities. Most brownfield sites have existing infrastructure making this policy more economical to deliver.</p> <p>Ensuring Green Belt will deliver distinct environmental, and well-being advantages.</p>

C327	A Green Belt would ensure a focus on previously developed brownfield sites closer to the city centre with transport links and shops close to hand. Developments such as Royaldown would be primarily car based which would negate any potential contributions to sustainable development.
C329	Focuses on expanding larger settlements building out from existing development to maximise opportunities for realistic investment/improvements etc ely etc. Yes still erodes the size of green belt but at least affords a 'belt' of sorts and demonstrates a willingness to protect the natural environment.
C331	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester. It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.
C333	It would protect the historic rural landscape and the quality of life of people living in it, as well as offering a green recreational lung for those iiving in nearby urban areas.
C334	It would require careful planning of sustainable housing in existing communities to ensure that
C336	Please see detailed answer in CPRE Hampshire's written Response to the YPYP consultation dated 9th April 2021, and attached Reports.
C337	It would mean that developments would not be allowed to harm large areas of outstanding scenic value
C338	A Green Belt would ensure developers and the City Council would re- use brown field sites, wherever possible, and would encourage imaginative new designs and uses. These sites already have utilities and road infrastructure easily to hand, making their use much more sustainable than starting from scratch on greenfield sites.
C339	The lack of a Green Belt designation encourages speculative developments such as Royaldown which damage the countryside and which would increase congestion, pollution and demands on already stretched infrastructure and services. Establishment of a new Green Belt would refocus attention to brownfield sites, which would be more likely to achieve sustainable development in the district and adjoining areas. The Covid pandemic and its aftermath risk huge damage to the wellbeing of Winchester district and its residents. Policies such as a new Green Belt and sustainable development of brown field sites would reinvigorate and support existing settlements, populations and businesses in their time of need.

C341	It wouldn't
C342	It would encourage use of brownfield and previously developed sites, minimising the need to use greenfield sites. Small developments in market towns and villages would meet the needs of the local population and support local communities. Encourage the development of new life in the City including residential. A need for 4000 houses has been quoted with half of this coming from Barton Farm. With the developments already in the pipeline, the remaining total is fairly close to achievement with existing applications and, therefore, there does not need to be the development of large areas of greenfield land.
C343	It would depend on where the designation occurred. It would have to be designed to minimise the need for travel and cause zero emissions. To avoid confusion, we would like to see the word 'low-carbon' rather than 'sustainable' in this question. 'Sustainable' on a small scale often refers to the survival of something specific, whether or not it is good for limiting global heating. Land, whether green belt or not must be sustainably managed for maximum carbon capture and maximum biodiversity and production. It should also be accessible for the public and managed for mixed recreation – walking, cycling, community farms, ponds and rivers etc.
C344	The comment has been removed as the respondent requested their response not to be published
C345	will help prevent 'development creep'
C346	It would encourage brownfield and infill development, and a more imaginative approach to housing development such as more flats built or houses converted to flats.
C347	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester
C348	It would force development onto brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester
C350	It would offer some protection to the existing wildlife.
C351	It will encourage people to use brownfield and previously developed land first. It will encourage people to make the best use of the land outside the Green Belt. Surely 'sustainable development' does not mean using up more and more greenfield land while doing nothing with existing brownfield and previously developed land?

C352	A Green Belt to the south of Winchester City will prevent large scale housing development, “push” development onto brownfield sites and facilitate the use of smaller, local development within parishes to help them remain vibrant and sustainable communities.
C358	Having a Green belt would ensure a focus on brownfield site, which is more sustainable than on greenfield sites. It would also force us to look at providing homes in areas of the town that was previously devoted exclusively to retail.
C360	A green belt would help to retain the essential attractiveness of the area as a place in which to live. and work
C361	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>Valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C363	If, for instance, Royaldown were to be built, it would mean 5000 houses, with perhaps 8000 cars, clogging up already busy roads and polluting the atmosphere. There are brownfield sites around the city which would be preferable, in that they would enliven the city centre (there are some quite run-down areas which would be ideal for development and mean that people could live close to where they work, and would not have to travel far. There is also Bushfield camp, close to Badger Farm and local amenities.
C364	It would lead to development of brownfield sites - the obvious areas for development
C365	<p>In many ways it could make the carbon emissions worse.</p> <p>Any designation would need to be carefully considered so that it did not:</p> <ul style="list-style-type: none"> <li>increase the need to travel</li> <li>prevent fifteen-minute settlements</li> <li>obscure the need to manage all land to maximise carbon capture</li> </ul>

	<p>introduce complacency about the urgency of raising the levels of diversity  exclude the public from enjoying its benefits  exclude walking, cycling, public transport facilities  discourage community farms, new ponds, and enhanced river habitats.</p>
C372	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development. A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism. A new Local Plan enables a forward thinking authority to make a positive re- evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C375	<p>The most sustainable development is that which occurs within existing settlement boundaries. Destroying the countryside should never be classified as sustainable.</p>
C376	<p>It would force the development of brownfield sites.</p>
C377	<p>There are brownfield sites to exploit to stop the creation of a sprawl of development in to this beautiful downland.</p>
C379	<p>By specifying requirements for planned and sustainable management around them.</p>
C381	<p>With 40% of the district designated as National Park and the inclusion of robust countryside/rural protection policies in place within the Local Plan, it is considered that an additional designation of Green Belt would not contribute to achieving sustainable development in the district. The designation of a Green Belt would put further pressure on undesignated areas for development and may result in development being required in less sustainable locations.</p>
C382	<p>It would lead to creative solutions beyond the normal mass development of housing estate which would increase traffic immensely and detract from the rural character that we enjoy currently.</p> <p>It would lead to developments on brown field sites, on previously developed land, conversion of retail outlets to housing and the building of small developments in market towns allowing the character to be retained while</p>

	<p>utilising the existing infrastructure. It would also prevent the anonymity of urban sprawl and suburbia as towns, villages, and Winchester become just Greater Winchester and we would lose the character of the District which is so valued</p>
C383	<p>It is considered that a Green Belt designation would not contribute to achieving sustainable development in the District. The creation of a Green Belt would put further pressure on areas outside of the Green Belt and National Park for development and could result in a requirement to build in less sustainable locations within the District.</p>
C385	<p>Making sure that the Green Belt is in the right place/places taking advice of ecological experts would mean that we can focus building around this, rather than having the danger of losing valuable green areas.</p>
C386	<p>Green Belt would put more pressure to further develop the settlements within the Southern Parishes.</p>
C387	<p>The comment has been removed as the respondent requested their response not to be published</p>
C388	<p>This would focus development on brownfield sites which are more sustainable as services and roads are already available</p>
C391	<p>It is required to ensure more brownfield development. There are areas of Winchester where this could be accommodated without resorting to the desecration of greenfield areas.</p>
C392	<p>By forcing development of brownfield sites and more intelligent use of space. It would maximise the use of existing infrastructure and emphasise the historic landscapes that surround Winchester It would stop mad ideas like Royaldown; which would be a car based community and be the opposite of sustainable.</p>
C393	<p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.</p>
C394	<p>It could help to prevent unsustainable growth of housing in the what's left of the countryside.</p>
C395	<p>Containing the developments so that there was less sprawl and there were green corridors for wild life This would also improve environments for the people living in the new developments and existing inhabitants. The opportunity for green development must not be overlooked using the maintenance of green belt and building on fewer green field sites.</p>
C397	<p>A Green Belt designation would prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p>
C398	<p>please see the response above.</p>

C399	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C401	<p>A green belt would prevent large developments like Royaldown and focus on redeveloping on previous developed land eg. brown sites, empty retail outlets. There are parts of the City which are derelict and have been for years and what about the Riverpark Leisure Centre shortly due for closure. These need to be developed first.</p> <p>A development the size of Royaldown would ruin Winchester as it is a city which you can easily access countryside for leisure / wellbeing. This must not happen.</p>
C402	<p>A green belt would prevent large developments like RoyalDown and focus on redeveloping on previous developed land eg brown sites, eg empty retail sites. There are parts of the city which a derilict and have been for some years and what about the River Park Leisure Centre shortly due for closure. These need to be developed first.</p> <p>With the impact of Covid 19 it has had an impact on the city and retail so any plans need to carefully consider what is really needed in the future.</p> <p>A development the size of RoyalDown would ruin Winchester as it is a city which you can easily access countryside for leisure / wellbeing, this must not happen.</p>
C403	<p>Focus then made on brownfield sites and smaller agile areas of development using existing infrastructure</p>
C404	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more</p>

	<p>sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, which is a previously developed (brownfield) site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the countryside around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land isn't at odds with sustainable development, quite the contrary.</p>
C406	<p>Providing open family spaces , preserving the environment Not creating new roads and pollution on fields</p>
C407	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p> <p>A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C408	<p>If allocated as Green Belt, then this would prevent speculative developers targeting this area. It would also provide future for people when looking as to where they want to live and work and probably save money for the council and not having to waste time and effort to deal with applications for development. It would push the developers and planners to more rightly focus on brown field sites which by their nature tend to already have access to better existing infrastructure.</p>

C409	We need to value our unique city and it's downland location. We are not a Basingstoke, we are not a Southampton. We are Winchester - a historical town with accessible, beautiful countryside. Treasure what we have & protect it with a Green Belt designation that keeps it special. We have a legacy which we need to fight for.
C412	The comment has been removed as the respondent requested their response not to be published
C413	It wouldn't.
C414	The same as above.
C417	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C420	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C421	<p>Pressure for development from the south is intense, as is argued in the CPRE paper - 'Planning for a Green Belt for South Hampshire'. The document 'A Green Belt for South Hampshire' was submitted to WCC by Oliver's Battery PC in September 2020 (<a href="https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf">https://www.oliversbattery.info/wp-content/uploads/2020/10/OBPC-Green-Belt-Submission.pdf</a>).</p> <p>Test Valley BC has supported a Green Belt at its meeting on 26th February 2021. WCC should follow suit. Having a Green Belt in South Winchester district would be entirely consistent with the 5 purposes set out in the NPPF, as follows:</p> <ul style="list-style-type: none"> <li>• check the unrestricted sprawl of urban areas of Fareham and Eastleigh along Winchester District's southern boundary</li> <li>• to prevent neighbouring settlements merging into one another, such as Compton, Shawford, Hursley and Oliver's Battery</li> <li>• to assist in safeguarding the countryside from encroachment</li> <li>• to preserve the setting and special character of the historic city of Winchester</li> <li>• to assist in urban regeneration, by encouraging re-use of previously developed (brownfield) land.</li> </ul>
C425	Such a designation in conjunction with policies for sensitive development in existing settlements and brownfield sites would encourage the provision of services in the existing towns and villages. If existing villages expanded slowly facilities such as village shops, schools pubs and so on would become more viable as would rural public transport such as buses.
C428	It would reduce development on greenfield sites (and the environmental and sustainability benefits of this) and encourage development on brownfield/ previously built on sites and other more environmentally sensitive developments.

	<p>It would protect the green space around existing built-up areas which would benefit the health and mental wellbeing of the people living in these areas and promote sustainability.</p>
C429	<p>It would be in accordance with Para 134 of the NPPF June 2019 version:</p> <ul style="list-style-type: none"> <li>a) to check the unrestricted sprawl of large built-up areas;</li> <li>b) to prevent neighbouring towns merging into one another;</li> <li>c) to assist in safeguarding the countryside from encroachment;</li> <li>d) to preserve the setting and special character of historic towns; and</li> <li>e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.</li> </ul> <p>Sub-para d) would apply if the Green Belt were adjacent to Winchester Town, but a), b), c) and e) all apply to the southern parishes of Winchester District.</p> <p>It would force development onto brownfield and previously developed land including Winchester centre, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure. A Green Belt will emphasise the importance of the green and historic landscapes around the historic city of Winchester.</p> <p>It would stop urban sprawl and merging of settlements in the southern parishes. Large speculative greenfield developments which would be car based and not contribute to sustainable development would be prevented. The older urban areas of Portsmouth, Fareham, Eastleigh and Southampton would be encouraged to do a better job of regeneration within their own boundaries rather than spilling over into Winchester.</p>
C430	<p>It will encourage developers to focus on more efficient uses of space, housing more people per square meter in city and suburban settings. It will encourage the use of brownfield sites and urban regeneration. I believe we are about to see lots of old offices and retail space become available.</p> <p>It is the definition of sustainable to protect and sustain the precious green land and the accompanying biodiversity that helps keep our air clean.</p>
C432	<p>By focussing attention on existing brownfield sites.</p>
C434	<p>The comment has been removed as the respondent requested their response not to be published</p>
C436	<p>It wouldn't, it would just be greenwash.</p>

C437	I think that now Town centers are being deserted by the radical changes in the population following the pandemic they should be used to produce new housing and suitable places for both students and first time buyers to start. Developments of cafe, restaurants and shops combined in the town centers offers a new area to open up to development rather than create new housing in green belt land. This would help protect the environment and allow for housing need to be met.
C439	A Green Belt to the south of the city will stop a large scale housing development, such as 'Royaldown' which although it purports to be sustainable uses up greenfields and relies on the use of private cars. A new Green Belt will force development onto brownfield sites and use of smaller, local development within parishes, in turn helping to keep them vibrant and sustainable as communities.
C441	The first step to a greener future is to stop doing harm. Destroying green fields would be an inexcusable act of vandalism when there are other options, such as using brownfield sites. Greenbelt designation will force better creativity in sustainable design.
C442	The comment has been removed as the respondent requested their response not to be published
C444	The comment has been removed as the respondent requested their response not to be published
C445	Refocus the development objectives towards brownfield areas and rejuvenation of town centres - pulling more people back to the centres where small business can support the population living there
C448	The comment has been removed as the respondent requested their response not to be published
C449	It would stop the development of new 'green field' sites which are neither carbon friendly nor sustainable as they rely on the creation of new infrastructure and use of private cars. More achievable and sustainable development is within small scale housing projects designed and agreed by the villages to meet their needs.
C452	Perhaps within the green belt certain types of housing development are allowed - visionary architecture which has minimal impact on the local surroundings both in footprint and visually. There is so much opportunity to use existing and upcoming talent to solve these problems and engaging in new technologies and materials coupled with a greater understanding of the impact of the decisions we make now for future generations.
C453	The Town Plan foresaw a development strategy based on hubs with mixed development including business, retail and housing, rather than massive strategic developments of thousands of houses-only, and the hub approach could apply to local areas as much as the districts of the cities. Why could land not be parcelled and developed in small separate stages by different companies, including rented housing?
C454	The comment has been removed as the respondent requested their response not to be published
C456	The comment has been removed as the respondent requested their response not to be published

C461	<p>It would force development onto brownfield and previously developed land including Winchester centre, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure.</p> <p>A Green Belt will emphasise the importance of the green and historic landscapes around the historic city of Winchester.</p> <p>It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C462	<p>See answer to previous development</p>
C464	<p>If sustainable development is defined as - development that meets the needs of the present without compromising the ability of future generations to meet their own needs - then further of development of Winchester and the countryside around [areas providing the most important green space for recreational/environmental/heritage/aesthetic reasons] - must be protected. Winchester and the more distinct historic surrounding villages, particularly to the south west, need to be kept distinct and not become part of a spreading urban sprawl.</p> <p>Housing and employment sites must then be found in areas more suited [brownfield, within settlements etc], that would not so heavily impact green areas that are worth protecting for the above reasons.</p>
C467	<p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.</p>
C469	<p>It would avoid development that could not achieve sustainable targets. Current plans for solar energy production on greenfield sites are not accompanied by evidence or example in the UK - they are presently fanciful nonsense.</p> <p>In the future crops may be used for energy production.</p>
C470	<p>It would prevent urban sprawl. Help commit to climate change commitments by preventing traffic congestion caused by over development and helping carbon neutrality in minimising mass housing developments merging into other established parishes.</p> <p>It would protect county farm estate farm land which has been under threat because councils have sold off land for housing development. This protection would both help the environment as farmers have a vital role to play in caring for the countryside and in doing so helping get the UK to net zero emissions and making more space for nature. The ambition in cutting food miles is to encourage customers to buy local, cutting food miles and therefore carbon footprint. The present COVID Pandemic should teach us that to rely too heavily on food coming into the</p>

	<p>country is not sustainable both in terms of supply chain or from a climate sustainability perspective. Also when Sparsholt Agricultural College sits within our district the lack of protection to the County Farms Estate in not having this land within the Greenbelt would mean that there would no longer be a way into farming for cash-strapped young farmers therefore this route would be cut off and farming would no longer be sustainable as a career for young people in our District or country. Also the golf courses could be placed in the Greenbelt preventing the loss of land for recreational use with the promotion of well-being which has been tested to the peak during COVID and helping biodiversity within the district.</p>
C471	<p>I agree with SSWCGs view that it would force development on to brownfield and previously developed land including central Winchester, and limited in-keeping development of existing settlements, making maximum use of existing infrastructure.</p> <p>A Green Belt will emphasise the importance of the rural and historic landscapes around the historic city of Winchester.</p> <p>It would stop urban sprawl and merging of settlements. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
C475	It would force developers to look again at brownfield sites and reduce the carbon footprint
C477	Not unsure
C478	It would prevent greedy urban sprawl which is not there for the true benefit of local people. It will mean that WCC means business by keeping the climate at the centre of a decision making. It will mean that WCC can state that we want to address growth and development of the city with the climate crisis as a main driver of all decision making and will ensure that the local areas are developed thoughtfully and sensitively and in a green manner for people, wildlife and ecosystem services.
C481	<p>It would stop urban sprawl which is not there for the true benefit of local people, as housing is out of the reach of locals and will put more pressure on water resource, add to pollution and reduce biodiversity further.</p> <p>It will mean that WCC means business by keeping the climate at the centre of a decision making. It will mean that WCC can state that we want to address growth and development of the city with the climate crisis as a main driver of all decision making and will ensure that the local areas are developed thoughtfully and sensitively and in a green manner for people, wildlife and ecosystem services.</p> <p>We are facing a climate emergency. We must put the climate crisis at the heart of what we are doing.</p>

C482	It would make the maximum use of exiting infrastructure
C483	<p>It is considered that a Green Belt designation would not contribute to achieving sustainable development in the District and adjoining areas. NPPF paragraph 135 states that new Green Belt should only be established in exceptional circumstances.</p> <p>Forty percent of Winchester District is within the South Downs National Park (SDNP). At its core, the SDNP seeks to conserve and enhance the National Park, with the policies therein limiting development and preventing the coalescence of settlements. Outside of the National Park, Winchester District is protected by robust countryside policies with designated settlement gaps. Such policies prevent unsuitable development within the countryside and coalescence of settlements.</p> <p>The creation of a Green Belt within southern Winchester would put further pressure on areas outside of the Green Belt and National Park for development and could result in a requirement to build in less sustainable locations within the District. This approach does not align with growth option four.</p> <p>Furthermore, once established, the presence of a Green Belt would limit the opportunities for the allocation of developable land in years to come, resulting in less available land, less supply and ultimately higher house prices in an area which already suffers from affordability issues within the housing market.</p> <p>Sustainable development that appropriately disperses development across the District to ensure the provision of homes in the right locations can be successfully planned for within the strategic policies of the Local Plan and does not require a further layer of policy protection to achieve the same aims.</p>
C486	<p>There is constant speculative application for housing on green fields, golf courses and HCC farmland. The #onegreatwin and WCC 2020-2030 Vision consultation states that green areas should be protected and housing should be on brownfield sites identified by local people. Despite this, speculative development is a constant threat to the character of Winchester and the local neighbourhoods, with a threat to their distinct identities and is unsettling to local residents, who will not benefit from the development. A green belt would protect the character of Winchester for the future.</p>
C487	<p>A green belt will emphasise the importance of the historic rural landscapes around Winchester. Such a measure would assist in ensuring that development takes place in more appropriate areas such as brownfield land and limited in keeping development of existing settlements, making maximum use of existing infrastructure. It would</p>

	also prevent wholly inappropriate urban sprawl and the merging of settlements with destruction of both countryside and green open or recreational spaces.
C488	If a green belt wasn't created in the south, this land would be build on, rather than re-using brownfield sites in more accessible locations. In turn this would result in more property becoming vacant and not used in the central parts of Winchester. Urban redevelopment should take priority. There is currently no usable bike path from Oliver's Battery to the centre of Winchester and although a new development may contain bike paths, I can't see a usable path being created to link to the centre of Winchester, which is all off road. Residents will continue to use cars, creating more pollution. Likewise to access restaurants and going out, residents of Royaldown would also use cars as other transport methods won't be frequent enough and bike routes are either not there or too long/tough (uphill) for the return. The fields and habitat to the south of Oliver's Battery would be impacted by the proposed new road in the Royaldown development, again creating more pollution. Smaller developments on smaller plots, brownfield sites is more effective and allows residents to access local services more easily.
C490	The comment has been removed as the respondent requested their response not to be published
C491	Reducing size of "grand plan" proposals
C492	I think we need something even more radical than a green belt to prevent loss of biodiversity and acceleration of climate change
C493	A Green Belt across the south of Winchester would prevent the merger of neighbouring settlements preserving the unique historic setting of the city. The special Hampshire landscape that provides the setting for Winchester could not be replaced.
C494	A Green Belt would ensure that all other possible Brown Field sites and other previously developed sites are the focus for future development. This is much sustainable that development on greenfield sites. Only and only when ALL such sites have been utilised should any consideration be given to development on greenfield sites
C496	A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites.
C497	Truly sustainable development focusses on regenerating brown field sites and making the most of existing built up areas--even before these radical times of the pandemic, cities were struggling with declining high streets. Now, with such huge changes brought on by the pandemic, commercial businesses are re-thinking their retail and office spaces--there will be much real estate now available that was formerly used as office space, more than anyone would have ever predicted during planning in previous years. Both my and my husband's employers are radically reducing office space and changing the relationship between employees and offices. This means a significant amount OF EXISTING commercial spaces will be available to be refreshed and rejuvenated with living better and

	<p>more sustainably in mind. This may even mean that the housing demands and numbers will need to be redistributed and calculated, driven by where the infrastructure now exists. Cities like Winchester will be improved with new development, regeneration, greater density of housing/people and the investment they bring. The countryside in contrast is improved with investment in greater biodiversity and less development. If we are not careful we will fall between two stools, with average failing cities and no true countryside, just a middle ground of suburban sprawl and urban agglomeration that connects one residential area to the next and relies heavily on the motor car. Green spaces, be they productive arable fields with public footpaths or natural woods simply must be protected. Replacing them with solar panels, seedlings houses, more polluting roads and driving up the traffic and pollution and demand for more and more infrastructure is a one-way path to no true green space in our community.</p>
C498	<p>It may not, which is the whole point. We do not want massive development, lets use the Brownfield sites and renew not develop on every green space we have. A vision statement that targets - having Green spaces for the people of Winchester and South Hampshire for the next 5,000 years, no increase in development allowed only renewal on old unused or run down sites.</p>
C500	<p>I'm not sure it would.</p>
C501	<p>see above</p>
C502	<p>Make discrete not sprawling communities which can have an id entity Local Green space valuable 'lungs' so long as access allowed - especially if pandemics carry on</p>
C503	<p>The comment has been removed as the respondent requested their response not to be published</p>
C507	<p>I don't think it would. I think we need to have overarching policies to protect our open countryside and encouragement for small scale sustainable development within it</p>
C510	<p>A Green Belt would ensure that all other possible Brown Field Sites and other previously developed sites are the focus for future development. This is much more sustainable than developing Greenfield Sites. The latter should only ever be considered when all such other sites have been used.</p>
C511	<p>By definition, development of the Green Belt is not sustainable. Develop existing Brown areas more intensively if needed but note the changes in population demands following Brexit and Covid</p>
C513	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development. A Green Belt would ensure a focus on previously developed (brownfield) land,</p>

	<p>which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Repeopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.</p>
C514	<p>It would limit the availability of land for large scale development. The green belt land that we have ensures we have carbon absorption and flood planes and should not be built on.</p>
C515	<p>As acknowledged in the Consultation Document, there are stringent policy tests for introducing Green Belts. The NPPF is very clear that new Green Belts should only be established in exceptional circumstances and once established should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of Local Plans.</p> <p>Given the high policy test for introducing Green Belts and the onerous circumstances required for altering them once designated, Welbeck would promote some caution when considering designating a new Green Belt within the District.</p> <p>The NPPF is clear that any proposals for new Green Belt should set out why normal planning and development management policies would not be adequate. The existing adopted Local Plan already has a number of development management policies that seek to protect and enhance the countryside. In addition to the more general countryside protection policies, the City Council has identified a suite of 'Settlement Gaps' which help to define and retain the separate identity of settlements (a key purpose of Green Belts).</p> <p>Importantly, a new Green Belt designation would not reduce the requirement for housing or other development within the District. As acknowledged within the Consultation document around 40% of the district is within the South Downs National Park which is already afforded the highest level of landscape protection. Therefore,</p>

	<p>Welbeck consider that the designation of a new Green Belt within what is acknowledged to be an already constrained District would severely impinge upon the ability of WCC to proactively plan for development within the most sustainable locations not just within this local plan period but beyond. This could result in future development being directed to the less sustainable part of the District because it simply has less policy constraints, this isn't sustainable or positive planning as advocated by the NPPF which seeks to locate new development close to existing growth.</p>
C516	<p>Any land allocated as a 'Green belt' must be sustainably managed for maximum carbon capture and maximum biodiversity and production. It should also be accessible for the public and managed for mixed recreation – walking, cycling, community farms, ponds etc.</p>
C517	<p>Encourage development of brownfield sites Encourage re-development of the declining city centre - current plans lack vision &amp; creative thinking to address the change in demand for use.</p>
C521	<p>Green Belts have been effective around the world in mediating urban sprawl and growth driven from the supply side. Without some form of regulation and control (the South Downs National Park is a good example) the Winchester area is likely to become an urban sprawl. this will detract from its heritage aspect, its desirability as a destination for tourists, and the quality of life it offers to its citizens.</p> <p>'Sustainable Development' need not be thought of as 'Sustainable Growth'. There is no logic in growth in itself as a desirable outcome. This fundamental economic truth seems to get lost in many plans such as this.</p>
C523	<p>It would be about preserving the character of our district, not sustainability, which is a Trojan Horse for control of energy</p>
<b>C525</b>	<p>The comment has been removed as the respondent requested their response not to be published</p>
C529	<p>Green Belt should be Green Belt ie the objective for it is a natural environment. Currently developed areas should find their own solutions within their boundaries.</p>
C530	<p>It would help supress large housing proposals that are submitted purely for profit reasons that keep recurring even when previously rejected and which will doubtless trigger legal challenge again if rejected in any update to the local plan.</p>
C533	<p>Sustainable Development is not one of the five purposes of the Green Belt and should not be used alone to justify making new Green Belt Designations. Paragraph 134 states that the Green Belt should serve the following five purposes: a) to check the unrestricted sprawl of large built-up areas;</p>

	<p>b) to prevent neighbouring towns merging into one another;  c) to assist in safeguarding the countryside from encroachment;  d) to preserve the setting and special character of historic towns; and  e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.</p> <p>There are other policies within the NPPF (stemming from Section 2, although Sustainable Development acts as a golden thread throughout the Framework as a whole) and available to the LPA (supported by NPPF para 16a) through the Local Plan to promote and deliver sustainable development.</p>
<b>C534</b>	The comment has been removed as the respondent requested their response not to be published
C535	Any land allocated as a 'Green Belt' must be sustainably managed for maximum carbon capture and maximum biodiversity and production. It should contain fruit trees and should also be accessible for the public and managed for mixed recreation – walking, cycling, community farms, ponds etc
C537	It will force existing brownfield spaces to be used for development. This in turn will push people to use sustainable transport methods (walking, buses etc) that are more economic in built up areas, and reduce the use of private vehicles.
C538	it would protect surrounding villages and ensure they are not swallowed up into the main city.
C539	Why should it? Sometimes the best sustainable option is NO DEVELOPMENT.
C540	<p>We consider that a Green Belt designation would be contrary to achieving sustainable development. Paragraph 7 of the NPPF states that "the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs". The introduction of an unnecessary Green Belt designation would stifle the delivery of new development in sustainable locations close to existing settlements, thereby denying the needs of the present and future generations for housing and jobs.</p> <p>Paragraph 135 of the NPPF goes on to set out five strategic Local Plan policy requirements which new Green Belt designations should adhere to and each of these is considered further below, in the case of Winchester District and adjoining areas.</p> <p>a) demonstrate why normal planning and development management policies would not be adequate - Normal planning policies preventing inappropriate development in the countryside exist as part of the current Local Plan and its predecessors. These policies include Policy MTRA 4 - 'Development in the Countryside' and Policy CP18 -</p>

	<p>'Settlement Gaps' of the Local Plan Part 1 Joint Core Strategy. Such policies have been operating effectively in preventing non-essential development in the countryside and retaining the generally open and undeveloped nature of the defined settlement gaps. Any major development has resulted from the controlled release of land in sustainable locations primarily through allocating sites for development as part of the Local Plan preparation process. This process is working effectively and there is no need for a Green Belt designation.</p> <p>b) set out whether any major changes in circumstances have made the adoption of this exceptional measure necessary - As set out above, the small increase in the District's housing requirement of 75 dwellings per annum over the current Local Plan provision does not constitute an 'exceptional circumstance' and can be accommodated through the controlled release of allocations at Winchester and the market towns and the larger villages. Even if the housing requirement were to increase we do not consider that a Green Belt is required or justified.</p> <p>c) show what the consequences of the proposal would be for sustainable development - The consequences of the proposal would be to unnecessarily stifle the delivery of new development in sustainable locations close to existing settlements, thereby denying the needs of the present and future generations for housing and jobs.</p> <p>d) demonstrate the necessity for the Green Belt and its consistency with strategic policies for adjoining areas - Whilst it is understood that the Partnership for South Hampshire (PfSH) is considering the implications of a Green Belt designation across the wider area, no local authority in this area has a Green Belt designation within its Local Plan. Given that PfSH's website states that it is "committed to long term, managed and conditional economic growth and regeneration and to the delivery of the housing, infrastructure, facilities and services necessary to achieve it" it would appear to be contrary to it's aims to support a Green Belt designation which would unduly restrict sustainable development.</p> <p>e) show how the Green Belt would meet the other objectives of the Framework - Whilst we acknowledge that a Green Belt designation would in part help meet the environmental objectives of the NPPF, these benefits would not outweigh the negative social and economic impacts such as restricting access to homes and jobs in the settlements where they are needed.</p>
C543	Hopefully a Green Belt would encourage more sustainable development via well thought out in-fill developments rather than large spreading major developer style estates.
C546	By encouraging development of existing brown field sites first.

C548	By protecting the natural and historic environment and to making effective use of land by only allowing development within Winchester's existing boundaries.
C549	It should encourage sustainable farming practices, biodiversity protection, wildlife movement and enjoyment of the countryside. All should benefit human and animal wellbeing.
C550	Densification of development in existing build-up areas
C552	Reducing the absolute number of new homes, cars etc etc would reduce the resultant increase in carbon emissions which, in itself, would make the objective of carbon neutrality more difficult to achieve.
C554	It would prevent proposals such as 'Royaldown' which will destroy our countryside (not sustainable long term if this is the way forward) and although 'Royaldown' purports to be sustainable, it involves a lot of new infrastructure and residences which will be reliant on a private car for access to the M3 and A34. If you create more infrastructure people use it and it creates more carbon emission. Better to use the existing infrastructure within the villages for smaller developments which makes better use, restricts use and enables the villages to be viable places to live.
C555	There is no other protection available if strategic gap is ignored by planners and developers.
C558	A Green Belt would ensure a focus on brownfield land, which is much more sustainable than development on greenfield sites.
C562	A Green Belt would ensure a focus on brownfield land first, including town centres, which is much more sustainable than development on greenfield sites.
C563	Restrict development and prevent continuous sprawl
C564	The comment has been removed as the respondent requested their response not to be published
C566	Development in the countryside should be small and appropriate to the locality.
C567	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative,</p>

	<p>sustainable approach for WCC to take - good for residents, good for business and good for tourism.                  A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary</p>
C568	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. C569	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand.</p> <p>Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism.                  A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary</p>
C573	<p>Sustainable development is about appropriate buildings in appropriate places. In other areas I have witnessed building on floodplains and many residents complaining when their houses are under water yet again. How is that</p>

	<p>sustainable if more concrete is being poured in to solve a problem only created by building in the first place? Sustainable development is about a mix of housing working with the community it is in- social and privately owned that means communities can thrive. This means people and nature. Winchester seems to be full of areas that are aimed at those with money moving out of London or similar. It would force use of brownfield sites before using those that are easier to develop because there is nothing to remove first.</p>
C574	<p>To get sustainable development the developers must be made to pay up-front for the environmental measures they are required to make, too often they get permission, start building and then say oh we can't afford the environmental stuff, or go bankrupt.</p>
C576	<p>It just needs to be strongly upheld. Therefore allowing adjoining districts and areas to breathe fresh air -literally. The pandemic has proved we need these places.</p>
C577	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development. A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. Re-peopling the centre of the city would be a sustainable way forward, as would looking again at Bushfield Camp, a brownfield site, where low-rise innovative affordable housing could be built, within the immediate boundaries of the city, with transport links and shops close to hand. Recognising the importance of the green landscapes around the historic city of Winchester would be an innovative, sustainable approach for WCC to take - good for residents, good for business and good for tourism. A new Local Plan enables a forward thinking authority to make a positive re-evaluation of the notion that valuing and protecting the land is not at odds with sustainable development, quite the contrary.</p>
C579	<p>There are proposals to put development where it is not sustainable. If you look at all the sustainability proposals you have put forward in your plan (earlier in this consultation) then the question is answered. You cannot do all that, without protecting some space for a green belt.</p>
C580	<p>see comments above</p>
C584	<p>It would not. The South Downs National Park should be our greatest protection and the best way to achieve that would be to remove all planning decisions for SDNP away from Winchester City Council.</p>
C586	<p>I am keen to see a distinctiveness to the Winchester district. I do not want to see the 'edges blurred' further to north or south.</p>

C588	A new Green Belt to cover land south west of Winchester Town and protect both the rural Parishes and the shape and setting of Winchester Town would stop urban sprawl and merging of settlements. It would force more development onto PDL including Winchester Town Centre, plus allow limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure.
C589	We need wildlife and it needs somewhere to go. We are seeing more of deer near our houses because of pressure on their loss of habitat, for example.
C593	see above; it would not.
C595	The comment has been removed as the respondent requested their response not to be published
C596	A Green Belt here would protect this southern area from urban sprawl and not jeopardize the sustainability of Winchester's Local Plan. Focus on regenerating brownfield sites within Winchester's existing built up area and nearer the city centre would ensure development is more sustainable .
C597	Please see representations made to Planning Policy, submitted in PDF form.
C602	It wouldn't.
C603	<p>A Green Belt designation would effectively prevent large speculative developments such as Royaldown, which, contrary to its own publicity, will be car based and consequently negate any other potential contributions to sustainable development.</p> <p>A Green Belt would ensure a focus on previously developed (brownfield) land, which is significantly more sustainable than development on greenfield sites, for the re-development and re-invigoration of the centre of Winchester, in particular, with the aim of including more housing, for older and younger people, together with developments of WCC affordable rented properties. **38 Letter responses relating to biodiversity and the natural environment**

Letter Respondent ID	Comment
L6	<p><b>The Hampshire Green Belt</b></p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.”</p> <p>We urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E187	<p><b>The Hampshire Green Belt</b></p> <p>A new <b>Green Belt</b> would cover land to the south and south-west of Winchester City and protect the rural parishes of Hursley and Compton and the shape and setting of Winchester. It would stop the urban sprawl and the merging of settlements, thus forcing development onto brownfield and previously developed land - including the Sir John Moore Barracks and the City centre - thus maximising use of existing infrastructure.</p> <p>The large speculative development of <b>Royaldown</b> cannot be allowed to skew the carefully considered (and</p>

	<p>updated)                  Local Plan content, as the use of this prime open downland space for a massive car-based development that does not represent any form of sustainable development, is an affront to the values of proper consultation. The use of very large areas of land to the north of the A3090 between Standon and Pitt for a traditional sprawling solar farm to serve the new Royaldown development is a visual affront to a truly beautiful area.</p> <p><b>“You don’t know what you’ve got till its gone!” Jodi Mitchell</b></p>
L10	<p><b>The Hampshire Green Belt</b></p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>

C267	<p>Winchester is a beautiful area, and we need to maintain it. By building on greenfield sites, we will not only damage the environment and increase pollution, but we lose what little beautiful greenfield areas we still have.</p> <p>Building new settlements on greenfield areas will increase pollution and CO2, when existing brownfield sites and normal local house builds can be utilised first.</p> <p>The plan will be in place for a long time, and we need to ensure the environment is protected for the next generation. How is removing green areas a demonstration of a pro environment, reducing carbon, government and council policy?</p> <p>Please use the brown sites for large developments to minimise environmental impact, with small sustainable developments in existing areas, only.</p>
L12	<p><i>We believe that an additional 5th option should be added, to include;</i></p> <p><i>"the promotion of brownfield development first together with a protective Green Belt."</i></p>

L13	<p>I agree that new homes are needed but there is a National Ambition to protect the Environment and building towns on Greenfield Sites is not going to help achieve this ambition.</p> <p>A local example is the proposed New Town of up to 8,300 houses on a Greenfield Site between Basingstoke and Winchester which would destroy a large environmental zone between two built up areas.</p>
L14	<p>Our need for a Green Belt around Winchester is a must. To destroy this amount of green countryside is a very bad proposal.</p>

L15	<p>We would like the land at "Five Oaks Farm" Shedfield SO32 2HS to be designated as a Local Green Space in the Winchester District Local Plan 2018-2038. Because I believe it has beauty, historic significance, recreational value, tranquility, and rich wildlife and is an important settlement gap to the communities of "Shedfield Parish".</p>
L16	<p><u>Five Oaks Farm Quarry</u></p> <p>We would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a local Green Space in the Winchester District <sup>local</sup> Plan 2018-2038, because we believe it has beauty, historic significance, recreational value, tranquility, and rich wildlife and is an important settlement gap to the communities of Shedfield Parish.</p>

<p>L17</p>	<p><b>The Hampshire Green Belt</b></p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
<p>L19</p>	<p><i>I protest strongly against this disastrous plan. Have we, in Waltham Chase, not already lost too much countryside, fields, meadows, trees, hedges not to mention Wildlife?</i></p> <p><i>I would like the land at Five Oaks Farm, Stedfield designated as a local Green Space — for future residents.</i></p> <p><i>With my family I moved here 40 years ago to a perfect, quiet, beautiful locale. !!SOLUTIONS</i></p>

L20	<p><b>The Hampshire Green Belt</b></p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
L21	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>
L22	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>
L23	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>

L24	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>
L26	<p style="text-align: center;"><b>RECEIVED</b></p> <p>I would like the land at <u>FIVE OAKS FARM</u>, <u>SHEDFIELD SO32 2HS</u>, to be designated as a <u>LOCAL GREEN SPACE</u> in the Winchester District Local Plan 2018 - 2038 because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wild life and is an important settlement gap to the communities of Shedfield Parish</p>

L29	<p>10: Do you agree or disagree with the following statements?</p> <p>10a: <i>"Where biodiversity net gain cannot be provided on-site, it should be allowable to offset this by enhancing biodiversity off site"</i></p> <p>(Strongly agree/ agree/ neither agree nor disagree/ disagree/ strongly disagree)</p> <p>10b: <i>"We should allocate land specifically for open space or for biodiversity net gain, to provide opportunities for off-site mitigation of the effects of new development"</i></p> <p>(Strongly agree/ agree/ neither agree nor disagree/ disagree/ strongly disagree)</p> <p>10c: <i>"Current development management policies for the protection of the countryside are adequate"</i></p> <p>(Strongly agree/ agree/ neither agree nor disagree/ disagree/ strongly disagree)</p> <p>If you disagree with the previous statement, please explain your reasons and your view on what new policy measures should be adopted.</p> <p>If land is built on it's GONE;no matter wht else you may do in the way of "re-allocating" other land or whatever</p>
-----	---

<p>L30</p>	<p>I'm objecting to option 3 of the local plan. I live in Hinton near the river Dever and Michel Dever and I'm objecting because if you build houses on option 3 you will kill natural wildlife and ruin the beauty of Michel Dever.</p> <p>I have a lot of times been walking through Michel Dever and seen rare and common creatures like herons, egrets, gooses, yellow hamers, kestrels, red kites, roe deer and many more who build nests and dens as well as just stopping in fields and hedgerows. If you take away that habitat and replace it with busy streets and construction sites it will destroy the homes and in some cases the animals of who depend on the landscape as it is now to live.</p>
<p>L31</p>	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>

L32	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 -2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>
L33	<p>I would like the land at FIVE OAKS FARM, SHEDFIELD, SO32 2HS, TO BE designated as a LOCAL GREEN SPACE IN THE WINCHESTER DISTRICT LOCAL PLAN 2018-2038, because I believe it has beauty, historic significance recreational value, Tranquillity and rich wild life and is an important settlement gap to the communities of Shedfield Parish.</p>
L34	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>

L35	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 -2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.
L36	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.
L37	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.
L38	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.
L39	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.

L40	I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.
-----	---

E1221	<p><b>Issue 2. Biodiversity and National environment</b></p> <p>1. Do you agree or disagree with the following statements? Where biodiversity net gain cannot be provided on-site, it should be allowable to offset this by enhancing biodiversity off site.</p> <p><b>Our response</b> - Strongly disagree We should allocate land specifically for open space or for biodiversity net gain to provide opportunities for off-site mitigation of the effects of new development.</p> <p><b>Our response</b> - agree We should allocate land specifically for open space Where council has no choice but to allow a development to meet housing allocation need then the answer is yes but it must be provided elsewhere if it can't be on site. Off-setting should not be allowed for individual development.</p> <p>2. Do you agree or disagree with the following statement? Current development management policies for the protection of the countryside are adequate?</p> <p><b>Our response</b> - Disagree - Policies are not sufficiently well defined and can be used at officers' discretion. Officers routinely fail to take account of Local Councils viewpoints or the VDS.</p> <p>3. Do you think a new Green Belt is need in the south or north of the district?</p> <p><b>Our response</b> - Yes If so what changes in circumstances makes this 'exceptional measure' necessary?</p> <p><b>Our response</b> To protect the rural areas in both the South and Northern part of the district and avoid rogue planning decisions. How would Green Belt designation contribute to achieving sustainable development in the district and adjoining areas?</p> <p><b>Our response</b> - By primarily focusing on Brownfield sites subject to evaluation/consideration of infrastructure, residential/public amenity and the existing character/way of life in the local area.</p>
-------	--

<p>L43</p>	<p>I would like the land at Five Oaks Farm, Shedfield SO32 2HS to be designated as a Local Green Space because I believe it has recreational value, tranquility and is a rich wildlife area, and should be an important settlement gap, for village people to enjoy. Please do not destroy another green space in our village. Enough is enough!!!</p>
<p>L44</p>	<p><b>PLEASE ACT AS SOON AS POSSIBLE. TO MAKE THIS HAPPEN YOU CAN DO ONE OF THE FOLLOWING.</b></p> <p>1. You can simply write <b>with your name and address</b> to Winchester by email, or by post, to say –  <b>'I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018-2038, because I believe it has beauty, historic significance, recreational value, tranquility, and rich wildlife and is an important settlement gap to the communities of Shedfield Parish'</b>; you can send this to</p>
<p>L45</p>	<p><b>'I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018-2038, because I believe it has beauty, historic significance, recreational value, tranquility, and rich wildlife and is an important settlement gap to the communities of Shedfield Parish'</b>; you can send this <del>Business C</del></p>

L46	<p>I would like the land at Five Oaks Farm, Shedfield, SO32 2HS, to be designated as a Local Green Space in the Winchester District Local Plan 2018 - 2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield parish.</p>
L48	<ul style="list-style-type: none"> <li>(1) It is estimated that this development will create an additional 25,000 traffic movements every day. The road system in the western side of Winchester is already heavily clogged up for much of the day. This additional traffic will create grid-lock.</li> <li>(2) Working on an occupancy of 3 per household, Royaldown will bring 15000 additional residents to a city where the medical provision is already at full stretch. Schools and colleges are similar.</li> <li>(3) The natural green break which currently exists between the city and Hursley will be gone. With the rate that Chandlersford is being developed, there will be an urban sprawl from Southampton to Kingsworthy.</li> <li>(4) Why has the disused Bushfield camp site not been developed? This would provide a smaller site with better road links, being close to the M3. I'm sure the perceived problems with this site can be overcome, and it's potential maximised.</li> </ul>

L49	<p>Dear Sirs - It is vital that we retain a "green lung". Brownfield <del>areas</del> areas should be put to use, not destroy the natural amenities which are highly regarded &amp; much used. This development would see a huge area of precious downland go under bricks &amp; mortar where special species of plants &amp; insects thrive &amp; provide habitat for breeding birds &amp; animals -</p>
L51	<p><b>The Hampshire Green Belt</b></p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brown field and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>

L53	<p><b>The Hampshire Green Belt</b>                  A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. M1	 <p>Crankie Cratinus-Madame                  Rebecca Skidmore yes green space is very important but people want attractive well maintained spaces, not neglected “rewilded” dumping grounds (that’s what they turn into) which quickly get out of control and affect everything else around. There’s a place for that sort of thing and it certainly isn’t in the city centre.</p> <p>Like · Reply · Message · 5 d</p>
M6	 <p>Matt Carolan                  We had open spaces and farmland until you built on it 🏠🏠🏠</p>
M7	 <p>Dave Cooper                  Of course we value our open spaces its you that don't you have no respect for the greenbelt.</p> <p>Like · Reply · Message · 1 w</p>

**34 Have Your Say poll responses relating to biodiversity and the natural environment**

Respondent ID	Comments
H9	Carbon neutrality is vital to combating climate change but it is not the only environmental issue that will affect the future of the planet - the alarming decrease in biodiversity (in terms of species and ecosystems) is not only driven by climate change but also by human activity (e.g. building). A report by the WWF shows that global animal populations have declined by 68% since 1970. If keystone species start disappearing (due to human activity unrelated to climate change) this will have a devastating impact on human life (e.g. decline in bees). Carbon neutrality is not enough on its own to save the planet as we know it today. We must do more to conserve the environment.
H12	Please focus developments on brownfield sites and more intelligent use of current town and city centre spaces for residential properties. Greenfield sites need to be preserved. They are a crucial part of our heritage, support the economy through valuable food production (increasingly important, following our exit from the European Union), and are important havens of wildlife and biodiversity.

<b>E156</b>	This local plan is a great initiative :-). As we continue to see considerable portions of Hampshire's green belt built on, we need to be smarter on using the brownfield plots to meet the conservation ambitions of this plan. We need to be true to this plan.
<b>H19</b>	This local plan is a great initiative :-). As we continue to see considerable portions of Hampshire's green belt built on, we need to be smarter on using the brownfield plots to meet the conservation ambitions of this plan. We need to be true to this plan.
<b>C3</b>	Biodiversity is a high-value goal for the local plan and of major significance to local residents - one of the central aspects that should be further investigated is the implementation of landscape-scale wildlife corridors through the creation of a new AONB north of Winchester. The Winchester area has the South Downs National Park to the south-east and the North Wessex Downs AONB lie just to the north. There is a (relatively) small area of undesignated but environmentally vital land lying between these two protected areas. Its lack of designation means this area is consequently hugely threatened by development, putting at risk a vitally important chalk downland landscape and several internationally significant and unique chalkstream river habitats. The downland landscape between Overton to the north, Salisbury to the west, the Candover Valley to the east and Winchester to the south is absolutely essential to the character of the area, and provides a vital wildlife link between one AONB to the north and the national park to the south. Linking these two, whether by an extension of the North Wessex AONB, creating a new AONB in its own right or as an extension to the national park, would be a genuine support to the council's biodiversity goals and provide an uninterrupted and protected landscape-scale wildlife corridor running from Brighton and the south coast all the way up to Bedfordshire in the north and Devizes in the west. Council support for a new AONB north of Winchester is a total no-brainer in biodiversity terms.
<b>H24</b>	I want to ensure that the natural environment is protected and any development is done with real caution of environmental impact. I.e. water drainage and wildlife diversity. Also that any development that does go ahead has the infrastructure to support the surplus population.
<b>H29</b>	There is too much development of housing on green sites with Barton Farm in progress and the threat of RoyalDown destroying key areas of natural and beautiful landscapes. There is plenty of scope for brown sites to be developed. There is the added effect that the precedent of new isolated green sites create gaps that are then filled, creating city sprawl; before we know it Winchester will be joined to c/Ford and the sprawl that is towards Southampton. Instead the Council plan should look at the value of extending the Southdown park encompassing these green areas around Winchester to preserve and enhance the value of the area driving a different economic plan..

<b>H37</b>	I would like to send you two reports that I have written firstly, on the Ecology and Environment of Flowerdown and secondly and arising from the first a report on Flowerdown Brownfield and non-Brownfield/Greenfield areas that could be developed to support the data provided in my first report. I believe that there are considerable environmental/recreational benefits to Winchester in protecting a good deal of the Flowerdown MoD estate a smaller part of which is occupied by Sir John Moore Barracks. I would like to see these ideas incorporated into the emerging Local Plan.
<b>C119</b>	Winchester needs a green belt to protect the environment in which the people of Winchester and surrounding areas live - which in turn protects their mental health and general wellbeing. The local plan needs to ensure that the character of Winchester cannot be destroyed by large scale joined on developments and the destruction of the surrounding countryside.
<b>H49</b>	Very difficult to select from categories available, given they are clearly all important. This has also so far been very much a standout year, where individuals' priorities have changed substantially, but we of course need to focus on our way out of the pandemic, and therefore seek a hybrid plan that satisfies our priorities pre lockdown 1, and into a slightly different future to the one we previously planned for. Certainly, I would like to see a greater number of sustainability approaches to the local plan (1) analysis on water and waste (2) affordable green energy sources for homes, street & Christmas lighting, schools, shops, restaurants, and construction (3) reduction in traffic by encouraging as many people living in Alresford to leave their cars behind and walk to the Alresford shops and restaurants, as well as to purchase locally-sourced produce - ensuring that local business rates are suitable and that local businesses are sustainable and can grow (4) greater focus on promoting health in the community - outdoor exercise, diet and promotion of preventative health. We have a number of locally-sourced ingredients, fabulous outdoor park and countryside spaces. Three of the key known risks to becoming ill from Covid 19 have been Age, Obesity and Diabetes, so focussing on the 'Living Well' aspects are enormously important - ensuring outdoor recreation spaces including the vast network of countryside trails, outdoor gyms, healthcare infrastructure, additional cycle rack spaces, affordable access to local technology and facilities.
<b>H55</b>	Overall a very good idea. Just noticed there is a SHELAA site just over the road from us at SO22 5JP. What we really don't need is more development on greenfield sites. The whole reason we live here is proximity to the green spaces, please do not jeopardize these in any way. Its a joy living in this area and the council need to defend that
<b>C75</b>	It is important that we preserve the reasons why many of us choose to live in the Winchester area. Green spaces, clean air, a historic, vibrant and interesting city centre, not just an overdeveloped soulless conurbation. E.g. Basingstoke. However times are changing and the City centre needs to be redeveloped to reflect the future not the past. More homes in the centre area, better green transport links to the outlying area and housing developments in

	the Winchester area need to be cohesive communities, not just bolted on to existing places or just Winchester expansion
<b>H59</b>	Any developments should include the requirements of wildlife and also homes should be built with eco features and be ethical for the future of the planet
<b>H61</b>	The Plan needs to be focussed on climate change and its implications and risks for life (water and clean air). Everything else, the environmental damage and pollution we cause, the case for higher density, but better, housing, sustainable, shock mitigated power sources, green transport, and well being needs to fit under this overall issue and is one that the nation as a whole must address. What we have seen in the last year regarding CoViD and the lives lost will likely be low compared to the damage human induced climate change will cause (and is already causing).
<b>C29</b>	Please do more to protect chalkstreams and local rivers from excessive extraction and pollution, including storming
<b>H72</b>	Developing new housing is important but Winchester also needs its green lungs. Whenever a new development is created then a large, green, wild space needs to be left between existing and new houses. And not just a bland, manicured park with minimal biodiversity but proper 'dog walking' space that is left to rewild
<b>C404</b>	I would like to ensure that green spaces are preserved and that any new plans for development look to use the brown field sites before considering our greenspaces which are so important both for the community who live here but also for the environment. any plans for new development should also look to preserve the city boundary and prevent urban sprawl which would be catastrophic for the city
<b>C588</b>	I believe there is a small ancient woodland between Compton Street and Hurdle Way, this does not appear on your map at all why is that? This woodland extends as a corridor from Compton and Hurdle Way to Yew Hill and Olivers Battery via native hedgerow along the field edges and tree lined avenue. If we are going to have a planet for our children then keeping our green, biodiverse, ancient woodland and ancient hedgerow spaces is critical to any local planning.
<b>H90</b>	There is already enough planning around this area without building on a beautiful green area with wild life and sky larks nesting on the field.
<b>H91</b>	More green and open spaces are required. Far too much housing development already so convert office blocks instead which are currently being unused and will continue to do so in the changing face of the workplace. The historic City of Winchester does not have the infrastructure to cope with thousands more homes. Stopping illegal immigration should be the first step.
<b>E990</b>	I feel very strongly that the proposed development of 5000 homes south of Winchester should not go ahead. It is terrible to use good agricultural land for housing. The huge Barton farm development needs to be absorbed before

	our beautiful city is swamped by another even larger development. Greater effort should be made to make use of brownfield sites.
<b>H93</b>	How do we ensure that large development of housing is stopped in Winchester and the surrounding areas. We must preserve our green spaces and ensure the beautiful place we live in is secured for generations. Please help stop them building on vast areas of this county. It is not about affordable homes it is about them making money and it needs to stop.
<b>H98</b>	I am very concerned about the blight of new housing estates. I would like to know how many people have been taken out of renting and what level of debt they have incurred, including the impact of government loan schemes. Many of the houses are too small meaning that first time buyers will soon wish to move on. But will they be able to afford to? Are any data available? I am also concerned about habitat, and subsequent biodiversity, loss in our area. Large hedgerows bordering low quality farm land are ripped up for new houses without a proper ecological assessment. Once lost these are gone forever. Finally the visual eyesores of many equestrian facilities needs much closer control. Caravans should not be permitted to be placed in the corners of fields, especially whilst there is no protection from the weather for the poor horses. Many of these fields look like some shanty town littered with debris. On the positive side, the way you are managing this consultation is excellent.
<b>H99</b>	The loss of biodiversity and climate change are the most pressing issues of our time. The imperative of addressing these must be central to the new Plan, and given paramount importance. Other considerations (including housing and the economy) are also important, but should not compromise progress to reverse the disastrous trajectory of loss of biodiversity and climate change.
<b>H102</b>	I am concerned about the possible auction of the Davis Kickabout area in Badger Farm because of the huge importance of green spaces in Winchester's housing estates and public areas. ( as 39% of people appear to agree with in your survey )
<b>C164</b>	Please maintain the environment. We need more houses, but we have brown fields and existing developed land to build on first. we need to increase green spaces, not remove it. Please do not build on green field areas.

<b>H108</b>	<p>I am writing particularly in regard of the importance of preventing any housing development on the site of South Winchester Golf Course. There are a number of reasons why I believe it is important that we maintain these valuable green spaces.</p> <ol style="list-style-type: none"><li>1. We need to maintain a green belt around Winchester and not allow a sprawling conurbation.</li><li>2. It is important that such habitats are preserved for our precious wildlife. The following species are to be found at the golf course. Buzzards, Sky Larks, King Fishers, Sand Wasps, Bee Orchids plus many more.</li><li>3. We are all encouraged to take recreation and exercise. SWGC has in excess of 700 members. The golf course provides an excellent form of exercise ( a round of golf will provide at least 10,000 steps). It is also an excellent place for people to socialise with the added benefit of providing support for one another both in terms of the aging population ( as we all know loneliness has become an increasing concern) together with peoples mental wellbeing.</li><li>4. SWGC provides jobs to the local community</li><li>5. Since SWGC was founded in 1993 it has raised in excess of £1.25million for various charities.</li><li>6. Winchester has a limited number of green spaces for the purpose of recreation for what is going to become an ever increasing population. It is therefore illogical to allow this site to become a site designated for possible housing when we will require more such spaces not less. We all need to exercise, socialise, receive both support in an aging population and one that has become mentally more vulnerable. Golf courses provide an excellent community hub. We are all encouraged to look after one another and over the last 23 years that I have been a member of SWGC I can honestly say that the golf club has very much become my second home. I live on my own, I am 55 years old, I have an underlying health condition and I can honestly say that being a member of such a club has been a life saver.</li><li>7. Finally I am very much of the view that the focus for providing new housing should primarily look at the redevelopment of brown field sites and to encourage the regeneration of the increasing decline in retail in our towns and cities. Over the years it has become far to an easy option to destroy swathes of our precious green spaces rather than considering the environmentally friendly options.</li></ol>
-------------	---

<b>H109</b>	Concerns: Green field house building, urban sprawl. Unregulated development in the countryside. Investing in: Biodiversity schemes, nutrient neutrality and river protection, sewage management in rural villages, proper flood support to rural communities, robust enforcement of planning regulations, green belt for Hampshire, Brown field housing development, inner city housing regeneration schemes. Green space investment, village greening schemes, tree planting, wildflower corridors, greater tree protection / retention schemes for private gardens and public places.
<b>H116</b>	I am against Royal Down. I think we should be making better use of brownfield sites rather than building on pristine countryside. The Barton Farm development is a total eyesore and has taken up valuable open space. I would like to see redevelopment of areas like Highcliffe building up rather than sprawling out, we will never get this land back! In terms of sustainable transport, I would like to see more integration of developments and the built area into the public rights of way network, with better access for cyclists, there are many paths out there that are only footpath, where you could easily ride a bike. More green space in the city would be an improvement. More protection of for nature and conservation sites too.
<b>C317</b>	Further large housing developments are devastating for local environment and transport.
<b>H124</b>	I have been s resident in the Winchester District for nearly 5 years and become familiar with the problems and challenges of the area, but also become very familiar with the district's assets. These assets such as the beautiful landscapes, natural habitats and wildlife, biodiversity, and historical sites in the surrounding parishes of Winchester are gravely threatened by housing projects that will damage and destroy these assets, in particular the Royal down housing project. The local and wider impact of such a development must be taken seriously, and brown field sites must be prioritised, not our wonderful countryside and iconic and historic villages
<b>C474</b>	Please keep me updated with Local Plan developments. I recognise how important it is for housing developments in the area, however these decisions can be damaging and divisive amongst communities. I hope that the Local Plan will protect our countryside habitats and protect agricultural land, when in this day we must aim to support local farming. CR04 Land at Newlands, Crawley 76 Houses CR01 Land fronting Hacks Lane, Crawley 48 Houses I write in relation to the Local Plan and to provide my opinion on the above two locations, which are included in the Strategic Housing and Economic Land Availability Assessment (SHELAA) document. With regards to both sites and the potential number of houses, the impact would be first and foremost, out of character, out of scale and overbearing for Crawley. Crawley is a quintessential village surrounded by countryside and agriculture. It has a strong history and is maintained to preserve its heritage, by a community of likeminded people. Developments on

either of these suggested sites would have a negative impact on the appearance and character of the village and would be strongly objected to. To lose the agricultural land to a housing development would negatively impact the open aspect of the neighbourhood. The loss of existing views from the local properties on Hacks Lane (CR04) would adversely affect the neighbouring owners and the public who enjoy the local walks. Whilst it is appreciated that loss of view on legal terms is not enforceable, it must be recognised and not disregarded that the enjoyment of the view is an integral part of the amenity of the neighbouring properties. This coupled with noise disturbance, light pollution from houses, loss of privacy, increased population and vehicle density would all affect the character and heritage of Crawley, regardless of the standard of design, if it were pursued. In addition, there are obvious concerns for the wildlife and habitats if these sites were to be developed. Both sites are a vibrant piece of the countryside with many species of birds and mammals present including hare, hedgehogs and deer. There is also a pond at the end of Hacks Lane which supports many of the species, this ecosystem should not be at risk from development.

Crawley Village enjoys a close relationship with Arqiva which recognises the value of the Village and its layout and limitations. Arqiva employees must enter the site from the Stockbridge Road end of the Village and not drive through the centre of Crawley, due to its narrow through road. It is recognised that the level of traffic currently through Crawley can be difficult to negotiate when considering parked cars, deliveries to the Fox Public House, the bus service, bin collection, school buses etc. To potentially add 100 – 150 cars to these already, limited routes would cause issues. Hacks Lane itself is a no-through road and narrow in places, whereby only one car can pass at a time. The recreation ground which includes the cricket club and playground are accessed via Hacks Lane and any increase in vehicular movement will be damaging to the younger generation and pedestrians of Crawley who enjoy these villages amenities. To conclude, the above two potential sites in Crawley should not be developed. Crawley is nearly devoid of local amenities and it would not be suitable to support an increased population. Vehicular access is under extreme pressure and the heritage of the village would be put at risk if developments were pursued.

<b>H128</b>	<p>The plan is very Winchester town centre centric. Needs to be more about how to help villages can thrive. Also more policies to protect the open countryside around villages. Villages should be kept as separate communities and not merge into each other or Winchester. Whilst we all want to live in a more carbon neutral way, villagers are dependent on cars and there is a great deal in the Plan that looks anti-car. Electric car use is growing, plan needs to recognise this. More people would cycle if the roads were safer. WCC district needs a better cycle and footpath network - when was the last time footpath needs were looked at. I cannot walk or cycle to Winchester safely from Northwood Park, near Sparsholt? More recreational space required in Winchester, existing parks are now very busy post covid and car parks full to access them. Plan needs to make sure developers adhere to rules and put plan to go for zero carbon neutrality as part of any new development. High Street needs more thought. Winchester does not need more shops, but to build back better and attract a wider variety of retail. How can WCC incentivise more independent shops to come here. Make it a destination, not just another identikit high street that could be anywhere.</p>
<b>H133</b>	<p>I am very pleased to see the council working towards carbon neutrality and increasing biodiversity. The needs of future generations should be a priority in all plans i.e. ensuring we leave the environment in a better state  <a href="https://www.futuregenerations.wales/about-us/future-generations-act/">https://www.futuregenerations.wales/about-us/future-generations-act/</a></p>

### 80 Email responses relating to biodiversity and the natural environment

<b>Respondent ID</b>	<b>Email comments</b>
E186	<p>I have been trying to work my way through the "Your Place, Your Plan" website, but I have to say it doesn't feel like you are making this about me or anyone else in the local area. You have clearly spent a lot of money on the website, which is full of pictures of happy, smiling people. However, it is very difficult to find any meaningful information about the four approaches that you are considering.</p> <p>It was only as a result of persistence that I found the consultation download document and eventually got to some information about the options from page 39. However, I didn't find any maps until I got to the SHELAA appendices in a different section entirely. All of this has left me feeling ill at ease.</p> <p>I recognise the need for more housing, however, I am completely opposed to Option 3, principally on the</p>

grounds of biodiversity and protecting the local flora and fauna. In particular, I completely condemn the idea of Micheldever Station New Town. Imposing a new town of 8,000+ houses on the local area seems preposterous and would do untold harm to the habitats here.

Hampshire's chalk streams are renowned the world over and provide unique habitats that support incredible biodiversity. This has been more evident to me than ever having spent the last year working almost entirely from home in the hamlet of Weston Colley, a few hundred yards from the edge of the proposed New Town. What will happen to the River Dever, its water flow and to all the wildlife that are part of this precious ecosystem? I have regularly been amazed by what I've seen over the last twelve months from kingfishers to hedgehogs. I cannot believe that building an entirely new town at the expense of the local flora and fauna is consistent with your environmental goals.

Furthermore, the level of new infrastructure - roads, infrastructure etc - required for an entirely new settlement will also massively increase the carbon impact of such a project. The location of the Dever Valley should be given special consideration, especially in relation to its position between Basingstoke and Winchester as the last bastion of pristine countryside.

To my mind the only option in keeping with your ideals must be Option 2. ie Building on brownfield sites.

I have concerns about Option 4 because of the extent of developments and where these are located. However, I would like to find out more as it really is very hard to find the facts and maps on your website, which is leaving my feeling very uncomfortable. Please could you direct me to where I can find the best map of all the different options? My main message for now is the strong believe that Option 3 would be an environmental catastrophe that we would not be able to recover from. Once the Dever's biodiversity is lost, it is lost for ever.

E190	<p>Having reviewed the headings and sections of the YPYP consultation document, I cannot comment under any category. Hence this email.</p> <p>It is widely acknowledged that the national planning system is simply not working. Developers have the money to legally challenge planning decisions and when they claim to be solving the housing quota requirement with major developments, they actually drag their feet on completing the scheme in order to keep market prices high. Carla Homes is a good example where they are making abysmally slow progress on Barton Farm for this very reason.</p> <p>Unfortunately, the alternative, to simply rely on brown field site development will not deliver sufficient volume to meet central government targets, or indeed the real housing needs. Additionally, more brown-field development just promotes overdevelopment with oppressive packing densities which will inevitably cause all the usual issues of overcrowding which the world has seen for hundreds of years such as crime, disease, social conflict, etc. Brown-field development is not sustainable in the long term. Our aged infrastructure of sewers and surface water drainage: our water, gas and electricity distribution networks all have a finite capacity. The western side of Chilbolton Avenue from Sarum road to Stockbridge road had just 24 homes 20 years ago, with an average occupancy of 4 people, making under 100 in total. Now there are more than 150 dwellings. With the same occupancy assumptions, that's more than 600 people in total, just one side of one street. Then look at The Valley in Stanmore with intensive packing density planned. Shoe horning more homes into settlement boundaries created decades ago is simply not sensible. Clearly it cannot go on.</p> <p>The next worst type of development is non-brownfield but on the edge of, or adjacent to settlement boundaries. These have the disadvantage of gobbling up our green spaces, surrounding towns and cities but just like brownfield, depending heavily on existing infrastructures and facilities. They result in more traffic, more people movements of all kinds and congested streets and open spaces of the parent town or city. These are often large scale developments with big developers who will drag out progress to ensure the market price stays as high as possible.</p> <p>So, whether we like it or not, the solution therefore is new towns in the countryside, geographically placed to ensure any satellite effect on other nearby towns is spread across more than one, preferably three or more. They should be built with their own infrastructure and community facilities including council housing and there should be industrial/commercial areas to provide employment opportunities.</p>
------	---

CPRE continue to push for strict bans on development in the countryside, seeking to preserve green space, all green space regardless of context or requirements but does this really reflect how we should aim to live?

We have less than 6% of the UK actually built upon according to the BBC website. Quote: More than half of the UK land area is farmland (fields, orchards etc), just over a third might be termed natural or semi-natural (moors, heathland, natural grassland etc), a little under 6% is built on (roads, buildings, airports, quarries etc) and 2.5% is green urban (parks, gardens, golf courses, sports pitches etc). And, if anyone needs that figure confirmed, I suggest that one clicks on Google Maps and then selects the "Satellite View", then ask yourself what colour you see. From an aircraft one gets a more vivid look but I'll save you the trouble here and tell you it's all green: Thousands and thousands of square miles of it. Green rural land as far as the eye can see in all directions. Yes, one can spot the urban conurbations of Winchester, Basingstoke and Southampton but mostly, it is virgin, green land so why are we continuing to hem ourselves in and restrict ourselves to existing settlement boundaries?

Now let me be clear here, I am not suggesting that we build all over it. We do need to maintain green rural separation between conurbations and we also need to preserve areas of outstanding natural beauty and not all green space is suitable to build on, such as flood plains. But, it has been suggested many times that the UK could solve its housing crisis and provide enough housing for the next 50 years by building on just 2% more than we currently do. Take another look at that Google Earth picture. Do you think you could see the difference if I were to colour in an extra 2% of that picture with a redbrick pencil? No of course not.

So the only long term sustainable solution is the "New Town" or Major Development Areas and big corporate developers. To get the value out of these schemes in achieving our housing targets, we will need to place legally binding time frame quotas within each scheme, forcing developers to deliver set numbers of completed dwellings to given time scales. The potential effect of this will be to lower market house prices within a given scheme. Push this too far and that will potentially put off the developers in proposing such developments in the first place, so the time frame quotas will need to be carefully assessed to achieve a balance.

E192	<p>I'm a resident In Micheldever, SO21 3AJ.</p> <p>Came to my knowledge that there is a new local plan for development of 14,000 dwelling in Micheldever station area.</p> <p>I oppose to Option 3.</p> <p>The development of this plan will destroy the immense natural life that we come in contact with, the deers, the rabbits, the birds of prey etc.</p> <p>We go for walks with our dog every day and every day we discover more natural beauty, every day we appreciate the nature and the natural environment we live in.</p> <p>The plan is the worst environmental option for accommodating Winchester housing needs.</p> <p>At your disposal for further clarification.</p>
E193	<p>I am writing to say that, I am a Winchester District resident.</p> <p>I do not support new towns in the countryside and I greatly oppose option 3.</p> <p>By allowing building in the countryside I feel we will lose so much of our wildlife habitat.</p> <p>The increased car use would cause more air pollution and I feel that the traffic would increase through Micheldever itself.</p> <p>Trusting you will make the right choice.</p>

E195	<p>I am a resident of Micheldever Station and am therefore a resident of Winchester District. I am writing in response to the strategic issues and priorities consultation and in particular the proposed plans for a New Town at Micheldever Station. I write to provide my view that I oppose Option 3 and do not support new towns in the Countryside and in particular a new town in Micheldever Station.</p> <p>Having lived in Micheldever Station for a number of years there is already significant pressure on local resources and amenities which are insufficient for the number of developments that have already been built in the village to-date. New towns need new infrastructure including roads, schools, electricity/gas, water, sewage and other carbon heavy services. There is also a need for health care facilities, bus and transport links and additional amenities at the train station. Building these has major adverse implications for the environment and the Council's carbon neutrality commitment. Additional housing should be built where these amenities already exist in and around the city of Winchester (or Basingstoke) where new building has already been established. New towns encourage car use and their layouts often work against walking and cycling. Even those near public transport invariably end up as car-dependent developments. It is highly unlikely that those living in the new town will commute by train. The majority will continue to drive as indeed is the case currently with those living in the new developments within Micheldever Station driving to work/schools instead of taking the train.</p> <p>2. Building on brownfield and previously developed land has a much lower impact on the environment. Building on countryside degrades biodiversity by destroying and fragmenting habitats and causing noise, air and light pollution. How is it suitable to surround a national forest (Blackwood) with a new town? The current lockdown has taught us about the importance of being able to escape from towns into green spaces for our mental wellbeing. For most of us gardens and green spaces have been our saviour. If green spaces are now being turned into towns this goes against this important community need.</p> <p>3. Green fields provide critical benefits such as water, food, flood control, leisure and carbon capture and storage. The disturbance caused by construction releases huge amounts of stored carbon into the atmosphere. Green fields are hugely important to people's health and mental wellbeing, another Council priority.</p> <p>4. With massive and growing development on our doorstep at Basingstoke, it is crucial that the area around Micheldever Station remains as a green buffer if we are to avoid urban sprawl between Basingstoke and Winchester.</p>
------	---

	<p>I hope you will take into account the views of local residents when considering next steps. Micheldever Station has already lived through the environmental impact of a number of new build developments within the village.</p>
<p>E196</p>	<p>I am a Winchester DC resident and I am also writing this on behalf of my wife as well. We wish to object in the strongest possible terms to the possibility of a new town at Micheldever Station for the following reasons:</p> <ul style="list-style-type: none"> <li>• A huge number of houses are being built south of Basingstoke on green field sites and, if Micheldever New Town is approved, one of the very last green spaces between London and the south coast along the M3 corridor will be lost for ever.</li> <li>• Following the pandemic, space in the centre of Winchester previously occupied by retail should be developed for affordable housing and housing for the elderly because:             <ul style="list-style-type: none"> <li>o all the support services are readily to hand</li> <li>o it will reduce the need for car travel which damages the environment</li> </ul> </li> <li>• For environmental reasons, brown field sites should be developed before building on prime agricultural land</li> <li>• Given WCC's commitment to green policies, a new town at Micheldever Station would be incredibly detrimental to the environment because:             <ul style="list-style-type: none"> <li>o new roads, sewage &amp; water and many other facilities would have to be built to support the new houses taking up even more agricultural land than just the new homes</li> <li>o it would destroy natural habitats</li> <li>o it would result in a very large increase in rural traffic, damaging the rural environment even further</li> </ul> </li> </ul>

E197	<p>Please register this email as strongly felt opposition to Option 3.</p> <p>Please guard against the ruin of valuable countryside and this district's character and history in particular.</p> <p>I cannot support new towns in the countryside. The environmental impact of building on greenfield sites must be taken into account more than it ever has been in the past as we increasingly see the largely irreversible impact of giving environmental concerns insufficient priority in the past. Even an eco new town remains a tautology.</p> <p>We need to consider more carefully the impact of greenfield site building on the character of our country in general. Each step, such as brownfield site building being given better support, contributing to the end result we all need. This is especially important to an area like this where the rural nature of the area and its history is vital to its character and economy, not just to look at the environment concerns.</p>
------	---

E199	<p>As a resident of the Winchester District, I would like to put forward my objection to the proposed New Town development at Micheldever Station under Option 3 of the new Local Plan for Winchester.</p> <p>The plan is to build in approximately 8300 houses on 1350 acres of ancient and beautiful Hampshire countryside and thus destroying an area of green fields with a town the size of Romsey or Petersfield. This would have catastrophic consequences for the environment and would destroy prime habitat forever.</p> <p>There are already vast areas of housing developments being built to the South West of Basingstoke and there is a real danger of Winchester joining up with Basingstoke in one big urban sprawl.</p> <p>We are fortunate enough in our County to be home to a rich variety of wildlife such as Red Kites, Pipestrelle Bats, Badgers and many species of rare birds which would be decimated with the pollution, noise and destruction of this development.</p> <p>I understand there is a need for housing and there is a demand for affordable housing in the area, but destroying green countryside with 8300 houses and all the infrastructure these new dwellings would need, would have a major impact on the environment and goes against the carbon neutral commitments the Council has pledged to abide by.</p> <p>I implore you to reject this plan of action and seek other options that do not have such a devastating effect on Hampshire's countryside.</p>
------	---

E217	<p>I am a Winchester District resident, and I would like to submit by objection to Option 3 as I do not support new towns being built in the countryside.</p> <p>Firstly, this is not a brownfield area. The sheer infrastructure this option would require (countless roads, water, sewage, electricity, health care, schools, not to mention the houses themselves) have severe implications on the environment and this does surely not support the Council's commitment to carbon neutrality? We desperately need this green buffer between Winchester and Basingstoke to maintain biodiversity and ecological abundance- so this option is clearly the worst environmental option. No amount of offsetting (such as planting trees to counter act the build) will ever be enough, as it has been proven these habitats are never as diverse or support as much life.</p> <p>Furthermore, as well as the negative environmental impact, this new build will have a huge personal impact on our community and the mental wellbeing of many. Throughout the last year I have been WFH and having access to these green spaces for fresh air, quiet contemplation and many walks and runs has kept myself and partner going. It quite simply has been a lifeline to myself and I cannot stress this enough. I see many other locals and visitors not only enjoying, but also taking pride and care of these green spaces. This will be destroyed with this option. And as a Council you will ultimately be contributing to significant mental unwellness of the people you are supposed to represent and support, how can you justify this?</p>
------	--

E223	<p>I am writing to raise my concerns regarding the construction of Micheldever new town, as outlined in Option 3 of the new Local Plan.</p> <p>Option 3 would destroy the communities we live in and ravage more than 1300 acres of countryside.</p> <p>I would also draw you attention to the following six points:</p> <ol style="list-style-type: none"><li>1. New towns need new roads, schools, health care, electricity, water, sewage and other carbon heavy services. Building these has major adverse implications for the environment and the Council's carbon neutrality commitment.</li><li>2. Building on brownfield and previously developed land has a much lower impact on the environment.</li><li>3. Building on countryside degrades biodiversity by destroying and fragmenting habitats and causing noise, air and light pollution.</li><li>4. Green fields provide critical benefits such as water, food, flood control, leisure and carbon capture and storage. The disturbance caused by construction releases huge amounts of stored carbon into the atmosphere. And green fields are hugely important to people's health and mental wellbeing, another Council priority.</li><li>5. New towns encourage car use and their layouts often work against walking and cycling. Even those near public transport invariably end up as car-dependent developments.</li><li>6. With massive and growing development on our doorstep at Basingstoke, it is crucial that this area remains as a green buffer if we are to avoid urban sprawl between Basingstoke and Winchester.</li></ol>
------	---

<p>E226</p>	<p>I would like to register my Opposition to Option 3, when there are so many other better options to build the required number of houses. We should NOT at anytime be contemplating building new towns in the countryside where you are having to start from scratch to build the required infrastructure and facilities, we should be looking to extending existing towns as they are currently doing in Basingstoke with the extension of Hatch Warren and eventually Basingstoke Golf course. We should be looking at doing the same in Winchester and utilizing Brown Field sites.</p> <p>With changing weather patterns Global Warming and the expectation we will get even more extreme rain fall, we should be taking action to protect the environment not taking detrimental action. We already suffer with flooding issues under the A303 at Micheldever Station which is taking Thousands of pounds to rectify. It would seem that all councils struggle with maintain the existing environment and road structure as shown is extreme rainfall the roads around Winchester and Basingstoke always flood, as did Winchester town itself recently.</p> <p>We need to protect our Environment and our countryside not bring more damage to it that building new towns in the wrong location would do.</p>
<p>E241</p>	<p>Having looked at the local plan i am emailing to say I do not support new towns in the countryside and i oppose Option 3 as set out in this consultation. I think you should build on brownfield and previously built on land first. I oppose you building a new town at Micheldever Station. It would be environmentally disasterous.</p>

E247	<p>As a Winchester District resident, I am writing in response to Winchester City Council's Local Plan. I strongly OBJECT to the building of new towns in the countryside and as such I OBJECT to OPTION 3 of the plan for the following reasons:</p> <ol style="list-style-type: none"><li>1. I favour building on brownfield or previously developed sites and I do not support the building of new towns in open countryside.</li><li>2. As a farmer myself, I greatly appreciate the need to maintain productive farm land to support domestic production. This proposal will impact some of the most productive agricultural land in the County.</li><li>3. Development in what is open countryside will have an adverse effect on the biodiversity and ecology of the landscape at a time when great efforts are being made to reverse the decline in wildlife habitat.</li><li>4. The local road network is already close to capacity and whilst the proposed development is centred around a station, the reality is that car use will continue to be the primary form of transport adding to pollution and congestion.</li><li>5. In the 35 years I have lived at Norton, we have seen a large increase in traffic flows on the A303 between Andover and Basingstoke, and in particular in the last 5 years which has been as a result of the new developments and commuting traffic from within these. Any further development in this area cannot be supported.</li></ol> <p>I strongly urge the Council to REJECT Option 3 and instead seek more sustainable brownfield solutions.</p>
------	--

E257	<p>I feel that we are being constantly bombarded by new applications for new developments, new towns and the accompanying necessity for power, transport links, water, incinerators etc.</p> <p>The Micheldever site is largely unspoilt agricultural land and should remain so in order that we can feed the population and provide important green space for general wellness and exercise.</p> <p>It seems a short hop for a new town to become a conurbation, creeping towards Winchester and Basingstoke and all will be lost to a sprawling area such as Farnham, Farnborough and Aldershot.</p> <p>I OBJECT to the plan to build a new town in this area and strongly recommend building better homes that people would actually choose to live in with solar panels automatically installed on brownfield or already developed areas. I am shocked to drive past so many new houses and buildings without solar panels and other environmentally friendly designs which is so needed nowadays.</p> <p>The south of England is already too busy. The roads are atrocious and introducing thousands more cars onto these roads would be horrendous. The A and B roads have constant traffic which causes people to use the lanes which are totally unsuitable for the volume of cars, lorries and vans at speeds at which people drive.</p> <p>If new developments are anticipated schools, surgeries and hospitals should be built first and not after the new owners have arrived.</p> <p>Town centres could be revitalised into living and commercial spaces and made to look attractive with green areas.</p> <p>Keep the Hampshire countryside. No new towns.</p>
------	--

E263	<p>I'm interested in commenting on the Winchester Local Plan which is currently out for consultation but found it difficult to directly comment on a specific area so I thought the easiest way was simply to email direct. Please let me know if there is a better way of commenting.</p> <p>I am in the process of taking ownership of a piece of land at Durley in the Greenwood Woodland close to Greenwood Lane. There are a number of areas which have been put forward as potential housing development sites nearby.</p> <p>Sites like Greenwood are becoming a rarity as we lose more and more of our countryside to housing. I specifically bought the woodland to increase the natural capital and biodiversity of the plot. Sadly this woodland is isolated from other woodlands with no wildlife corridors leading to and from other areas, but the surrounding agricultural area serves to protect the woodland from the erosion and damage which often comes from being in the centre of a highly developed area.</p> <p>I understand that a number of houses need to be built in the area but the agricultural land which abuts the woodland really needs to be protected in order to preserve the woodland as an amenity for people (it is crossed by two footpaths) and also an amenity for local wildlife. By surrounding the woodland with a 'donut' of undeveloped land there is an obvious environmental benefit for the woodland - which contains an area of ancient woodland and is an area of nature conservation. All of this is rare - comparable woodlands are a number of miles away - and there is an opportunity here to allow housing but also protect the local environment and allow people and wildlife to co-exist.</p> <p>It may even be possible to use what I am proposing as a protection barrier to improve the area for wildlife as part of a mitigation for the large number of houses which are proposed, with some access for newly resident local people which would then leave the woodland better protected. I have attached a map to indicate the areas I'm suggesting.</p>
------	--

<p>E271</p>	<p>I have overheard public discussion associated with an article in the Hampshire Independant issue 440 dated 26th March 2021.</p> <p>The report states a team of volunteers from CPRE Hampshire have established that 5000 new homes are proposed on countryside and green space land which qualifies as 'Valued Landscape' which requires it to be protected.</p> <p>I have engaged family and friends which includes a person who purchases land for investment and associated development.</p> <p>In conjunction with my voluntary work on Parliamentary Reviews and for the Hampshire Police and Crime Commissioner Office, I feel duty bound to ask if 'brown envelopes' are still part of the process?</p> <p>Certainly there is a serious public concern that Parties could be in Cahoots with each other where Valued Landscape joins the Dodo Club aka once its gone its gone.</p> <p>I withold my personal sentiments other than to make the point as a Royal Navy Veteran that we must work together to save our Countryside.</p>
<p>E272</p>	<p>I am writing to you today to object to building a new town in Micheldever. In fact I object to building new towns in the countryside, on beautiful green sites. I object to option 3!</p> <p>Using a site which is rich habitat for all kinds of wildlife is no different than destroying the Amazon.</p> <p>I have lived in Winchester all my life and visit the 'Bluebell woods' every spring along with many others.</p> <p>DONT destroying our countryside!</p>
<p>E288</p>	<p>I am writing to strongly oppose the above development.</p> <p>I am an Oliver's Battery resident who enjoys the peace &amp; tranquility this area affords. The thought of 5000 houses being built in this area horrifies me.</p> <p>I feel brownfield and previously developed land should be developed in the first instance. At this time the city centre should be re developed to include housing and challenge the decline in retail before you consider using</p>

	<p>green belt land.</p> <p>Take a walk down Port Lane, admire the birds &amp; tranquility and please don't develop this land.</p>
<p>E295</p>	<p>I am a resident of Micheldever village and very disappointed to find that Winchester Council are considering developing the site around Micheldever Sation.</p> <p>The area is of natural beauty and already has seen an increase of traffic in the surrounding albeit whilst we are in lockdown. I dread to think what it will be like once we come out of lockdown and this is already without a new area being built on.</p> <p>The surrounding fields provide a balance to the carbon foot print that Winchester and surrounding areas produce. They also provide a free and natural area everyone can enjoy, which contributes to balance the health and wellbeing surrounding community reducing the strain on the NHS limited resources.</p> <p>The areas of south Basingstoke are already being built on and is increasing on what is an already busy area - this taking away the natural eco system that surrounds the area.</p> <p>I therefore ask that you reject the planning in the area of Micheldever Station and look at other sites more suitable.</p>

<p>E343</p>	<p>Regarding the Local Plan, our comments are as follows:</p> <p>5. PAGE 26. "Duty to consult." Unless it is danger of falling down, the tree owner is the best judge of what needs to be done to a tree, very often planted by them in the first place. This would add yet more unnecessary bureaucracy at considerable cost to council tax payers.</p> <p>6. PAGE 27. Third para. Has WCC not realised that we have left the EU? Does the UK "Habitats Regulation Assessment" still apply re SPA's etc? Last para. Does not Godsfield Industrialisation proposal occupy just such a "Settlement Gap?"</p> <p>7. PAGE 29. First para. Very good idea to allow local communities to identify and protect green areas that are of particular importance to them (para 100 of NPPF refers)</p>
<p>E350</p>	<p>As a resident of Waltham Chase, I feel compelled to write with regards to our open space.</p> <p>Understanding that the council is currently consulting on 'Strategic Issues and Priorities' I want to make my feelings known.</p> <p>I would like that the land at Five Oaks Farm, Shedfield, SO32 2HS to be designated as a Local Green Space in the Winchester District Local Plan 2018-2038, because I believe it has beauty, historic significance, recreational value, tranquillity, and rich wildlife and is an important settlement gap to the communities of Shedfield Parish.</p> <p>I walk the public footpaths around this sire daily with my dog and I am well placed to judge its merit.</p> <p>The Skylarks are a joy to behold in the summer and the space is live giving. Please, please visit it yourself, take a walk along the paths and feel the benefit yourselves.</p>

E618	<p>I have read about the recent consultation for Micheldever village and wanted to raise my objection to building houses on a green field site. There are many better options like converting current sites/ brownfield sites and increasing housing in towns with empty units (incl Winchester centre which has a desperate need for improvement).</p> <p>The Barton Farm project HCC greenlighted does not give anyone any faith that developers will look after the precious landscape they will destroy to build on, or build sympathetically for locals or the people who will live in the small, boxy, no-garden living spaces the Council sign off for development.</p> <p>Please protect our green spaces and work to improve what we have, rather than destroy greenfield sites.</p>
------	---

E647	<p>I am writing to strongly oppose the plans to build over 8,000 houses at Micheldever.</p> <p>Building this proposed “new town” would destroy swathes of green belt land, trees, farmland and be an environmental disaster.</p> <p>I already see new houses springing up everywhere where there used to be fields in the area. The huge housing development at Kings Barton and over the other side of town near Badger Farm. We also now have the big warehouses being built near Kempshot in Basingstoke, clearing more green fields, not to mention all the houses that have been built there! Although not covered by Winchester council, for us residents that live in North Hampshire, lots more new houses have been being built near us for quite some time, which equals lots more people and lots more traffic.</p> <p>I regularly walk around the fields in Micheldever Station, it is amazing when I see hares, yellowhammers and deer. Hares and yellowhammer birds are protected and this must surely be a consideration. There will always be another company wanting to earn a quick buck to develop more land, but once these green fields are gone they are gone forever!</p> <p>I moved here for peace and tranquility, because of the green fields, wildlife and open space, if I wanted to live in town I would have stayed in town. How is it right that this development is being considered on this scale, when Winchester has already built so many new houses in the area?</p> <p>I hope you listen to the residents who already live here and I also I want to speak up for the wildlife, the habitat of which you will be destroying if this development goes ahead, that can't speak up for themselves.</p> <p>Winchester is regularly voted one of the best places to live in the UK. If Winchester and Basingstoke eventually merge into one with the development of this “new town” in the middle, I feel sure that Winchester will loose it's character and charm and this won't only affect local residents in Micheldever but ALL those who reside in Winchester.</p> <p>Please do the right thing and say NO to this huge unwanted and unwelcome proposal.</p>

E835	<p>I would like to emphasise the need to consider protection of the incredible ecosystems and ecology of our rivers and the habitats that are an integral part of the catchment.</p> <p>There is great focus on planning and net zero but I can't see much weight being placed on our natural systems. Protection of these are vital to achieve net zero. These areas are hugely vulnerable and under great pressure from a multitude of factors including commercial and residential discharge and the volume of people accessing the rural areas. This latter point it to be encouraged, but needs to be managed in a way that supports rather than degrades the natural world people want see.</p>

E1055	<p>I am writing on behalf of my client, Hallam Land Management Limited, who are promoting the future development of land at Denmead for new housing and associated uses. Enclosed to this email is the consultation response, and accompanying plans, to the Strategic Issues and Priorities consultation for Winchester District Council. The land concerned is shown on the Plans and has been subject to submissions previously in response to the Strategic Housing Land Availability Assessment.</p> <p>Document attached to email -</p> <p>I am writing on behalf of my client, Hallam Land Management Limited, who are promoting the future development of land at Denmead for new housing and associated uses. The land concerned is shown on the Plan attached and has been subject to submissions previously in response to the Strategic Housing Land Availability Assessment.</p> <p>We welcome the opportunity to comment on the Council's current consultation concerning Strategic Issues and Priorities. We have set out our response on the basis of a number of themes corresponding to the Issues identified in the consultation document.</p>

<p>Issue 1: Carbon Neutrality.</p> <p>The Sustainable Development Objectives listed on page 12 of the consultation document are unobjectionable and provide a sound basis to contribute towards the NPPF aims in this regard and the United Nations Sustainable Development Goals.</p> <p>These objectives will be relevant to a number of the land use considerations in the new Local Plan. It is especially important to recognise the three dimensions of sustainable development; too often new development is simply characterised as unsustainable, whereas, in fact, growth and development for social and economic purposes is fundamental to ensure thriving and successful communities. Ensuring that an appropriate and adequate supply of new homes to meet the needs of the current and future generations is a fundamental requirement. If the Plan fails to ensure this, there will be adverse social and economic outcomes.</p> <p>Whilst we recognise that the District has set an ambition to be carbon neutral by 2030, this must be seen in the context of the Government's Nationally Declared Contributions arising from the Paris Agreement, set out in the Climate Change Act (as amended in 2019) and its statutory obligation to achieve zero net carbon emissions by 2050. This will require both reduction in carbon emissions from human activity, and increased carbon sequestration in order to off set residual emissions.</p> <p>As such, the location of new development, and the ability to reduce the amount of travel, is a key land use consideration in these terms; this is likely to lead to a strategy that has particular regard to the proximity of new development to a range of facilities and services and main settlements both within and adjoining the District.</p> <p>Also relevant is the environmental performance of new development. Central to this are proposed amendments to the Building Regulations (Part L) which concern energy conservation. In its Response to the Future Homes Standard consultation published earlier this year the Government indicated its intention to amend the Building Regulations in 2022 and 2025, in order to require reductions in carbon emissions from new homes of 31% and 75% respectively.</p> <p>Achieving these reductions over this time period will require particular changes to the environmental performance of new dwellings with associated new technologies. These are considerations that extend beyond planning policy to construction supply chains.</p> <p>Issue 2: Biodiversity and the Natural Environment</p> <p>Protecting and enhancing the District's Biodiversity and Natural Environment are important principles. Such objectives do not preclude new development but rather require consideration of appropriate locations and sites and design responses that respond positively to accommodating new development alongside green infrastructure enhancements. The Government's long-awaited Environment Bill will mandate particular</p>
---

	<p>requirements of new development in this regard.  Elsewhere we have seen suggestions that planning policies should exceed the net-gain requirements to be set out in the Environment Act when this is enacted. This raises a particular issue that the Local Plan would have the statutory weight of Section 38(6) which could conflict with the statutory weight of another Act of Parliament. This requires careful consideration.  Issue 3: Homes for All  We note that, by reference to the Standard Method in the NPPF, the housing requirement for the District would be 14,000 new homes over a 20-year period (700dpa). This compares to the requirement of 12,500 in the current Local Plan and the average annual number of completions between 2011 and 2019 of 470dpa.  It is clear that there will need to be a step change in housing completions over the period of the new Local Plan and this will require sufficient housing land to be identified for this purpose. This is an important consideration for the spatial strategy to ensure that this increase in housing can be provided in a timely fashion.  The consultation document considers various spatial options; whilst each performs somewhat differently, it is particularly noticeable how Option 4 which directs additional development to the market towns/rural areas is beneficial in terms of widening housing choice and strengthening local centres.  When this Option considers the proximity of those settlements relative to the main urban areas within and adjoining the District it also affords significant accessibility advantages. A location such as Denmead which is close to Waterlooville is particularly well placed in these terms. A hybrid option which affords a priority to Winchester Town and then weighs distribution of the market towns and rural areas focused to those settlements close to the established urban areas within and adjoining the District, will be advantageous.  Given the nature and characteristics of the District and the need to improve housing supply, in considering new allocations a balance needs to be struck in favour of small and medium sites rather than a single focus on a strategic allocation (option 3).  We do not support the designation of a new Green Belt at the present time. This would require exceptional circumstances to justify this and an assessment of its relative merits and dis-benefits would need to be undertaken at a sub-regional level in the context of future and long term development needs that exist at that wider spatial geography.</p>

E1199	<p>I sent my response to the Local Plan to this address yesterday 12th April at 19.38 - well before the midnight deadline, but have received the following message from the System Administrator. Consequently I am sending it again the hope that you will accept it.</p> <p>Although I am a member of the City of Winchester Trust, I was not a member of the team that that prepared the Trust's response. However, I have read it through a number of times and fully support its contents. It would be pointless for me to repeat all the points in my own words but I would like you to count my support as a personal response.</p>

	<p>I would like to add two attachments to elaborate further on two aspects of the Trust's response.</p> <p>1. BIODIVERSITY AND THE NATURAL ENVIRONMENT - (CWT Response page 9) - refers to the Trust's well illustrated 2011 publication 'Winchester and its Setting'. I wish to supplement this by adding an older and longer publication of the same name, the study and report published in 1998. It is too long to attach, but is available on the WCC website. However, as a quicker reference I attach a copy of its concluding section, which also explains who commissioned it and by whom it was prepared. As an independently produced document by an eminent firm of planning experts, it is still relevant; especially in relation to the Trust's Further comments (CWT Response page 12) concerning the essential role of the landscape setting in creating Winchester's international importance as a unique historic City.</p> <p>2. HOMES FOR ALL.-(CWT Response page 14) - refers to the desirability of increasing the density of suburban areas, which applies to both existing and new developments. In this connection I wish to draw your attention to the report by the Policy Exchange titled Strong Suburbs, (if you are not already familiar with it.). As a brief reference I attach a recent article from Building Design, which refers to the Policy Exchange report. The low density of suburbs is a 20thC aberration which is regrettably being repeated in this century (as at Barton Farm), although now recognised as both land wasteful and unsustainable for other reasons. I hope that reference to the Report may be included in the Local Plan to provide guidance for new developments and the means of more successfully increasing the density of existing wherever possible.</p> <p>Also in this connection, I remember when I came to live in Winchester in 1967, that a number of major employers provided homes in the City for their employees, and wonder if there is any way in which this could be encouraged in future.</p>

E1236	<p>Network Rail welcomes the opportunity to comment on this important consultation and would like to be kept informed on any future updated on the Local Plan.</p> <p>Network Rail are in support of the Councils priorities, particularly the need for sustainable transport promotion. We welcome the focus on the need to promote active travel and integration of transport modes, as this aligns with Network Rails views.</p> <p>Network Rail acknowledge the push to have new developments close to railway stations and other transport options to ensure the modal shift and decarbonisation aspirations are met and, of course, Network Rail will continue to work with councils and developers as and when development applications come in to understand how they will impact stations and services in and around the area.</p> <p>Network Rail have several stations within the Local Plan area, one of such is Winchester, which is operated by South Western Rail (SWR). Network Rail would like to see SWR consulted as well.</p> <p>Below we have reflected on some of the Priorities.</p> <p><b>1. CARBON NEUTRALITY</b></p> <p>Consideration needs to be given for a cycle hub or improved cycle parking close to the stations. Provision for better walking routes to / from the station to residential and business areas should also be considered as part of the plans. There is a lot that can be done at stations if funding is available such as use of solar powered lighting in waiting shelters, and rainwater harvesting systems (e.g. collecting rainwater from the drainage in our canopies for flushing toilets) – perhaps introduce water fountains at the station to reduce single use plastics.</p> <p><b>2. BIODIVERSITY AND THE NATURAL ENVIRONMENT</b></p> <p>Calm, green spaces in and around the stations – these should not affect the operational needs of the station but greener areas for passengers to wait, or herb / wildflower gardens to attract bees and butterflies are a lovely addition.</p> <p><b>3. CONSERVING AND ENHANCING THE HISTORIC ENVIRONMENT</b></p> <p>Some of the heritage features could be improved externally and internally at the stations within the district if the funding is available for an improved passenger experience.</p>

	<p>OFFICIAL</p> <p>4. CREATING A VIBRANT ECONOMY Improved sustainable transport links are essential to economic growth – accessible cycling and walking routes to bus and rail services again are very important.</p> <p>5. PROMOTING SUSTAINABLE TRANSPORT As above – good, accessible walking and cycling links, and a cycle hub / parking at the station. The first and last mile of people’s journeys are important in encouraging sustainable transport and linking developments to stations.</p> <p>6. LIVING WELL Calm spaces, accessible walking and cycling routes can improve wellbeing of passengers.</p> <p>Level Crossings As part of Network Rail’s license to operate and manage Britain’s railway infrastructure, Network Rail have the legal duty to protect rail passengers, the public, the railway workforce, and to reduce risk at our level crossings so far as is reasonably practicable. We believe that any future developments and plans should take into consideration the impact on use of these crossings and any resulting increase in risk. This clearly will require early consultation between the planning authority, developers and NR to identify ways that any increase in risk can be mitigated. Network Rails level crossings teams’ welcome further discussions as the plan progresses.</p>

E1245	<p>Cheriton Parish Council: Comments on proposals contained in Winchester Local Plan</p> <p>Carbon Neutrality:</p> <ul style="list-style-type: none"> <li>• Support the principle.</li> <li>• Need for substantial investment programme to incentivise householders to move from hydrocarbon based energy systems to renewable systems. Just focusing on new builds is unlikely to be enough.</li> <li>• Need to be very mindful of impact of carbon offsetting sites on rural communities. Thorough and meaningful</li> </ul>

consultation regarding plans for initiatives such as solar farms, wind farms, hydrogen production, etc., will be required. Such plans should be complimentary to rural environments.

#### Biodiversity and Natural Environment

- Understanding biodiversity in an area like the parish of Cheriton will be essential; decisions (eg roads, new housing developments, increased traffic, large events like Boomtown, etc., should fully determine the impact on species and the natural environment before irrevocable actions are taken).
- Important to reconcile policy and all biodiversity considerations with licensing decisions when considering large events such as Boomtown.
- Important that policies align with neighbouring authorities particularly the National Park.
- For Cheriton the Chalk Stream Conservation (all aspects of flora and fauna) and flooding are particularly important issues. Decisions and actions taken in Winchester impacting on neighbouring communities should be made with full consultation with those communities.

#### Conserving Historic Environment

- We fully support conserving the historic environment; our village is the home to many listed buildings and buildings of historical interest. We observe that retrofitting historic buildings to be more energy efficient can be quite difficult and should, we feel, be less of a priority than more modern buildings that may be easier and cost less and cover a larger majority of houses and families.

#### Homes for all

- Winchester needs to be a good neighbour when making planning decisions, reference impact of the decision to allow the development at Sun Lane, Alresford on increased traffic through Cheriton; leading to Cheriton becoming a “rat run”, especially at peak times.
- Housing need in rural communities is for young people starting out and older people wanting to downsize into smaller properties. Neither is well catered for in Cheriton.
- We support new housing to be dispersed through the community rather than focused in Winchester or creation of new settlements.
- BUT we need to protect sites of environmental importance, especially in the SDNP. Areas such as the River

	<p>Itchen SSSI and its environs, ancient woodland (eg Cheriton Wood), Cheesefoot Head should be given special status to preserve them for future generations.</p> <p>Vibrant Economy</p> <ul style="list-style-type: none"><li>• Need to improve broadband infrastructure in rural communities to enable working from home.</li><li>• Need to protect rural businesses and organisations e.g. village shops, pubs and churches.</li><li>• Promoting buying local and supporting local entrepreneurs is important. Seasonal eating is also a good way to curb the carbon footprint but one would need support from shops/suppliers/farmers and development planners.</li></ul> <p>Sustainable Transport</p> <ul style="list-style-type: none"><li>• Ensure that rural communities are also supported to improve walking and cycling opportunities- Cheriton has fast through roads, including fast cyclists, making walking dangerous.</li><li>• Consider focused rural bus services (eg Cheriton to Alresford and return at sensible times).</li><li>• Need to incentivise moving to electric vehicles.</li></ul> <p>Living Well</p> <ul style="list-style-type: none"><li>• Local councils should find ways to change the high streets to allow for pedestrians only. Planting avenues of trees, have more seating and make it a more friendly with more open space (of course unsociable behaviour would also need to be tackled). This is an opportunity to reduce emissions, improve air quality, noise reduction and safety. Bishops Waltham is a really good example of this as well as Jewry Street in Winchester; Alresford could possibly do something similar. Winchester could improve on their Park &amp; ride system to encourage more people to park outside of the centre. The traffic plans being progressed between Cheriton and the SDNP provide some useful ideas for Cheriton and other villages blighted by traffic. Keeping speed down (less than 20mph) and making village centres less friendly for vehicles is a must as the population in the South East continues to grow.</li><li>• Support in principle the concept of 15 minute city.</li><li>• Support for allotments to enable people to grow their own</li></ul> <p>Infrastructure</p> <ul style="list-style-type: none"><li>• Important to consider infrastructure across boundaries particularly where infrastructure is shared with the National Park.</li></ul>

### Support Green Belt

Respondent ID	Email comments
C19	<p>With reference to the recent and ongoing consultation, I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton. A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the</li> </ul>

	<p>National Park, which would meet local needs and support local communities.</p> <ul style="list-style-type: none"> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped. I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E85	<p>Firstly the local planning draft was very complicated how it was written and presented, for most mortals to understand.</p> <p>The vision of the current plan is not satisfactory and I call on focusing on a new vision, which means delivering sustainable development with achievable objectives.</p> <p>I am disappointed that under homes for all section, the questionnaire only gives options for 4 housing growth options. This is why I suggest a 5th option of focussing on brown field sites, to protect valuable green spaces from being developed, especially in the current climate where need for open green spaces is so important for residents mental and physical health.</p> <p>In addition I would like to address that Royal Down, which I heard about via social media, is a absolute disgrace and would destroy many of the amazing attributes that winchester and the surrounding areas have to offer. (Green not Greed)</p> <p>Email 2 First of all I would like to thank you for giving us opportunity to express my own opinion and make you aware of what for us residents is the most important.</p> <p>The vision in the current Local Plan is not appropriate as as far as I know it was drafted some years ago before the huge impact the COVID-19 and climate change issues has forced upon us.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three areas (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of</p>

previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield which is the most appropriate place to build houses. A large speculative development such as Royaldown and now South Winchester golf course which could be developed by Bloor homes (which, contrary to its own publicity, would be car based and not contribute to sustainable development) should be stopped.

I urge you to take into considerations my views, make option 5 the preferred choice for new sustainable housing and provide a new Green Belt south of Winchester in our new Local plan.

We have a young child who loves the green space we have around us at the bottom end of Oliver's Battery and this space has been invaluable during this tough time, and with the way we live permanently changing, it will prove to be vital moving forward.

E105	<p>As I understand it the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, because it was drafted years before the huge changes which have arisen from the COVID-19 crisis and the effect of lockdowns, also the urgent commitment to tackle climate change and the realisation of the need for open space/ nature/ countryside to support mental health and well being. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of</p>

	<p>the district. Where the homes go is essential to meet the needs of residents across the whole District.</p> <p>Homes for All</p> <p>I am advised that Winchester City Council has presented four options for housing growth, based on three areas (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, it seems these area boundaries are not clearly defined.</p> <p>The four options differ in allocation of housing in these spatial areas; but they don't make best use of previously developed land and they indicate substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton, devastating precious and irreplaceable countryside.</p> <p>Preferable Option</p> <p>A better option would be as follows:-Compliment the existing supply of housing in the District,</p> <ul style="list-style-type: none"><li>- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>-Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life, leading to greater presence on the streets, which would then become safer at night times, especially for women</li><li>-Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>-Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities</li><li>-Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. 	<p>sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E119	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs based on current and likely future conditions. The vision in the current Local Plan is therefore not appropriate, as it was drafted some years ago before the huge changes brought about by COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and, although this is important, it only represents one third of the district. Where new homes are built is critical to meeting the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the South Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p>

	<p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be avoided.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E165	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All  Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. E167	<p>I have lived and worked in Hursley village in the Winchester district since 2005, a beautiful area and great community where my two children went to John Keble primary school, King School Winchester, Peter Symonds College, and now onto University. I am writing to comment on the local plan, an important document to get consensus from all interested parties to plan ahead where to provide homes for current and future needs. It is my strong opinion after reading the current local plan that it isn't relevant for inclusion in the new local plan. This is for a number of reasons, relating from</p> <ul style="list-style-type: none"> <li>• Brexit affecting immigration, prosperity of London and its effect on families moving out of London to live in the M3/Waterloo rail corridor</li> <li>• Change in dynamic of employment with the COVID-19 pandemic and how this will affect where business, their customers, and their employees are co-located</li> <li>• The climate emergency that is taking place in this decade faster than scientists had predicted. For my children aged 20 and 24 this is the number one thing that concerns them, and myself by proxy, ahead of other short term economic initiatives. It is the CND of our age.</li> <li>• The recent sprawl growth in areas like Eastleigh, and more recently Barton Farm, which were promised as solving housing needs but have created traffic problems, crowded schools with long journeys for parents out of</li> </ul>

	<p>district, waiting lists at doctor and dentist surgeries.</p> <p>While the 2030 document focuses on the city centre of Winchester (which is a beautiful place I visit regularly) I believe the document is dated.</p> <p>The dynamic of the centre itself has changed massively with COVID-19 and Brexit challenges. Each time I visit more shops seem to be closed, while some others like cafes are thriving. When the pandemic lockdown is over it's too early to predict what the town centre of 2022 and beyond will look like,</p> <ul style="list-style-type: none"><li>• Will the town need more paved dining areas outside in the high street ?</li><li>• Will it need the current one way system two lane roads like North Walls or St. George's Street to be permanently one lane with wider pavements and cyclepaths ?</li><li>• Will the market need to be permanently in Middle Brook car park,</li><li>• What will Silver Hill post COVID-19 look like with more people shopping on-line and using town for experience trips ?</li><li>• What will the effect of the new Bar End leisure centre have on River Park and people visiting town as part of a gym/swim trip who are now at the other end of town ?</li></ul> <p>Growing up in a city (I am London born) I know how easy it is to think the capital is the centre of everything around it like a solar system's Sun, however Winchester town only represents a portion of the whole district. Many people who live in town do so because the surround areas are so green and accessible, for cyclists, hikers, dog walkers, rambles, and everyone else who comes here to enjoy the beautiful Hampshire countryside from which you can travel along any compass point and be immersed in one of the treasures of the United Kingdom. This is one of the reasons why Winchester gets voted as one of the best places to live so regularly, not because the town is so great but because it is surrounded by such beauty.</p> <p>Winchester city council has presented four options for housing, growth, based on three areas and one strategic allocation with no specific location provided. These area boundaries are not clearly defined on a map so I am puzzled. Each option differs in allocation of housing and most importantly do not make best use of previously developed (aka brownfield) land. It appears to me that they imply a sprawl of Winchester town through Oliver's Battery to Hurley and Compton.</p> <p>I am in favor of a fifth option. This would</p> <ul style="list-style-type: none"><li>• work alongside the existing housing supply (that stands at over 11k homes),</li><li>• use brownfield sites minimizing the need to use greenfield sites and preserve the countryside</li></ul>
--	--

- redevelop and rejuvenate the city center to address the challenge of the shift in how people shop and work from home
- use existing areas in the south Hampshire urban areas closer to the large cities, reducing traffic and avoid more urbanization
- have small developments within market towns and villages that remain in character

Growing up in London I was always inspired by its Green Belt, and this helped to create the boundary between town and country. Were the same to be done here, with a Green Belt covering land to the south west of Winchester town it could help protect the rural parishes (that serve the town and are part of its fabric), it would allow the town to be shaped and crafted within its boundary (something that began with the Romans and is part of the DNA of the city) and it would require developers to consider sympathetic development of previously developed sites making use of infrastructure. Instead of which the lack of this option has allowed developments like Royaldown, a purely speculative dice roll by a farmer who didn't grow up in Hampshire and inherited the land, to tarmac over thousands of years of history for financial profit, creating something that is based on new roads, more cars, and unplanned urban sprawl.

When I visit other cities like Andover or Basingstoke that have their old districts and new development so jarred together I often wonder what small hasty planning decision resulted in the way things became, rather than a measured and valued and public inclusion in the best way forward for how everyone can be part of their future. Planning is the most important thing you do, and I hope you take account of my views and make open 5 the preferred choice for new sustainable housing and also provide a Green Belt south of Winchester in a new Local Plan.

E187	<p>This email is our response to your consultation “Your Place Your Plan” and the provision of Green Belt as part of the proposed new Local Plan.</p> <p>We understand that the function of a Local Plan is to agree how and where to provide homes for current and future needs. The current Local Plan is not appropriate for inclusion within the New Local Plan, as it is out of date and has not kept pace with the Climate Change Agenda nor the impact of the current Covid 19 Pandemic. We would challenge the statistics that are being used to drive the increased housing numbers and seek clarification and justification of these figures, as they drive the scope of the overall housing expansion.</p> <p>The City Council has presented four options for housing growth, based on three spatial areas and one strategic allocation with no specific location. These area boundaries are not clearly defined nor shown on a Map. The four options do not make the best use of previously developed ‘ brownfield’ land and imply substantial growth of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>We would support a 5th Option as being preferable to all four options, as it would :</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing and not create a new massive expansion. Check and justify the statistics of the housing need, to ensure that they are truly representative of the current real picture of need.</li><li>• Use ALL brownfield and previously developed sites across the district, minimising the need to develop precious greenfield land.</li><li>• Redevelop the City Centre to tackle the current post-Covid challenges of declining retail, to include new housing and bring new life into the City. That potential has not been considered in any of the proposed 4 options.</li><li>• Make the strategic Planning decisions that are necessary to develop some areas in South Hampshire urban areas that are close to existing larger city centres along the South Coast. The Winchester Local Plan must be seen in context of the whole of Hampshire.</li><li>• Allow small developments in keeping with the character of the small market towns and villages, including the National Park, which would meet the local needs of smaller communities.</li></ul>
------	---

	<ul style="list-style-type: none"> <li>• Support a Green Belt to restrict the threat of development spread.</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south and south-west of Winchester City and protect the rural parishes of Hursley and Compton and the shape and setting of Winchester. It would stop the urban sprawl and the merging of settlements, thus forcing development onto brownfield and previously developed land - including the Sir John Moore Barracks and the City centre - thus maximising use of existing infrastructure.</p> <p>The large speculative development of Royaldown cannot be allowed to skew the carefully considered (and updated) Local Plan content, as the use of this prime open downland space for a massive car-based development that does not represent any form of sustainable development, is an affront to the values of proper consultation. The use of very large areas of land to the north of the A3090 between Standon and Pitt for a traditional sprawling solar farm to serve the new Royaldown development is a visual affront to a truly beautiful area.</p> <p>“You don’t know what you’ve got till its gone!” Jodi Mitchell</p> <p>We urge you to take account of our views and make the above Option 5 the preferred choice for new truly sustainable housing and also provide a new Green Belt to the south and south-west of Winchester in our updated Local Plan.</p>
E198	<p>In your review I would like the land at Five Oaks Farm, Shedfield, SO32 2HS to be designated as a Local Green Space in the Winchester District Local Plan 2018 – 2038, because I believe it has beauty, historic significance, recreational value, tranquillity and rich wildlife and is an important settlement gap to the communities of Shedfield Parish. Land surrounding the village of Shirrell Heath should also be designated as Local Green Spaces to maintain settlement gaps preventing the merging of the villages and the spread of building in this location thus maintaining tranquillity and richness of wildlife.</p>

C35	<p>First of all I would like to thank you for giving us opportunity to express my own opinion and make you aware of what for us residents is the most important. The vision in the current Local Plan is not appropriate as as far as I know it was drafted some years ago before the huge changes from COVID-19 and climate change issues.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three areas (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton. A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield which is the most appropriate place to build houses. A large speculative development such as Royaldown and now South Winchester golf course which could be developed by Bloor homes (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p>
-----	---

	<p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local</p>
<p>E216</p>	<p>I feel that the new Local Plan should reflect the changes that have come about from Covid 19 and the urgent need to tackle climate change. Whilst recognising the need for new housing, the proposal to build 5,000 new homes etc. between Oliver's Battery and Hursley would run counter to the need to address biodiversity and climate change. Consideration should instead be given to developing brownfield sites and previously developed sites such as Sir John Moore Barracks. Greenfield sites must be protected. The chance to develop city centre sites should also be considered as we see the changing role of these centres. Small developments of market towns and villages should be considered as long as they are in keeping and meet the needs of the local communities.</p> <p>A new Green Belt to cover the area to the south west of Winchester should be the way forward. This would prevent an urban spread which would impact adversely on transport, road infrastructure, pollution and would lead to the loss of important wild habitat. As a resident of Hursley and a keen and regular walker I very much value the countryside around me. I have also noticed a very significant increase in the number of people using and appreciating the wonderful paths and bridleways in this area since the onset of the Covid pandemic.</p> <p>There would be so much to permanently lose if this area were to be subject to a large scale and inappropriate development such as Royaldown. Please take into consideration my views and do consider Option 5 for new and sustainable housing with provision for a new Green Belt south of Winchester in drawing up our new Local Plan.</p>

<p>E222</p>	<p>Please register my objection, that, as a resident of Winchester I DO NOT support new towns being created in the countryside and oppose Option 3 in this consultation.</p> <p>The use of brown field sites with far less impact and stretch on resources, including roads and the greater community are more valuable in this instance.</p> <p>This is the wrong option for the district, our dark night skies, wildlife and eco - green spaces are essential to be kept this way and give breathing space between Winchester and Basingstoke.</p>
<p>E228</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brown field and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> </ul>

	<ul style="list-style-type: none"> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. E229	<p>I write to register my objection to the Micheldever New Town and greatly oppose Option 3.</p> <p>I live in Longparish which is just outside the boarder of Winchester District in the District of Test Valley and I find the proposal of the Micheldever New Town very worrying. We simply cannot continue to develop green spaces in our area as fast as we are or else the urban creep in the south of England will be devastating to our country side. It is vital to protect the green areas and create buffers between towns and cities. There is a lot of evidence out there that suggests the Covid pandemic is a result of humans encroaching on the natural world and we have to put a stop to it. Therefore the green spaces and their biodiversity must be protected even at what might seem a low level - it is simply the thin end of the wedge so we must stop it now. In recent years there has already been a substantial amount of development on the outskirts of Winchester, Basingstoke and Andover to name but a few so how can we justify further green space development?</p> <p>I sincerely hope that you object the proposal in the strongest possible terms.</p>

<p>E240</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. -------------	--

	<p>We urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
<p>E242</p>	<p>My husband, Nick &amp; I being both born in Hampshire, myself in Winchester Hospital, and brought up in Olivers Battery. We are passionate about this County, and have seen many changes since our birth dates, ie 1964 &amp; 1965 respectively. Myself, living Downlands Road, saw the advent of Badgers Farm, where indeed my older brother &amp; family live now. Therefore, we do understand the importance of looking to the future, regarding development, to ensure the children of our generation, and even grand-children, have an option of being able to afford this beautiful area to live in.</p> <p>However, times change, so I am concerned to see your proposal is somewhat dated, and not taking into account these changes that have occurred over the years and decades, eg climate change, rural conservation, pollution, educational &amp; health facilities, current impact on our town center, our villages &amp; transport network, to name but a few. And, there will be further changes to our environment, this year, this next decade, which also must be accounted for to provide homes for our current and future needs to provide sustainable housing.</p> <p>So, whilst you can view from afar, as planners, your plans and (4) options still remain vague to Us, The Residents. Hence after reading much information on this subject, Nick &amp; I agree with The Residents Option of Number 5, which I feel sure you will have read, but to re-iterate;</p> <p>“Homes for All</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> </ul>

- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.”

We urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

<p>E248</p>	<p>The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life and enable social housing to occur in areas with greatest access to facilities and less need for private transport •</li> </ul> <p>Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast, particularly in areas where industry or services have declined leaving large brownfield sites, akin to the Ford plant in Southampton.</p> <ul style="list-style-type: none"> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities, perhaps with a focus on ‘infilling’ between existing properties rather than expansion into greenfield areas.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread and urban sprawl.</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and</p>
-------------	--

	<p>the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan. I recently became aware of investigations on South Winchester Golf Course in preparation for over 1000 houses in the next 10 to 15 years. The suggestions made above also apply to this development; south Winchester needs protection from housing, issues with transport, water use and disposal and likewise with this new potential proposal I do not think it wise on any count.</p>
E249	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. E278	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p>

### Homes for All

Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns & Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E279	<p>Regard to planning applications by bloor homes southern I live in Oliver's battery by its very name an historic land mass green belt farming area its worth preserving for people to enjoy</p> <p>we are lucky enough to to live in a green belt area with protected butterfly fields and walks for every one to enjoy It's no secret that army's have used it in recent history to house its army s before sending many to fight against the enemy forces and die never returning to our beautiful shores My late father and husband both fought for England Dad in Burma with the Chindits and my late husband as a para that dropped at the Pegasus bridge advance force behind enemy lines on d day Both lived their lives with the horrors of the war to give us out freedom from occupation from any oppressor Now we face another threat that of land owners trying to exploit gain at the expense of the common people Winchester does not want its green and pleasant land made into a concrete jungle There are plenty of undeveloped brown field sites dotted in the south of England to full fill the demand for' houses for all "</p> <p>I'm 87 and have bought 4 children up after my husband died in 1972 I was lucky enough to go into retail to sustain our standard of living</p> <p>In the 80 s retail went into decline and I was forced to retire as I could no longer fight the Multinationals rising bank charges rates and lease s Now we find ourselves faced with far bigger threats on line purchasing /banking and dying town centres this i s my view is the future So why not go with the trend develop our historic Winchester with housing not moribund retail premises that line the pockets of conglomerates racking in millions Philip Green of king fisher holdings being a prime example When I went into retail the writing was on the wall Chandlers ford lost most of its independent small owned retail outlets when the super market opened We now have the towns of England a concrete jungle with a few conglomerate s In charge I have a birds eye glimpse of the golf course that is being threatened and use the country lane linking Oliver's battery with Hursley that is also under threat This like school playing fields is a vital part of future leisure activities with the change bought about by COVID</p>

- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E286	<p>The most important function of a Local Plan is to establish how and where to provide homes to meet the needs both current and future, of the local community. The vision of the current Local Plan is unsuitable for forming the basis of the New Local Plan as it was drafted some years ago and inevitably things have changed considerably since then. For example we now have to work through the consequences of the Covid pandemic and the rapidly increasing need to tackle climate change with vigour. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and whilst this is important it only comprises a minority portion of the district. The careful siting of future homes is essential to meeting the needs of the wider community, including the market towns, rural communities and the National Park.</p> <p>Homes for all.</p> <p>WCC has presented 4 options for housing growth, based on three spatial areas: i) Winchester Town, ii) South Hampshire Urban Areas, and iii) Market Towns and Rural Areas, and one strategic allocation with no specific location. However these areas are neither clearly defined nor shown on a map. The 4 options differ in allocation of housing in these spatial areas but they either do not make best use of previously developed land or they imply substantial sprawl of Winchester through Oliver's Battery, Hursley and Compton.</p> <p>An alternative option (Option 5) is preferable to all of the 4 proposed options that would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District,</li><li>• Better use brownfield and previously developed sites across the District, such as the ATR site - Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Recognise the impact Covid has had on the City Centre and allow the redevelopment and refocussing of the City Centre to tackle the decline of city centre retailing. This should include new City Centre homes to breathe new life into the City.</li><li>• Develop some areas in the south Hampshire urban areas closer to the larger centres along the south coast. This is especially important given the potential impact of the Solent Freeport.</li><li>• Allow small developments of a size and scale consistent with the character of the existing market towns and villages including those within the National Park. This would meet local needs and support and strengthen local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread.</li></ul> <p>The Hampshire Green Belt</p>
------	---

	<p>A new Green Belt should cover land to the South West of Winchester and protect both the rural Parishes and landscape as well as the shape and setting of Winchester City itself. It would stop urban sprawl and the merging of distinct settlements, force development onto brownfield sites and previously developed land including Winchester city centre, plus limited "in- keeping" development of existing settlements making maximum use of existing infrastructure. A large speculative development such as "Royaldown" is wholly inappropriate and should not be allowed to progress as it is, despite its best efforts to pretend otherwise, car based and doesn't contribute to sustainable development. The effects of such a development were it to be built would have catastrophic effects on the rural landscape, pollution, local flooding in areas such as Hursley, as well as severe adverse effects on our contribution to tackling Climate Change.</p> <p>I urge you to take my views into consideration and make the option set out above, "the 5th Option" the preferred choice for new sustainable and responsible housing and provide for a new green belt south of Winchester in our new Local Plan.</p>
E287	<p>The purpose of this email is to urge you to reject the proposal to build the development known as Royaldown to the south of Winchester.</p> <p>We need to protect this area rather than carry out a development which will destroy it forever. It is large and excessive urban sprawl. A Green Belt around Winchester would protect the countryside against development and be a preferable option. This is an attractive area which should be protected above the interests of developers.</p>
E292	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped, along with any attempt to develop an estate on the South Winchester Golf course.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
--	--

<p>E293</p>	<p>PLEASE REJECT OPTION 3</p> <p>Please build on brownfield sites before destroying our precious greenfields.</p> <p>Once built on, our nation's Green Belts are lost forever.</p> <p>I am a Winchester resident (31 Monks Road, SO23 7EQ), and I and my family feel very strongly that brownfield sites should be redeveloped into crucial housing / residential use areas.</p> <p>Families and others moving from prosperous urban areas (inc. London, as we did nearly 10 years ago) are drawn to live and invest in Winchester precisely because of its green spaces and unique rural feel.</p> <p>Please act now to spare Winchester becoming 1 huge, unappealing and unhealthy conurbation with Southampton / Romsey / Chandlers Ford / Micheldever / Basingstoke.</p> <p>Please do not destroy the natural environment that we all need for our health, before looking to re-use what we already have; so much 'built on' / partly abandoned brownfield land in and around Winchester could be put to new and more practical uses - for the good of all, and of nature.</p>
<p>E299</p>	<p>The Local Plan needs to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three "spatial areas"</p>

(Winchester Town, South Hampshire Urban Areas, and Market Towns & Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped as would the creating of homes on South Winchester Golf Course which reduces leisure facilities and reduces the attractiveness of Winchester as a place to live.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

<p>E311</p>	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. 	<p>development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E320	<p>The prospect of 5000 new homes being built on a greenfield site between Hursley and Pitt permanently removing agricultural land for ever is disastrous. All the five options in the current planning proposals, seem to have flaws and do not promote building on brownfield sites initially, using imagination to include returning areas in Winchester to domestic use (many offices above the retail property will never be occupied in the future unless they return to their original domestic use), this in turn revitalising the City during the day and the evenings.</p> <p>Recent events show we need our fresh air and countryside and should retain the Winchester City Boundary and not permit extending it to the South. Small developments in the villages should continue to be approved as hitherto, controlled by local people who know their patch.</p> <p>I am avoiding a lengthy message and trust my objection to Royaldown will be noted. Developers have also been surveying SW Golf Course last week to benefit from any relaxation in the laws and the boundaries, and ready to carve up our Hampshire countryside.</p>
E322	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and, although this is important, it only represents one third of the district. residents across the whole District, including our market towns, the National Park and rural communities.

#### Homes for All

Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns & Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new, sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E330	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative</p>
------	--

	<p>development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E333	<p>I am writing to you as a resident of Oliver’s Battery and as someone who has lived in Winchester for over 40 years. I am very concerned about proposals to develop the countryside around the city and particularly in the area south-west of Winchester. I strongly object to the proposed development known as ‘Royaldown’ and also to any housing development on the South Winchester Golf Club site. I hope that you will take my opinions into account in connection with discussion of the new Local Plan.</p> <p>Homes for All</p> <p>I know that one of the key functions of the Local Plan is to agree how and where to provide housing for current and future needs. However I believe that the vision in the current Local Plan is inappropriate for inclusion in the new Plan because it was drafted a few years ago and does not take into account the societal changes resulting from the Covid-19 pandemic nor the Council’s (and government’s) commitment to tackle climate change. Also, the Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is obviously important, it is not representative of the whole district.</p> <p>I realise that more homes are needed for residents across the whole District. In ‘Homes for All’, Winchester City Council has presented four options for housing growth, and one strategic allocation with no specific location. These area boundaries are not clearly defined and nor are they shown on a map. The four options differ in their allocation of housing but in my opinion, either they do not make best use of previously-developed land, or they imply substantial sprawl of Winchester City through Oliver’s Battery to Hursley and Compton. I don’t believe any of these four options is acceptable.</p> <p>A fifth option: to establish a new Hampshire Green Belt</p> <p>There is another option: to establish a new Hampshire Green Belt. I think this would be preferable to the options currently proposed. A Green Belt could take in areas such as Royaldown and the South Winchester Golf Club and it would have the following benefits.</p> <p>It would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District but prevent urban sprawl and the merging of communities.</li> </ul>

	<ul style="list-style-type: none"><li>• Use brownfield and previously-developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land, which would spoil the beautiful and historic setting of the rural communities and of the city.</li><li>• Redevelop the City Centre with new homes to bring new life there, in addition to tackling the challenge of declining retail and in accordance with what a vibrant city needs in the twenty-first century.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments, in keeping with the character of the market towns and villages, including those in the National Park, to meet local needs and support local communities.</li><li>• Ensure that use of the existing infrastructure is maximised.</li><li>• And be the best option to restrict the threat of development spread</li></ul> <p>In conclusion, if this option were to be adopted, an oversized, speculative and unsustainable development such as Royaldown could be stopped and the precious setting which we have all so much enjoyed and benefited from especially in the recent pandemic, would be protected for future generations, whilst there could more sustainable and appropriate housing provision on other sites to meet current and future needs.</p> <p>I hope that you will take account of my views and make this fifth option the preferred choice in our new Local Plan.</p>
--	--

E335	<p>I've chosen to respond to the local plan consultation via letter, as at the outset I must say that the consultation questionnaire is overly complicated and detailed. Almost incomprehensible to anybody outside the circles of the local authority.</p> <p>Homes for All</p> <p>I believe that the most important function of our Local Plan is to agree how and where to provide homes for our current and future needs. The consultation document presents four options for housing growth and of these, Options 1 and 4 are acceptable, Options 2 and 3 are wholly unacceptable. I strongly support the proposal made by the Save South Winchester Group that using previously developed land (their Option 5) would be by far the best option in order to deliver homes required.</p> <p>Rash decision making to build large scale developments, such as 'Royaldown', on greenfield sites would leave a disastrous legacy and permanent degradation of Winchester and the surrounding areas. It would destroy open countryside and agricultural land and effectively merge a number of communities that distinctly give Winchester its character. Not long the day on this tract that Winchester would merge with Chandlers Ford, Eastleigh and Southampton. How can it be consistent with the climate change emergency to concrete over large swathes of agricultural land, blighting panoramic views that for hundreds of years have helped make Winchester what it is? It is the responsibility of the Winchester local authority to protect the historical essence of Winchester and surrounding areas.</p> <p>Hampshire Green Belt</p> <p>I strongly support a new Green Belt for land to the south west of Winchester in order to protect both the rural Parishes and the shape and setting of the city. Incorporating a new Green Belt into the Local Plan would stop large developments, such as 'Royaldown', and the merging of settlements; it would force development onto brownfield and previously developed land and enable limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure, services and community life.</p> <p>Living Well</p> <p>One thing that COVID has highlighted is the need to access open space for recreation, walking, running, cycling etc. The number of people that use the lanes and footpaths between Oliver's Battery, Compton and Hursley for these activities is testament to the need to protect these areas. Winchester's recreational areas are even now inadequate to meet the needs of the population. I have lived in a number of beautiful cities worldwide and their large accessible open spaces differentiates the best from just another urban sprawl. Insufficient and not enough</p>
------	---

bold thought is given to this priority. Just think how London would be viewed today if it didn't have its magnificent parkland and commons or Winchester, without St Catherine's Hill and the Water meadows (by courtesy of Winchester College). What else has been planned for as big open space accessible by Winchester residents since then? Is a concrete sprawl the legacy you wish to leave for future generations?

#### Carbon Neutrality

I strongly disagree that we need to achieve Carbon Neutrality by 2030. This is unrealistic (as 70%+ of responders felt in your Slido poll). It is 20 years earlier than nationally required. It doesn't allow for learning experience or new initiatives and new technology before the next 2036+ Local Plan. It will not allow sufficient time for considered thought and could create 'easy' solutions, but poor decision making, such as covering our countryside in wind and solar farms, to facilitate 'achievement'.

Biodiversity is not served well by solar farms. If these are required to meet Carbon Neutrality, they should not be counted as green space or planned for within areas where they are highly visible i.e. destroying long views or set alongside public footpaths where they would impact on the enjoyment and 'health giving' aspect of the countryside.

E344	<p>I understand that you are currently conducting a consultation called Your Place, Your Plan. I would like to express my views towards this consultation.</p> <p>I understand that the Local Plan is intended to determine how and where to provide homes for current and future needs. The current plan, which was drafted several years ago, has been superseded by time, the impact of COVID 19 and the commitment to tackling Climate Change. Clearly the new Plan must meet the needs of residents across the whole District including our market towns, the National Park and our rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth based on three loosely defined areas, (Winchester City, South Hampshire Urban Areas, Rural Areas) plus one strategic allocation with no specific location. Unfortunately, these areas do not appear to have defined boundaries or to be shown on any published map.</p> <p>The four options do not make best use of previously developed land and imply a substantial infill from Winchester through to Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all four of the WCC proposed areas as follows:</p> <ul style="list-style-type: none"><li>• - It would be compatible with the existing supply of 11,000 homes in the District</li><li>• - It would ensure the exploitation of Brownfield and Previously Developed Sites across the District such as the Sir John Moore Barracks with the critical advantage of minimising the need to develop greenfield land</li><li>• - It would address the accelerating decline of Retail Outlets and promote new life in the City Centre with the provision of new homes</li><li>• - It would focus developments within existing South Hampshire urban areas close to large centres along the South Coast</li><li>• - It would allow small, sensitive development in keeping with the character of market towns and villages, including those in the National Park, which would be designed specifically to meet local needs and support local communities</li><li>• - It would restrict the threat of development spread into greenfield areas and would support the notion of a Green Belt</li></ul>
------	--

	<p>The South Hampshire Green Belt:</p> <p>A new Green Belt, south west of Winchester, is urgently required to stop urban sprawl and merging of villages and rural parishes. Such action would force development onto Brownfield and Previously Developed Land including Winchester City Centre and would enable limited, sensitive development of existing areas which maximises the use of available infrastructure.</p> <p>A large speculative development such as Royal Down, which ultimately will become car based, without providing sustainable development, would be incompatible with and would not even be proposed should the Green Belt be in place.</p> <p>I urge you to take account of my views and to make the alternative Option 5 the preferred choice for new sustainable housing and to include the new Green Belt south of Winchester in the new Local Plan.</p>
E368	<p>We are proud residents of Winchester. Both of us know the area to the south of Winchester very well. Previously my wife, Liz, lived in Chandlers Ford and worked in Winchester in St Pauls General Practice near the station. As a result, she is very familiar with the countryside and the congested country roads in the Chandlers Ford and Hursley area.</p> <p>Clearly one of the most important parts of the new Local Plan concerns the provision of housing for present and future needs. The previous plan was drafted before the changes arising from the COVID-19 Pandemic and the commitment to tackle climate change properly. The location of new homes must meet the needs of residents across the whole district. On p. 39 of 'Your Place Your Plan', looking forward to 2038 the number of houses needed over, and above current housing commitments is 2,692. The suggestions of certain developers, e.g., for Royaldown or Micheldever Market town dwarf this amount.</p>

Winchester City Council has put forward four options for growth in housing. These are located in three ill-defined spatial areas (Winchester Town, South Hampshire, and Market Towns & Rural Area) and one overall allocation.

There is a fifth option which would be preferable to all four of the proposed options. This would:

- Work alongside the existing supply of housing in the District.
- Minimise the need to develop greenfield land by using brownfield and previously developed sites across the district such as the Sir John Moore Barracks and Bushfield Camp.
- Make better use of the City Centre by conversion of retail premises which have become obsolete. The soon to be vacated Debenhams site provides an example of this. Here the upper level could be devoted to housing level and the street level to smaller retail.
- Develop some areas in the south Hampshire urban areas close to the large centres along the South Coast which have the required infrastructure.
- Allow small developments in sympathy with the appearance and nature of market towns and villages.
- Be the best option to support a Green Belt to restrict the threat of generating yet another sprawling conurbation.

The new Green Belt would cover land to the south-west of Winchester Town, thereby protecting both the rural Parishes and the setting of Winchester Town. It would prevent the creeping urban sprawl which has destroyed so much of the character of the South Coast. Furthermore, it would force better use to be made of brownfield and previously use land and would take full advantage use of existing infrastructure. This would put stop to a large speculative development such as Royaldown, which contrary to its own marketing, would be car-based and not contribute to sustainable development. Being car-based it would put further heavy pressure on the roads within and leading to this speculative development.

We urge you to take account of our views and make option 5 the preferred choice for new housing development and establish a new Green Belt south of Winchester in the new local plan.

<p>E389</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. A large speculative</p>
-------------	--

	<p>development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>Royaldown must not be permitted to proceed. A simple look at a map shows the ridiculous extent of the proposed urban protuberance into invaluable historical rural landscapes. Instead of logical brownfield/infill policy, this is catastrophic expansion by psuedopodifiaction.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E399	<p>I understand that you are currently conducting a consultation called Your Place, Your Plan. I would like to express my views towards this consultation.</p> <p>I understand that the Local Plan is intended to determine how and where to provide homes for current and future needs. The current plan, which was drafted several years ago, has been superseded by time, the impact of COVID 19 and the commitment to tackling Climate Change. Clearly the new Plan must meet the needs of residents across the whole District including our market towns, the National Park and our rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth based on three loosely defined areas, (Winchester City, South Hampshire Urban Areas, Rural Areas) plus one strategic allocation with no specific location. Unfortunately, these areas do not appear to have defined boundaries or to be shown on any published map.</p> <p>The four options do not make best use of previously developed land and imply a substantial infill from Winchester through to Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all four of the WCC proposed areas as follows:</p> <ul style="list-style-type: none"> <li>• - It would be compatible with the existing supply of 11,000 homes in the District</li> </ul>

- - It would ensure the exploitation of Brownfield and Previously Developed Sites across the District such as the Sir John Moore Barracks with the critical advantage of minimising the need to develop greenfield land
- - It would address the accelerating decline of Retail Outlets and promote new life in the City Centre with the provision of new homes
- - It would focus developments within existing South Hampshire urban areas close to large centres along the South Coast
- - It would allow small, sensitive development in keeping with the character of market towns and villages, including those in the National Park, which would be designed specifically to meet local needs and support local communities
- - It would restrict the threat of development spread into greenfield areas and would support the notion of a Green Belt

The South Hampshire Green Belt:

A new Green Belt, south west of Winchester, is urgently required to stop urban sprawl and merging of villages and rural parishes. Such action would force development onto Brownfield and Previously Developed Land including Winchester City Centre and would enable limited, sensitive development of existing areas which maximises the use of available infrastructure.

A large speculative development such as Royal Down, which ultimately will become car based, without providing sustainable development, would be incompatible with and would not even be proposed should the Green Belt be in place.

I urge you to take account of my views and to make the alternative Option 5 the preferred choice for new sustainable housing and to include the new Green Belt south of Winchester in the new Local Plan

<p>E454</p>	<p>We are writing with respect to the consultation on the new local plan. We believe that any new local plan must take into account the very significant changes that are likely to arise as a result of the Covid pandemic, including a decrease in the need for commercial and retail space in the City centre. It is too early to know exactly what the extent of the impact will be, but it is worth waiting to see what opportunities for sensitive and sustainable development this could bring before resorting to the further development of green field sites, like Barton Farm and Pitt Manor.</p> <p>We have seen the publicity about the proposed Royaldown development, which includes 5000 homes and a 2000 space park and ride on the green fields between Hursley, Olivers Battery and Compton, where we live. Such a development would be catastrophic for local wildlife and the environment, generating significant additional traffic movements on an already busy road network, and destroy a key amenity for residents and the general character of the area. Once done, it could not be undone. There are much better and greener options for increasing the availability of housing in the area. We completely agree with Steve Brine MP, who said: We will not build back greener and protect our environment by concreting over vast swathes of the Hampshire countryside.</p> <p><b>Homes for All</b> In common with many others, we think that the 4 options for housing growth in the area presented under 'Homes for All' are unsatisfactory. Two of them, in particular, include the risk of large scale development on green field land to the South of Winchester. We therefore urge WCC to consider the preferable and more sustainable 'fifth option'. This would mean:</p> <ul style="list-style-type: none"> <li>Using brownfield and previously developed land first;</li> <li>Redeveloping the City centre to address the decline in retail;</li> <li>Developing areas in South Hampshire close to the Solent free ports;</li> <li>Allowing small development in market towns and villages as appropriate to address local need; and</li> <li>Supporting a green belt to prevent development spread.</li> </ul> <p><b>Green Belt for South Winchester</b> A new green belt to the South of Winchester would protect the local rural parishes as well as the historic shape and setting of Winchester itself. It would stop urban sprawl and the merging of settlements - at its most extreme, the risk of Winchester merging into Chandlers Ford, Eastleigh and Southampton. Development would then be confined to existing brownfield sites or 'in-keeping'/proportionate development of existing settlements, where much of the necessary infrastructure already exists. Speculative developments such as Royaldown would be stopped. We therefore urge you to take account of our views and provide for a new a green belt South of Winchester in the new local plan.</p>
-------------	---

E499	<p>In our opinion, the vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined and we cannot find them on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of residential dwellings to the south west of Winchester through Oliver's Battery to Hursley and Compton, including the land owned by South Winchester Golf Club. The present documents reference HU01 and HU02 make it clear that the owners of that land (the golf club and the agricultural land) have declared the land available for development, not specified when in HU01, but immediately in the case of HU02. The potential number of dwellings totalling 6305 for the two areas. The two areas are scored Green and therefore included in SHELAA 2020.</p> <p>We are of the opinion that this represents a complete disaster for our local area, representing a sprawling ribbon of development through what is clearly lovely green countryside at the present time.</p> <p>A fifth option is preferable to all four of the proposed options and should include the following considerations:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life and enable social housing to occur in areas with greatest access to facilities and less need for private transport</li></ul>
------	---

	<ul style="list-style-type: none"> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast, particularly in areas where industry or services have declined leaving large brownfield sites, such as the Ford plant in Southampton.</li> <li>• Allow small developments in keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities, perhaps with a focus on ‘infilling’ between existing properties rather than expansion into greenfield areas.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread and urban sprawl. This new Hampshire Green Belt would cover land to the south west of Winchester’s urban area and protect both the rural Parishes and the shape and setting of Winchester city. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.</li> </ul> <p>We ask you to propose option 5 in the new SHELAA and to make it the preferred choice for new sustainable housing, and work with all other concerned bodies to establish a new Green Belt south of Winchester.</p>
E503	<p>Cannot sanction this further ‘scarring exercise’ of our diminishing countryside reducing settlement gaps and request this land area is designated as a local Green Space.</p>

<p>E504</p>	<p>We would like to add our protests to the Royaldown proposal.</p> <p>This area of south Winchester is one of the county's most beautiful landscapes and it needs the council's protection. The proposed 5,000 homes will generate 25,000 extra traffic movements every day. Green spaces like this should be excluded automatically from new development.</p> <p>What should be done is to promote brownfield development first with a protective Green Belt. Brownfield and previously developed land should be preferred - areas close to the south coast free ports should be developed, with small development in our market towns and villages to meet local need. The city centre itself should be considered to challenge the decline in retail.</p> <p>No half measure - please throw out the whole proposal!</p>
<p>E528</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All  Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.  A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> </ul>

	<ul style="list-style-type: none"> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E546	<p>We understand the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, a sit was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>The “Homes for All” Winchester City Council has presented are four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one</p>

strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

3 The Hampshire Green Belt A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure.

A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) and should be stopped immediately.

We URGE you to take account of our views and make Option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan. We believe the area surrounding would be damaged by such a large development let alone the impact on roads, nature and noise and of course the Nitrate issue on developments.

E557	<p>Concerning the section Homes for All, I believe that Approach One would be the most desirable as it allocates development between Winchester itself plus the market towns and areas in the south.</p> <p>A carefully planned strategic approach for Winchester itself is crucial to guide development of a number of sites in the city, and to deal with movement &amp; also of open spaces for public use.</p> <p>The designation of more local green spaces is of great importance, and I support the proposal of a new Green Belt to the south of the city.</p> <p>I am totally against the building of any new towns in the area around Winchester. Built on green fields, at present under the cultivation of food vital to our well-being and economy, they would cover the beautiful landscape that is so important to all Wintonians, and are both the lungs of the city and means of relaxation for us all. There is enough capacity for necessary housing development on brownfield sites, and the Sir John Moore barracks are also now available. In the city itself some car parks will also be available, now that we have a low traffic policy for the centre of the city.</p>
E563	<p>Along with many others we believe that the need for homes and associated infrastructure support is a crucial feature of the Local Plan. That the existing Plan requires updating is irrefutable. We believe it should also consider the needs and situation of the entire District and accommodate changes to commerce and climate.</p> <p>Housing</p> <p>The four options for housing growth offered by the Winchester City Council proposals do not make best use of previously developed land and may imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton, for example.</p> <p>A fifth option is suggested which could:</p> <ul style="list-style-type: none"><li>— Fit with existing housing in the District (currently 11,000 homes).</li></ul>

- Use more “brownfield” sites (for example, Sir John Moore Barracks) and reduce the need for costly development of “greenfield” land.
- Redevelop the City Centre to accommodate new homes as well as retail and administrative buildings. In the light of changes to the nature and quantity of city retail this would allow the centre to remain vital and provide opportunities for varied housing needs.
- Exploit possible South Hampshire urban areas close to the south coast.
- Still permit small developments commensurate with the character of market towns and villages, including those in the National Park, meeting local needs.
- Be consistent with a Green Belt proposal which restricts uncontrolled development spread.

#### A Green Belt

A Green Belt over land to the South West of Winchester town could protect both the rural Parishes and the town itself. It would restrict urban sprawl, encourage development of brownfield and previously developed land including Winchester centre, support commensurate development of existing settlements and make maximum use of existing infrastructure.

A large speculative development such as Royaldown, requiring new infrastructure and upgrades to surrounding infrastructure, increasing the use of polluting motorised transport and totally transforming the situation of many communities, would be stopped.

We urge you to take account of our views, make a fifth option along these lines the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E572	<p>I think the most important part of a local plan is to provide a pleasant, environmentally friendly area for residents and to provide homes for our future needs.</p> <p>The vision in the current local plan is not appropriate .</p> <p>There have been huge changes in thought lately advanced by COVID and environmental concerns.</p> <p>The Winchester town forum 2030 focuses on Winchester city centre which represents only a third of the whole area.</p> <p>A fixed Green belt should be placed around Winchester to stop the sprawl of development on greenfield sites. For example Abbots Barton is a sprawling development of boring buildings with no architectural features which does not fit in with the character of Winchester at all or add anything interesting to our beautiful town. Such a development could be placed anywhere in the uk. Moreover these big developments do not include garaging under, or included in, the building and encourage more car use with people driving along the M3 etc to workplaces often not even in Winchester.</p> <p>Brownfield sites must be used first for development.</p> <p>Many areas in Winchester will be available to change to housing now because of shop closures. So will Sir John Moore barracks and even areas of Winnal.</p> <p>Whole areas of low level building around the outskirts of Southampton for example , would benefit from redevelopment.</p> <p>Any provisions for park and ride car parks and lorry or coach facilities for Winchester should be situated right beside the motorway not building more roads across countryside.</p> <p>If more housing is really needed, over and above the hundreds of homes already given planning permission, these should be accommodated in small developments in keeping with their local area and approved by local parish councils.</p> <p>A large scale development like Royaldown would ruin the whole area of Winchester.</p> <p>A sprawling mass of housing , lorry and car parks etc , totally environmentally unfriendly, out of character for the area and showing a real lack of imagination from developers. Please do not let developers take the cheap , easy way and just concrete our countryside.</p> <p>Please take account of my views and choose to protect Winchester and only allow development which fits in with our beautiful area.</p>
------	---

<p>E577</p>	<p>The Local Plan should agree how and where to provide houses.</p> <p>The “5th Option” is preferable as it would:-</p> <ul style="list-style-type: none"> <li>- Work alongside the existing supply of housing in the District</li> <li>- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks,</li> <li>- Develop the City Centre</li> <li>- Develop some areas in the south Hampshire urban areas close the other larger centres along the south coast</li> <li>- Allow small development in keeping with the character of the market towns and villages</li> <li>- Be the best option to support the Green Belt</li> </ul> <p>I ask you to make option 5 the preferred choice</p>
<p>E583</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

At a time when the health of the planet is a priority it is vital to preserve a green ‘lung’ for Winchester, for the wellbeing of its residents and for future generations.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E595	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative</p>
------	--

	<p>development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p> <p>You will be correct in that you have seen the wording of this letter before. I have used the template as I wholeheartedly agree with every point it makes and could not put it better myself. I am not “getting on the bandwagon” – it is my heartfelt belief that to do anything other than Option 5 would be a travesty and will change Winchester and its beautiful rural areas forever. It will become just one big sprawl of houses and will lose much of its charm and appeal to people – both to live here and to visit here. Please do not let it happen.</p>
E605	<p>I am writing to express my views regarding the options currently being considered in particular 'Royaldown' which I do not support.</p> <p>I understand Cllr Jan Warwick has proposed a 5th option comprising :</p> <ul style="list-style-type: none"><li>Utilising brownfield and previously developed land first.</li><li>Redevelop the city centre to challenge the decline in retail, something I believe will accelerate due to the impact of the pandemic on all our lives and habits.</li><li>Develop some areas in South Hampshire close to the South coast free ports</li><li>allow some development in Market towns and villages to meet local needs</li><li>Support maintenance of Green Belt to protect our settlement gaps.</li></ul> <p>This seems a sensible and well thought through option and one that I would support.</p>

<p>E619</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All  Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton and in the process destroy much needed recreational space, vital countryside that it is our responsibility to protect and utterly destroy the character of this area.  A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. 	<p>development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E649	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>* Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>* Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks,</li> </ul>

	<p>minimising the need to develop greenfield land.</p> <ul style="list-style-type: none"> <li>* Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>* Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>* Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>* Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul> <p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p> <p>Please please please do not add any further traffic to Winchester and protect the environment.</p>
E658	<p>I support Harry Johnson-Hill’s suggestion that there should be a fifth option for the land required for new homes in Winchester, i.e. use brownfield and previously developed land first. Redevelop the city centre to challenge the decline in retail. Support a Green Belt to protect our settlement areas.</p>

E677	<p>I reject the option proposed for Royal Down and also the ideas of:</p> <ul style="list-style-type: none"><li>* Extending Winchester's City boundary Southwards</li><li>* New town Settlements</li></ul> <p>I support:</p> <ul style="list-style-type: none"><li>* a green belt for Winchester</li><li>* Building on brownfield sites</li><li>* Infill building in hamlets, villages and towns where appropriate</li><li>* Replacing defunct retail with residential in city centre and outskirts</li><li>* Allowing development of Bushfield Farm</li></ul> <p>It is no good for the council to dream of business rates in Winchester city centre. The die is cast; bricks and mortar retail is in steep decline. This won't change in the foreseeable future.</p>
E685	<p>Royaldown - I do not think the proposal for extensive building on this fine land is sensible. I support the " 5th Option Proposal" to use brownfield and previously developed land first. Redevelop the City Centre and provide homes in vacant shops. Extra housing around Hampshire's new Free Ports. Allow limited development in some small towns and villages and the creation of a Green Belt to protect the unbuilt areas which keep the county beautiful.</p>

E694	<p>I am writing to you in response to your consultation regarding new homes in Winchester, and to object to the Royaldown development proposal. I am not an IT wizard, hence this basic email communication.</p> <p>I have been a Compton Down resident and Winchester City Council Tax payer for more than 20 years.</p> <p>On most days of the year I walk the ancient footpaths between Compton, Hursley and Oliver's Battery, both for exercise and enjoyment of tranquility.</p> <p>I am shocked by the proposed needless destruction of beautiful green Hampshire countryside under the Royaldown proposal.</p> <p>That farmland owned by Hampshire County Council should also be concreted over is madness - post- Brexit transportation problems and the Covid pandemic have re-inforced the need for sustainable farming and local food self-sufficiency.</p> <p>5,000 new homes at Royaldown would generate 25,000 additional daily traffic movements on the already busy road network between Badger Farm Road, Poles Lane and the M3, and lead to gridlocks and chaos on our local roads.</p> <p>I understand that there is pressure on WCC to increase the local stock of housing, but urge you to use brownfield and previously developed land first.</p> <p>The recent news regarding Solent region freeports is exciting, and new housing should be targetted to support the additional jobs that will be created on the Hampshire coast.</p> <p>It is however vital that a continuous conurbation should be avoided, and a protective Green Belt should be established for South Winchester.</p> <p>Limited development could be permitted in market towns and villages to meet local need.</p>
------	--

	<p>Please have the wisdom to block the Royaldown proposal, and be remembered as the Council with the vision to establish a Green Belt for South Winchester.</p>
E702	<p>I support Harry Johnson-Hill's suggestion that there should be a fifth option for the land required for new homes in Winchester, i.e. use brownfield and previously developed land first. Redevelop the city centre to challenge the decline in retail. Support a Green Belt to protect our settlement areas.</p>
E705	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs.</p> <p>Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities now and in the future</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they simply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th more sensible option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Importantly Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, empty shops so to include new homes to bring new life to the city centre.</li> </ul>

- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow smaller developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- This would be a better option to support a Green Belt to restrict the threat of development spread

The infrastructure in Winchester already struggles, increased traffic due to various new build sites such as Winchester Village is far from ideal so stopping an urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure seem more sensible and logical as long term solution for future generations of people living in Winchester

A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped

I robustly urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in the new Local Plan.

<p>E727</p>	<p>As a long-term resident of Hampshire and the district and I am pleased to have an opportunity to be contribute to the formation of the local plan. I must say I found the online form quite daunting and the information attaching quite dense. It was not I think particularly conducive for the average resident to contribute. As a consequence I have decided to send a personal note about the key issues that I believe most relevant</p> <p>Importantly I believe that the central function of a Local Plan is to agree how and where to provide homes for our current and future needs. All the better if it is set in the context of a compelling and resident driven enduring vision for the district. The vision in the current Local Plan is in my opinion not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document (also referred to) only focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>I think that others have come up with a better 5th option which is preferable to all 4 of the current proposed options; it would:</p> <ul style="list-style-type: none"> <li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li> <li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li> <li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li> <li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li> <li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li> <li>• Avoid the need for investment in considerable new infrastructure which would likely restrict affordable housing</li> <li>• Be the best option to support a Green Belt to restrict the threat of development spread</li> </ul>
-------------	--

	<p>The Hampshire Green Belt</p> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E733	<p>I am writing to voice my deep concerns about the four housing options under the “Homes for All” initiative which seeks to develop land around south Winchester. The local open spaces in South Winchester are crucial for the mental and physical well-being of Winchester residents who rely on it, particularly in the recent months of the Covid-19 pandemic, for exercise and leisure. In addition, undeveloped land is vital for important wildlife and ecological systems. The RoyalDown development would irreversibly take these spaces away from residents and wildlife to the detriment of Winchester.</p> <p>The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All  Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map. The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and</p>

Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E736	<p>A Local Plan should agree how and where to provide homes for current and future needs. The vision in the current Local Plan is outdated owing to COVID 19 &amp; the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre which represents one third of the district. Location of homes must meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on any map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they fail make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>* Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>* Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>* Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>* Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>* Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>* Be the best option to support a Green Belt to restrict the threat of development spread</li></ul>

E741	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change.</p> <p>The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton. A 5th option is preferable to all 4 of the proposed options; it would:</p>

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped. I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E745	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. 	<p>development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E774	<p>We wish to object to all four of the housing growth options presented under Homes for All, and would instead support a fifth option, as follows:</p> <p>The use of brownfield and other previously developed land should be a first priority. Parts of the city centre could then be used to provide some housing, which would help to revitalise the retail and hospitality sectors.</p> <p>As there is a proposal to establish south coast free ports, some areas close to these could be developed to provide housing for the potential increase in the workforce.</p> <p>As residents of Hursley, we are totally opposed to the Royaldown development, which would destroy a huge area of countryside and effectively join Hursley village to the city of Winchester.</p> <p>We would fully support the establishment of a Green Belt to the south of Winchester, for the future benefit of all Winchester residents.</p>

E827	<p>An important functions of a Local Plan is to agree how and where to provide homes for current and future needs.</p> <p>Winchester City Council has presented four options for housing growth, based on the three areas of Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) plus one strategic allocation with no specific location.</p> <p>The four options differ in allocation of housing in these areas; but they either do not make best use of previously developed land; or they imply substantial urban sprawl.</p> <p>Another option could make better use of brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land, redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring vibrancy to the centre.</p> <p>It would also be the best option to support a Green Belt to restrict the threat of development spread, which should be created which would cover for example land to the south west of Winchester town and protect both the rural Parishes and also the size and setting of Winchester town, and wherever possible use existing infrastructure.</p> <p>This should not prevent small appropriate developments in keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities. But we should aim to stop urban sprawl and merging of settlements.</p> <p>A large development such as the proposed Royaldown “garden village” are Inappropriate and entirely speculative. It would not only lead to the destruction of large tracts of pristine countryside, with the loss of important community amenities, but contrary to its own publicity, would be car based.</p> <p>I would recommend you to rethink the 4 options to include one with better use of brownfield and existing developed land, and to create a green belt to prevent further urban sprawl.</p>
------	--

C403	<p>Existing brownfield sites should be used for housing together with redundant city and town centre retail sites</p> <p>Hampshire downland is a fantastic local asset and should be preserved. The countryside is a major contributor to wellbeing, biodiversity and carbon neutrality. A new greenbelt South West of Winchester should be promoted by the council to preserve this asset and stop proposals such as Royaldown. A walk through a solar farm or housing estate is rather different than a walk along the existing Monarchs Way or Port Lane . A new road causing increased traffic flow will lead to unwanted types of pollution, traffic congestion and certainly not help biodiversity or carbon neutrality.</p> <p>Residents in Hursley, Compton ,Shawford and Oliver’s Battery would be directly affected by Royaldown Residents in Winchester, Chandlers Ford and other nearby localities are also likely to experience a loss of benefit of an adjacent area of countryside which is within walking or cycling distance.</p> <p>The major benefit of a large development such as Royaldown is for land speculators where agricultural land gets planning permission for housing .</p> <p>A more flexible solution for several smaller developments using existing sites and infrastructure is surely preferable with changing demographic and possibly unknown future political demands for both numbers and geographical spread of houses. The countryside is also recognised as a vital asset for wellbeing with a grateful legacy for future generations.</p>
------	--

<p>E859</p>	<p>I am writing to ask that Hampshire countryside and agricultural land South West of Winchester is considered for Green Belt status.</p> <p>Green Belt status would protect from large scale developments such as the proposed Royaldown. The responsibility to protect hundreds of acres of beautiful green countryside from being demolished by concrete is extremely great. It is important to prevent wildlife habitat, farm land and the experience of greenspace and countryside from being lost forever, depriving future generations.</p> <p>I would ask that development of brownfield sites, previously developed land and city centres be considered for future development. There is no turning back once the countryside has been destroyed.</p>
<p>C588</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. - Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Look into using brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E877	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan was drafted some years ago, before the huge changes from COVID-19, and the commitment to tackle climate change, therefore it is no longer appropriate/fit for purpose.</p> <p>It is also worth being mindful of the very unstable global economic and political situation, the almost unbelievable speed of history; one generation from war to friendship — who can guarantee that the opposite doesn't happen?</p> <p>Land is a non-renewable resource. Once the green fields have been built on, there is no going back! Brexit and climate change threaten the norm and it is expected that greater self-sufficiency and food security will be crucial to our future.</p> <p>The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <p>* Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</p>
------	---

- \* Prioritise brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- \* Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life to the city, leading to new business opportunities, and should provide opportunity for improved visual character, respectful of the historic nature of the city.
- \* Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- \* Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- \* Be the best option to support a Green Belt to restrict the threat of development spread.

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

- \* Green Belt would protect trees, grass and other green vegetation which provide wildlife habitat, prevent soil erosion, absorb air pollutants, and lower surface temperatures. Lack of green spaces leads to higher air temperatures and more ground level ozone, with fewer trees and plants to clean the air and provide oxygen. UK climate projections predict that heat waves are likely to become more intense and more frequent in the future. Without soil to receive the rainfall and filter the water, sewers can become overloaded, potentially causing neighbourhood flooding problems as well as polluted water problems.

	<p>* Green space has a positive impact on mental health. As has been clearly manifested during the pandemic, people living in areas with green spaces are less likely to have anxiety disorders or depression, and they are more likely to be physically active, which leads to reductions in respiratory diseases such as asthma, COPD, and upper respiratory infections. Some studies suggest that green spaces reduce common health conditions including cardiovascular disease, diabetes, and cancer.</p> <p>The truth is: the natural world is changing. And we are totally dependent on that world. It provides our food, water and air. It is the most precious thing we have and we need to defend it.” (Sir David Attenborough)</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town.

It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure.

A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E882	<p>I believe that the most important function of this Local plan is to agree provision of housing for current and future needs, as well as aiming to preserve the green belt south of Winchester.</p> <p>The vision in the current Local Plan was drafted some years prior to the changes seen with COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" however, these area boundaries are not clearly defined or shown on a map.</p> <p>I believe these options either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>Option 3 in particular would take all the countryside between Oliver's Battery, Hursley and Compton, damaging its character, its biodiversity, creating huge additional traffic movements and aggravating existing flood risks in Hursley and Otterbourne.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District (over 11,000 homes.)</li><li>• Use brownfield and previously developed sites across the District, (eg. Sir John Moore Barracks) minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the</li></ul>
------	---

	<p>National Park, which would meet local needs and support local communities.</p> <ul style="list-style-type: none"><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and closing of settlement gaps, thus preserving the unique and beautiful setting of the City. It would force development onto brownfield and previously developed land including Winchester centre making maximum use of existing infrastructure.</p> <p>A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped. The risks to nearby settlements of runoff floodwater, to areas that have struggled in recent years of heavy rainfall would also be avoided if these higher ground areas draining towards the lowlands were not largely covered in housing which necessarily brings with it a substantial loss of permeability in the ground surface.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
--	---

E886	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. It would stop urban sprawl and merging of settlements, force development on to brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E893	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester</p>

Town, South Hampshire Urban Areas, and Market Towns & Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E901	<p>An important functions of a Local Plan is to agree how and where to provide homes for current and future needs.</p> <p>Winchester City Council has presented four options for housing growth, based on the three areas of Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) plus one strategic allocation with no specific location.</p> <p>The four options differ in allocation of housing in these areas; but they either do not make best use of previously developed land; or they imply substantial urban sprawl.</p> <p>Another option could make better use of brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land, redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring vibrancy to the centre.</p> <p>It would also be the best option to support a Green Belt to restrict the threat of development spread, which should be created which would cover for example land to the south west of Winchester town and protect both the rural Parishes and also the size and setting of Winchester town, and wherever possible use existing infrastructure.</p> <p>A large development such as the proposed Royaldown “garden village” are Inappropriate and entirely speculative. It would not only lead to the destruction of large tracts of pristine countryside, with the loss of important community amenities, but contrary to its own publicity, would be car based. Access to Shawford station would only be possible by car and cause many problems of overcrowding for the car park at the station and the surrounding streets of Shawford. The Royaldown brochure is misleading readers to think this is an easy option for trains to London and other areas.</p> <p>I would ask you to take account of my views, consider a Green belt area for the South of Winchester to restrict the threat of development spread and protect local communities who play a vital role in the reason why people see the Winchester region as a really special place to live and work.</p>
------	---

E902	<p>We must agree on how and where to provide homes for our current and future needs. The current Local Plan is not appropriate for inclusion in the new Local Plan, It is out of date and only focuses on Winchester City Centre which only represents part of the district.</p> <p>Your four options for housing growth are ill defined. They make poor use of previously developed land and imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton which will destroy the Winchester area character.</p> <p>You must:-</p> <ul style="list-style-type: none"><li>* Make use of brownfield and previously developed areas such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>* Redevelop the City Centre to tackle the challenges of declining retail and permit change of use of surplus retail facilities.</li><li>* Develop areas in the south Hampshire urban areas close to the larger centres along the south coast, not adding sprawl to Winchester.</li><li>* Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities. i.e. add small numbers of houses in each community and avoid building huge conurbations like Royal Down.</li></ul> <p>A new Green Belt would cover land to the south of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure.</p> <p>Please take account my views and provide for a new Green Belt south of Winchester in our new Local Plan.</p>

The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use Brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E912	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. --	---

E920	<p>As Winchester District residents we wish to raise concerns regarding the Local Plans wrt to Winchester and the surrounding areas. We are concerned that the Winchester Town Forum's 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>We object to the use of rural and greenbelt land for the purpose of more housing without considering better options in the district. Surely the use of brownfield sites ie such as Sir John Moore Barracks,would minimise the need to develop greenfield land. At the same time it makes sense to redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life to the city ( the Debenham's building is one such example)</p> <p>In particular we are concerned that the strategic planning does not define clear boundaries, nor do they define the use of previously developed land as a first point of call. Hampshire includes other urban areas near the south coast which could be developed, and should consider developments which keep the nature of market towns and villages, and support their local needs and communities.</p> <p>We are against further green belt development, whether this is the sprawl of Winchester between Olivers Battery and Compton or, more pertinent to us, the proposal of a massive new town on the farm land by our village- Micheldever Station.</p> <p>We strongly feel that using greenbelt land in this way is the worst environmental option for accomodating Winchester's Housing needs and strongly oppose OPTION 3 of the new local plan.</p> <ol style="list-style-type: none"><li>1. New towns need new roads, schools, health care, electricity, water, sewage and other carbon heavy services. The proposal for the large number of houses in the new town has major adverse implications for the environment and the Council's carbon neutrality commitment.</li><li>2. Building on brownfield and previously developed land has a much lower impact on the environment.</li></ol>
------	---

3. Building on countryside degrades biodiversity by destroying and fragmenting habitats and causing noise, air and light pollution.

4. Green fields provide critical benefits such as water, food, flood control, leisure and carbon capture and storage. The disturbance caused by construction releases huge amounts of stored carbon into the atmosphere. And green fields are hugely important to people's health and mental wellbeing, another Council priority.

5. New towns encourage car use and their layouts often work against walking and cycling. Even those near public transport invariably end up as car-dependent developments. The developers pictures depicting a horse trotting down the street in the new town are ludicrous, particularly in a development of 8000+houses.

6. With massive and growing development on our doorstep at Basingstoke, it is crucial that this area remains as a green buffer if we are to avoid urban sprawl between Basingstoke and Winchester.

We feel that a 5th OPTION of a "Hamphire Green belt is a reasonable consideration".

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not con-tribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustain-able housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E929	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation</p>

with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

The Hampshire Green Belt

A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. Placing County Farm Estate land (HCC) within the Green Belt would support biodiversity and new farm entrants into the farming industry given that Sparsholt Agricultural College sits within our district. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited "in-keeping" development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped. We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

I urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E953	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

I urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E976	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p>

E977	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E978	<p>One of the most important functions of the Local Plan is to agree how and where to provide homes for our current and future needs. 	<p>A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.</p> <p>I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
<p>E1002</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1003	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. A 5th option is preferable to all 4 of the proposed options; it would:

- \* Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- \* Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.
- \* Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- \* Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- \* Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

I strongly believe that a new Green Belt should cover land to the south west of Winchester town. This would protect the rural parishes and the shape and setting of Winchester City by stopping urban sprawl and merging of settlements, and forcing development onto brownfield and previously developed land, including central Winchester (making maximum use of existing infrastructure). A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) makes no sense at all, and would be prevented from even being discussed.

I urge you to take account of my view, and consider an option 5 for new sustainable housing and the provision of a new Green Belt south of Winchester in our new Local Plan.

E1006	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. #### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1010	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities. I do feel that this proposal eats away at much valued countryside which we all need to feel a sense of not being hemmed in by housing and urbanisation, and to preserve a very pretty and important part of the District. Although I would not be in favour of development at Micheldever, their links to the motorway and railway provide offer a more compelling justification to allow development than Royaldown. If this is allowed to go ahead it will further encourage the encroachment of a sort of Solent City into rural Hampshire. I would consider this to be a considerable loss of amenity.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options. It would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p>
-------	---

A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could be limited to “in-keeping” development of existing settlements, making maximum use of existing infrastructure. The notion of a large speculative ribbon development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be excluded.

#### Water Sourcing and Supply

While it appears that sustainability issues around water sourcing and supply are regarded as beyond the purview of certain aspects of planning, it would seem logical to insist that any part of an organisation entitled 'Strategic Planning Department' should take account of the precarious situation we find in Hampshire with regard to water supply under current demand. The chalk aquifer, that is the source of nearly all water supplies in Hampshire and surroundings, is now regularly depleted through over abstraction to the extent that the precious chalk streams and rivers in the area are suffering seriously reduced flows and/or periods of drying. This process of depletion is set to destroy the delicate ecology of the Meon, Itchen and Test catchments and the surrounding countryside. Therefore, before any significant development is considered, it should be a 'boiler plate precondition' that strategic development of the water supply infrastructure is undertaken for alternative water supply through the building/commissioning of reservoirs and re-treatment or de-salination plants.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1026	I wish to oppose extension of the boundary of Winchester City to the south and to support a green belt to protect settlements gaps.
E1029	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. E1052	<p>As a member of the general public with no experience in complicated planning matters, I am compelled to comment on the content and design of the Winchester District Local Plan consultation process. Whilst I understand that this is your chosen method of consulting on the strategic issues and priorities for the new local plan, I must stress that this is an extremely difficult platform to navigate and accurately reflect my views through the design of the questions. I consider myself a reasonably literate person and have spent a great deal of time trying to unpack the lengthy process but have finally decided to send you an email response instead. Undoubtedly, there will be ordinary members of the public who will be unable to express their opinions and be overwhelmed by the whole process. This is far from a fair democratic process in action.</p>

I sincerely hope the below will count as an official response.

It is my belief that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and WCC's commitment to tackle climate change. The plan outlines too many objectives, some lacking in consistency and many are written in such subjective terms that measuring progress of completion will be challenging, if not impossible.

The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre which only represents one third of the district. Where homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.

Housing need

Winchester City Council has presented four options for housing growth, based on 3 'spatial areas' - Winchester Town, South Hampshire Urban Areas, and Market Towns & Rural Area - and one strategic allocation with no specific location. It is virtually impossible to understand these area boundaries as they are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas. They either do not make best use of previously developed land or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton. In the plan introduction, you make reference to the plan 'being prepared with the climate emergency at the centre of our thinking'. It is at this point that I must mention the large speculative development called Royaldown which is the very epitome of 'urban sprawl' through some of Hampshire's finest landscape. Contrary to Royaldown's own publicity, it is a car-based community and would not contribute to the very subjective term 'sustainable development'. Quite the opposite in fact as it would lay down vast areas of concrete, create urban sprawl and be totally contrary to the fact that you have the climate emergency at the centre of your thinking. Additionally, I fail to see how Royaldown contributes in any way to the Council's ambition for the wider district to become carbon neutral by 2030 - just 9 years away.

None of the 4 proposed options are acceptable. A 5th option is preferable as it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, minimising or better halting the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the South Hampshire urban areas, close to the larger centres with existing infrastructure along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread.

#### A Hampshire Green Belt

My suggestion is that a new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester City centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in a new Local Plan.

E1059	<p>I have been a resident in the Winchester area since birth (1966) and a resident of Compton Down for the vast majority of my childhood and adult life. There have been significant changes over the years but, generally, the ‘integrity’ of Compton Down and the local villages, has been maintained. This is now under significant threat, to the considerable detriment of all Winchester residents.</p> <p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li></ul>
-------	--

- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contra ry to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1061	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>The Hampshire Green Belt</p>
-------	---

	<p>A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contra ry to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan</p>
<p>E1063</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. The four options differ in allocation of housing in these spatial areas; however they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt could cover land to the south west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt could cover land to the south and west of Winchester town and protect both the rural parishes and the shape and setting of Winchester City. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including central Winchester. It could limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1076	<p>I would like to submit my comments regarding the new Local Plan currently under consultation and specifically regarding the 4 options under “Homes for All”. Please note that the Local Plan should consider the commitment to tackle climate change as a priority focus and also consider the impacts resulting from the structural changes which will follow the Covid-19 pandemic.</p> <p>Four options to accommodate housing growth have been included in the current draft, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area), which have not been clearly defined. There is also a strategic allocation with no specific location.</p> <p>The four options either do not make best use of previously developed land, or they assume a substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton, which would destroy vital amenities forever.</p> <p>I understand a 5th option has been proposed that would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li><li>• Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.</li><li>• Be the best option to support a Green Belt to restrict the threat of development spread</li></ul> <p>I would therefore like to register my support for this 5th option.</p> <p>A new “Hampshire Green Belt” that covers land to the south west of Winchester would protect both the shape and setting of Winchester town and the rural parishes surrounding it. Green belts have for decades been effective at preventing the urban sprawl that naturally occurs when short term profit is prioritised over long term wellbeing for residents and visitors. I used to live in the USA and have seen for myself what happens when a green belt mechanism or other similar protections are not in place. In many cities there you can drive for 40-50 miles through the same characterless urban sprawl with hardly any wildlife or open space and poorer people are</p>
-------	---

particularly disadvantaged by this. I was struck on my return to the UK many years ago what a precious asset we have in our countryside and have always thought since then that while development is important for all of us, it must be guided in a way that preserves this asset wherever feasible.

The Hampshire Green Belt would correctly force development onto brownfield and previously developed land including Winchester centre. There would also be limited and appropriate development of existing settlements in keeping with their existing character, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which would clearly be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

<p>E1086</p>	<p>We are writing with regard to the proposed South Winchester Development Plan.</p> <p>We are concerned about the impact that this large scale plan would have on the local environment, transport, shops, schools, surgeries and other resources. We think the best way to support the Green Belt, the loss of which would be very detrimental to people living in this area, is to restrict this development spread by supporting option 5.</p> <p>We think it would be better to use brownfield and previously developed sites in the district, such as the Sir John Moor Barracks, and in the city centre to regenerate declining retail.</p> <p>We hope that option 5 would be the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our local plan.</p>
<p>E1087</p>	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.</p>

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1091	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car-based and not contribute to sustainable development) would be stopped.

We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

<p>E1112</p>	<p>My feedback is on two key issues Homes for all and Green Belt for South Winchester.</p> <p>The Badger Farm Road is busy enough already without generating about another 25,000 additional traffic movements and the associated pollution.</p> <p>Option 2 extends the boundary of Winchester City Council to the South.</p> <p>We are in an environmental crisis having lost a great deal of biodiversity over recent decades. Therefore rather than option 3 which promotes new town settlements, I prefer a "5th Option" to promote brownfield development first, along with a protective Green Belt. So I think it would be preferable to use brownfield and previously developed land first. The centre of Winchester could be redeveloped to support retail and help retail to recover. There has been a decline in retail in Winchester City Centre recently exacerbated by the pandemic. Small development could be allowed in market towns and villages to meet local need. This should include affordable homes so that young people can stay and work in market towns and villages. A Green Belt should be supported to protect our settlement gaps. The value of living near green spaces for our physical and mental well-being is now widely accepted.</p>
<p>E1117</p>	<p>We believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum's Winchester 2030 document focuses on Winchester City Centre and although this is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation</p>

with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Be the best option to support a Green Belt to restrict the threat of development spread.

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

We urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.</p> <p>We urge you to take account of our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.</p>
E1157	<p>The most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. The Winchester Town Forum’s Winchester 2030 document focuses on Winchester City Centre and although this</p>

is important, it only represents one third of the district. Where the homes go is essential to meet the needs of residents across the whole District, including our market towns, the National Park and rural communities.

#### Homes for All

Winchester City Council has presented four options for housing growth, based on three “spatial areas” (Winchester Town, South Hampshire Urban Areas, and Market Towns & Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.

The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver’s Battery to Hursley and Compton.

A 5th option is preferable to all 4 of the proposed options; it would:

- Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.
- Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.
- Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.
- Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.
- Allow small developments in-keeping with the character of the market towns and villages, including those in the National Park, which would meet local needs and support local communities.
- Be the best option to support a Green Belt to restrict the threat of development spread

#### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I/we urge you to take account of my/our views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1159	<p>The most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. #### The Hampshire Green Belt

A new Green Belt would cover land to the south west of Winchester town and protect both the rural Parishes and the shape and setting of Winchester town. It would stop urban sprawl and merging of settlements, force development onto brownfield and previously developed land including Winchester centre, plus limited “in-keeping” development of existing settlements, making maximum use of existing infrastructure. A large speculative development such as Royaldown (which, contrary to its own publicity, would be car based and not contribute to sustainable development) would be stopped.

I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

- \* Use brownfield and previously developed land first
- \* Redevelop the City Centre to challenge the decline in retail
- \* Develop some areas in south Hampshire close to the south coast free ports
- \* Allow small development in market towns and villages to meet local need
- \* Support a Green Belt to protect our settlement gaps

E1169	<p>I believe that the most important function of a Local Plan is to agree how and where to provide homes for our current and future needs. The vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, as it was drafted some years ago before the huge changes from COVID-19 and the commitment to tackle climate change. I urge you to take account of my views, make option 5 the preferred choice for new sustainable housing and provide for a new Green Belt south of Winchester in our new Local Plan.

E1176	<p>I am writing to express my concern and oppose the potential, large speculative development such as Royaldown in the Winchester area.</p> <p>Badger Farm and Oliver's Battery are relatively small and unspoilt settlements, that enjoy grey spaces and the nature reserve that are vital for the local community, mental health and wildlife conservation. Royaldown is a huge development that would hugely increase the carbon footprint and would have a devastating ecological impact on the whole region. I believe this is in disagreement with the current political climate (especially in the face of the "climate emergency" as openly supported by the UK government.)</p> <p>I believe that the vision in the current Local Plan is not appropriate for inclusion in the new Local Plan, and I would like to protect the Hampshire Green Belt. So, I strongly oppose any potential development on the scale of Royaldown in this area.</p> <p>Homes for All</p> <p>Winchester City Council has presented four options for housing growth, based on three "spatial areas" (Winchester Town, South Hampshire Urban Areas, and Market Towns &amp; Rural Area) and one strategic allocation with no specific location. However, these area boundaries are not clearly defined or shown on a map.</p> <p>The four options differ in allocation of housing in these spatial areas; but they either do not make best use of previously developed land; or they imply substantial sprawl of Winchester through Oliver's Battery to Hursley and Compton.</p> <p>A 5th option is preferable to all 4 of the proposed options; it would:</p> <ul style="list-style-type: none"><li>• Work alongside the existing supply of housing in the District, which stands at over 11,000 homes.</li><li>• Use brownfield and previously developed sites across the District, such as Sir John Moore Barracks, minimising the need to develop greenfield land.</li><li>• Redevelop the City Centre to tackle the challenges of declining retail, including new homes to bring new life.</li><li>• Develop some areas in the south Hampshire urban areas close to the larger centres along the south coast.</li></ul>
